CHAPTER 1: INTRODUCTION

A natural hazard is a natural occurring event, such as an earthquake or flood that could harm human life and property. Natural hazards pose severe risks to people and property. Such events may cause injuries or deaths, and damage or destroy buildings and infrastructure. People may be displaced from their homes, key services can be disrupted, and the local economy may be affected. While a community cannot fully protect against every potential impact of every hazard, such impacts can be reduced or mitigated. This Local Hazard Mitigation Plan (LHMP, Plan) identifies opportunities to mitigate these impacts and improve resiliency to natural hazards in the City of South Gate.

1.1 Plan Purpose and Mitigation Goals

This Plan helps the City of South Gate become a safer place to live and work by identifying effective and feasible actions to achieve the following mitigation-related public safety goals identified in the General Plan:

1. Enhanced protection of life and property from hazard impacts.
2. Municipal and emergency operations are fully functional during disasters.
3. Strengthened partnerships within the community and throughout the region that enhance hazard mitigation, preparation, response, and recovery capabilities.
4. Educated and empowered community members prepare for, mitigate, respond to, and recover from hazards that affect their family and property.

Plan actions include education and outreach programs; the development of partnerships with businesses, nonprofits, and other government agencies; capital improvements; updates to municipal regulations and practices; and monitoring and reporting activities. This Plan establishes a basis for coordination and collaboration among participating public and private organizations, identifies and prioritizes future mitigation activities and projects, and assists in meeting the requirements of federal assistance programs.

The City prepared this Plan to be consistent with current Federal Emergency Management Agency (FEMA) requirements for hazard mitigation plans and to inform the Safety Element of the City's General Plan.

1.2 Authority

Federal Emergency Management Agency

The Federal Disaster Management Act of 2000 (DMA 2000), Section 322 (a-d), requires that any local government wishing to receive federal disaster mitigation funds have a mitigation plan that accomplishes the following:

- Describes the process for identifying hazards, risks, and vulnerabilities in the community.

- Identifies and prioritizes hazard mitigation activities.
- Encourages the development of local mitigation actions.
- Provides technical support for hazard mitigation efforts.

This Plan meets the requirements identified in DMA 2000 and is consistent with current FEMA hazard mitigation requirements and guidance.

State of California

California Government Code Section 65302.6 (as added by Assembly Bill [AB] 2140) identifies specific components to include in a local mitigation plan:

- An evaluation of the earthquake performance of public facilities that provide critical government functions, shelters, and other essential services.
- An inventory of private facilities that may be hazardous.
- Strategies to reduce the risk from private and government facilities.

In addition, California Government Code Section 8685.9 (also as added by AB 2140) provides for additional disaster funding if a jurisdiction has an adopted mitigation plan as part of its General Plan. This Plan is consistent with Sections 65302.6 and 8685.9, as it is integrated with the Safety Element of the General Plan.

1.3 Plan Adoption

The City of South Gate will adopt the LHMP via a resolution of the City Council following plan approval from FEMA. Figure 1 is the resolution used to adopt the 2017 Local Hazard Mitigation Plan.

Figure 1. City of South Gate 2017 Local Hazard Mitigation Plan Resolution

[A copy of the resolution will be added upon receipt of Approved Pending Adoption Notification from FEMA.]

1.4 Plan Use

Each section of the Plan provides information and resources to assist people in understanding the hazard-related issues facing South Gate residents and businesses. The Plan consists of the following chapters:

- Chapter 1: Introduction. The introduction describes the background and purpose of the LHMP, including the Plan's regulatory authority and a summary of the Plan development process.
- Chapter 2: Community Profile. The community profile summarizes the history, geography, demographics, and development conditions of South Gate. It provides background and additional context for the hazard assessment and mitigation actions.
- Chapter 3: Hazard Profiles. This chapter identifies the types of hazards present in South Gate, their historical occurrence in and around the community, the risks these hazards pose to South Gate, and the vulnerability of critical facilities and infrastructure to hazardous events.
- Chapter 4: Mitigation Actions. This chapter provides policies and strategies to reduce the risks to residents, businesses, and critical facilities and infrastructure from hazardous events. These policies and strategies may include pre-disaster mitigation programs or post-disaster response and recovery activities.
- Chapter 5: Plan Maintenance. This chapter provides information on implementing, monitoring, and evaluating the Plan. It also discusses the assets and capabilities available to implement the policies and strategies in the Mitigation Actions chapter, and provides opportunities for continued public involvement.

1.5 Hazard Mitigation Planning Process

LHMP Team

A variety of stakeholders, including City departments, local agencies, local businesses and landowners, and South Gate residents, came together to inform this Plan, which reflects local values, concerns, and opinions. City staff established the LHMP Team to draft this Plan, which was reviewed and revised through public outreach efforts. Staff from the following City departments and other agencies comprised the LHMP Team:

- City of South Gate Administrative Services Department
- City of South Gate Community Development Department
- City of South Gate Parks & Recreation Department
- City of South Gate Police Department
- City of South Gate Public Works Department
- Los Angeles County Fire Department
- Los Angeles County Office of Emergency Management

The LHMP Team held a kickoff meeting and three additional planning meetings to discuss preparation of this Plan. Team members discussed the Plan objectives, reviewed hazards, and prepared and reviewed mitigation goals and actions. Table 1 presents the results of these meetings. Appendix A provides materials and sign-in sheets from these meetings.

Table 1. LHMP Team Meetings

Meeting Name	Meeting Date	Purpose and Outcomes
Kickoff Meeting	July 14, 2015	Provided an introduction to the project, discussed overarching goals for the effort, discussed communication protocols, and identified points of contact.
LHMP Team Meeting 1	August 12, 2015	Provided an overview of the LHMP process, identified hazards of concern, finalized critical facilities list, and prioritized hazards with LHMP Team members.
LHMP Team Meeting 2	September 16, 2015	Provided an overview of the hazard profiles and preliminary results of the risk assessment for each hazard and critical facility identified. Developed hazard mitigation goals and identified key hazard mitigation actions.
LHMP Team Meeting 3	November 4, 2015	Provided draft hazard mitigation actions for review. Finalized mitigation action table.
Planning Commission Update	April 5, 2016	Staff provided a status update to the Planning Commission regarding the preparation of the LHMP and the General Plan Safety Element. Additional details are provided in Appendix B.

Online Survey

As part of the public engagement and outreach process for the LHMP, the City created an online survey for community members. A link to the survey was placed on the City’s website as well as distributed via City e-mail lists. The survey asked about potential hazards facing South Gate, and what steps community members have taken or are interested in taking to reduce the threat from these hazards. From 143 respondents that participated, the survey produced the following key outcomes:

- Earthquakes, diseases or pests, and drought were the three potential hazards that caused the most concern for community members.
- Only 20 percent of respondents are part of South Gate’s Community Emergency Response Team, but over half of remaining respondents were interested in learning more about joining.
- Although nearly half of the City is in FEMA’s 500-year flood zone, only 27 percent of respondents have flood insurance.

A detailed summary of the online survey is included in Appendix B.

Public/Community Events

The City participated in the South Gate Family Day event that was held on October 24, 2015, at South Gate Park. This event included over 40 booths from which community groups, City departments, and local businesses shared

information, sold goods/services, and educated attendees. The City occupied a booth space to talk about the LHMP and handed out hard copy versions of the online survey to attendees; survey respondents were entered into a raffle drawing for gift cards to local restaurants and three-day emergency backpacks. Through this event, the City received over 60 hard copy surveys in both English and Spanish. The results of these surveys were added to the online survey results compiled in Appendix B.

1.6 Public Review Draft

The City completed and released the public review draft LHMP to the public for review and comment on July 13, 2017 for 30 days. Electronic versions of the document were provided on the City’s website and hard copy versions were provided at City Hall (City Clerk and Planning Departments), Hollydale Library, and the Leland R. Weaver Library.

1.7 Supporting Plans, Studies, and Technical Reports

Multiple plans, studies, technical reports, and other sources of information were used to develop this Plan. Table 2 identifies these sources of information used to develop certain sections.

CHAPTER 2: COMMUNITY PROFILE

2.1 Physical Setting

South Gate is located in southeastern Los Angeles County, approximately 8 miles southeast of downtown Los Angeles, and covers an area slightly more than 7 square miles. It is bordered by the unincorporated community of Walnut Park and the Cities of Huntington Park, Cudahy, and Bell Gardens to the north, the City of Downey to the east, the Cities of Lynwood and Paramount to the south, and the City of Los Angeles and the unincorporated community of Florence-Graham to the east. The Los Angeles River and Interstate 710 (the Long Beach Freeway) run north–south through South Gate in the eastern part of the City, and Interstate 105 (the Century Freeway) runs through a small portion of the City in its extreme southeastern corner. The US Census reported that South Gate had a population of 94,396 in 2010, and 2015 estimates from the state of California put the City population at 96,547. Figure 2 depicts South Gate’s regional location.

South Gate is part of the Gateway Cities region of Los Angeles County. The community is almost entirely developed; vacant land occupies only 1.7 percent (80 acres) of South Gate’s total size. Residential land uses, primarily single-family homes, account for 41 percent (approximately 1,960 acres) of the City.

2.2 History

The area now known as South Gate was originally inhabited by the Tongva (also known as the Gabrieleño) and other Native American peoples, who settled the Los Angeles Basin and the southern Channel Islands. Spanish explorers first entered the region in 1542, but permanent occupation by Europeans would not begin until Mission San Gabriel Arcángel was constructed in 1771 in what is now the City of San Gabriel. In 1810, King Joseph I of Spain granted close to 30,000 acres of the region to Corporal Antonio Maria Lugo as a reward for his military service, forming an estate called Rancho San Antonio. Beginning in 1855, the rancho was split up, and much of it was turned into 40-acre parcels for agriculture. By 1880, cattle ranching took hold in the area. In the early 1900s, residential subdivisions began to replace the cattle ranches. The community became known as Southgate Gardens, due to its position around the southern gate of the former Rancho San Antonio.

Southgate Gardens incorporated in 1923, as the City of South Gate, with a population of approximately 2,500 people. The new City became home to many major industrial companies, including General Motors and Firestone Tires. New developments quickly sprung up in the area to provide housing for factory workers. This history is reflected in the housing stock; the 2010 US Census reports that approximately 82 percent of homes in South Gate were constructed before 1970, and over 30 percent were built during the 1940s.

Figure 2. Regional Vicinity Map

2.3 Community Profile

South Gate had a population of 94,396 people in 2010, according to the US Census. Tables 3, 4, 5, and 6 provide an overview of the City's population, households, ethnicity, and education levels based on the 2010 Census.

Table 3. South Gate Population Data (2010)

Category	Population
Total population	94,396
Male population	46,321
Female population	48,075
Median age	29.4
Elderly population (65+)	6,623

Source: US Census 2010

Table 4. South Gate Household Data (2010)

Category	Population
Number of households	23,838
Number of families	20,833
Average household size	3.97
Average family size	4.24
Number of female householders	5,065
Median household income	\$43,268
Median family income	\$44,986
Median house value	\$376,700
Number of rental households	13,210

Source: US Census 2010

Table 5. South Gate Ethnicity (2010)

Ethnicity	Number	Percent of Population
White (non-Hispanic)	3,209	3.4%
Black or African American	890	0.9%
American Indian and Alaska Native	878	0.9%
Asian	732	0.8%
Native Hawaiian and other Pacific Islander	99	0.1%

Ethnicity	Number	Percent of Population
Other race	40,624	43.0%
Two or more races	3,528	3.7%
Hispanic or Latino (of any race)	89,442	94.8%

Source: US Census 2010

Table 6. South Gate Educational Attainment (2010)

Educational Attainment (Age 25+)	Number	Percent of Population
Less than 9 th grade	17,754	33.2%
9 th grade to 12 th grade	8,381	15.7%
High school graduate	13,912	26.0%
Some college, no degree	7,270	13.6%
Associate degree	2,493	4.7%
Bachelor degree	2,704	5.1%
Graduate or professional degree	896	1.7%

Source: US Census 2010

2.4 Economic Trends

The nature of South Gate’s economy has changed as manufacturing and heavy industry have declined in recent decades. According to the Southern California Association of Governments (SCAG), the education, retail, and manufacturing sectors provide the most jobs in the community (approximately 59 percent, as of 2013). Household median income has decreased since 2010, and as of 2014 was \$40,454 according to SCAG, compared to \$53,125 for all of Los Angeles County. As with much of California, home prices in South Gate peaked around 2006 and 2007 with a median sales price of \$460,000. Due to the collapse of the subprime housing market and the resulting global recession, home sale prices fell significantly, reaching as low as \$230,000 in 2011. Prices have risen as the economy has recovered, and as of 2014 the median home sale price was \$310,000.

Like many smaller communities surrounding major cities, more people commute out of South Gate than commute in. The US Census reports that, as of 2012, 19,285 people who lived in other communities worked in South Gate, while 26,623 South Gate residents worked in other communities. Only 1,648 South Gate residents worked in the City. Among people with jobs in South Gate who lived elsewhere, the largest number came from Los Angeles, Long Beach, Downey, Lynwood, and East Los Angeles. Among South Gate residents who worked elsewhere, the largest numbers went to Los Angeles, Vernon, Long Beach, Downey, and Commerce.

2.5 Existing Land Uses

The South Gate General Plan, which was adopted in 2009 and is the principal policy document regulating land use in the City, identifies nine main types of land uses in the community. Like much of the region, South Gate has gone from a largely agricultural community in its earlier history to a largely built-out urban community. Table 7 shows the current distribution of land uses in South Gate.

Table 7. Current Land Uses In South Gate

Land Use	Acres	Percent of Total	Example
Vacant	80	1.7%	Undeveloped/abandoned land
Civic/Institutional	99	2.1%	Local government buildings, religious facilities
Schools	109	2.3%	Elementary schools, high schools, adult school campuses
Parks	166	3.4%	South Gate Park, Hollydale Regional Park
Commercial	308	6.4%	Retail stores, auto dealers, restaurants, offices
Public Works, Water Bodies, Easements	342	7.1%	Los Angeles River, power lines, flood control channels, railways
Industrial	762	15.9%	Heavy manufacturing, light industry, warehouses
Transportation	968	20.2%	Roads
Residential	1,966	41.0%	Single-family homes, multifamily units, mobile home parks
Total	4,800	100%	

Source: City of South Gate

2.6 Development Trends

Numerous development projects are under way or in the planning stages in the City. Table 8 identifies current development activities in the City.

2.7 Critical Facilities

The project team identified a number of critical facilities in South Gate. These facilities provide important services to the community, such as basic government functions, water and power service, and schools. Some of these facilities can also serve additional roles during an emergency situation, including as a shelter for displaced residents, a staging area for emergency response and recovery activities, or a location for important City administration functions. Damage to these facilities can impair response and recovery operations, and may lead to a disruption of vital services for South Gate residents. The City also identified a number of bridges in the planning area, which may be owned by non-local

government agencies but are included in the risk assessment maps due to their importance. Table 9, Table 10, and Figure 3 show the critical facilities and bridges in South Gate.

Table 8. 2015 Development Activities

Project	Location	Description	Estimated Completion
Tweedy Atlantic Plaza	9918 Atlantic Ave. (SE corner of Tweedy/Atlantic)	Proposed project to convert existing industrial buildings into a neighborhood shopping center with approximately 7 tenants which include Bright Now! Dental, Winchell's, Baskin-Robbins, and Cricket.	Winter 2016
La Aldea	9923 Atlantic Ave. (SW corner of Tweedy/Atlantic)	A proposed 5-story mixed-use project on the formerly occupied site by Adohr Farms. The project will feature 105 market-rate apartments and approximately 35,000 square feet of retail.	Summer 2018
Alta Med (Medical Facility)	8627 Atlantic Ave.	New 2-story, 28,961-SF medical facility, just north of the Azalea Shopping Center. The facility will provide a pharmacy, X-ray accommodations, labs, dental office/exam rooms, and separate areas for sick and well patients, and will accommodate between 150–170 people.	Summer 2017
Chakemco Plaza	10000 Atlantic Ave.	New neighborhood retail center with approximately 5,800 SF of retail. Replacing an existing used truck dealership and will sit adjacent to the new Atlantic/Tweedy retail center.	Fall 2017
7-Eleven	10840 Garfield Ave.	New 2,000-SF 7-Eleven at the NE corner of Garfield Avenue and Imperial Highway.	Summer 2017
Gardendale Condos	5495 Gardendale Ave.	7 condominiums at approximately 1,700 SF each.	Fall 2018
State Apartments	8148 State Street	10 new apartments units at approximately 1,200 SF each.	Summer 2017
Willow Apartments	2742 Firestone Blvd.	7 unit apartment located next to Willow Elementary School.	Fall 2017
Paramount Apartments	SE corner of Golden/Paramount	10 unit apartment project.	Fall 2017
Rincon Taurino	4680 Firestone Blvd.	Tenant improvements to an existing restaurant to include an open patio.	Summer 2017
K-Pac	9415 Burtis Street	New 86,000-SF industrial building with 4,000 SF of office space.	Summer 2017

10	L.A. County Fire Station #54	4867 Southern Place
11	L.A. County Fire Station #57	5720 Gardendale Avenue

Table 10. South Gate Bridges

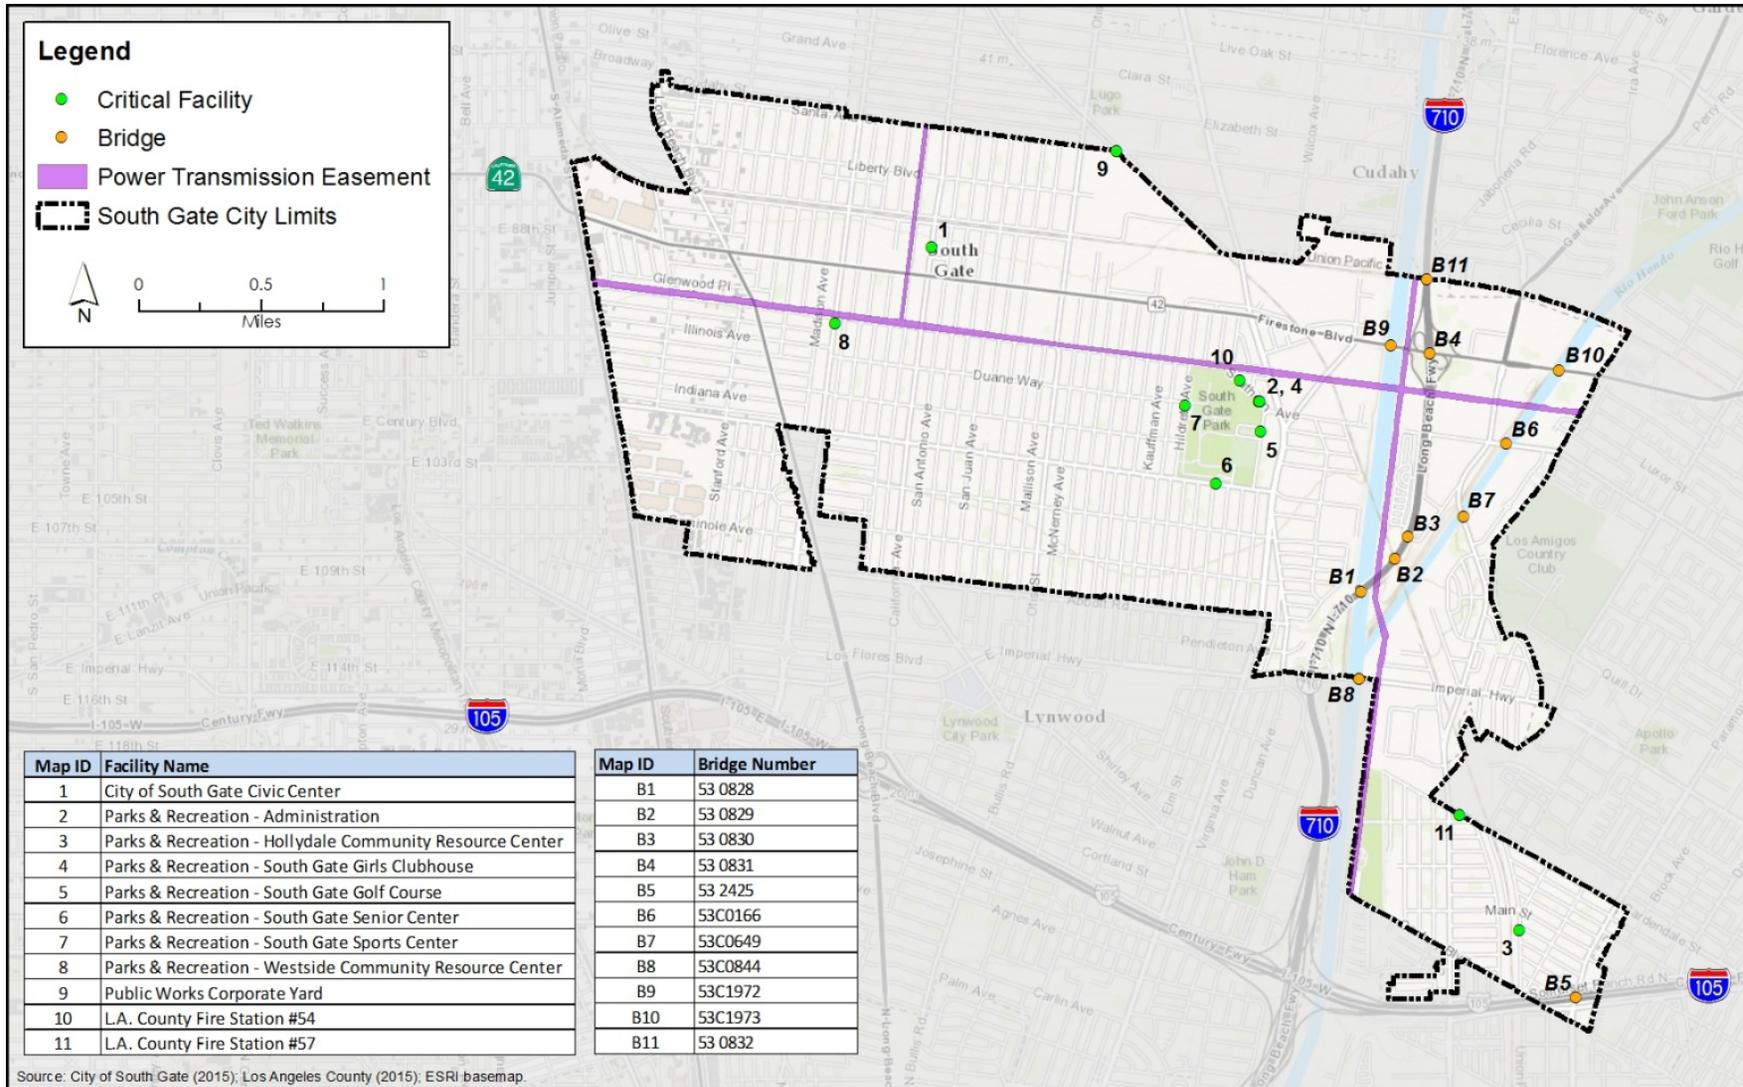

Map Number	Bridge Number
B1	53 0828
B2	53 0829
B3	53 0830
B4	53 0831
B5	53 2425
B6	53C0166
B7	53C0649
B8	53C0844
B9	53C1972
B10	53C1973
B11	53 0832

The City has a number of critical facilities that could be vulnerable to human attacks. In order to maintain safety, the City has removed these confidential facilities from the publicly accessible LHMP. A separate risk assessment has been conducted and is kept by the City under separate file. In addition to the Critical Facilities list, the LHMP Team also identified "Facilities of Concern," which are the schools located in the community. Appendix C provides a detailed list of all nonconfidential facilities identified by the LHMP Team. The risk assessment prepared for this plan is based solely on the facilities listed in Table 9.

2.8 Disaster and Evacuation Routes

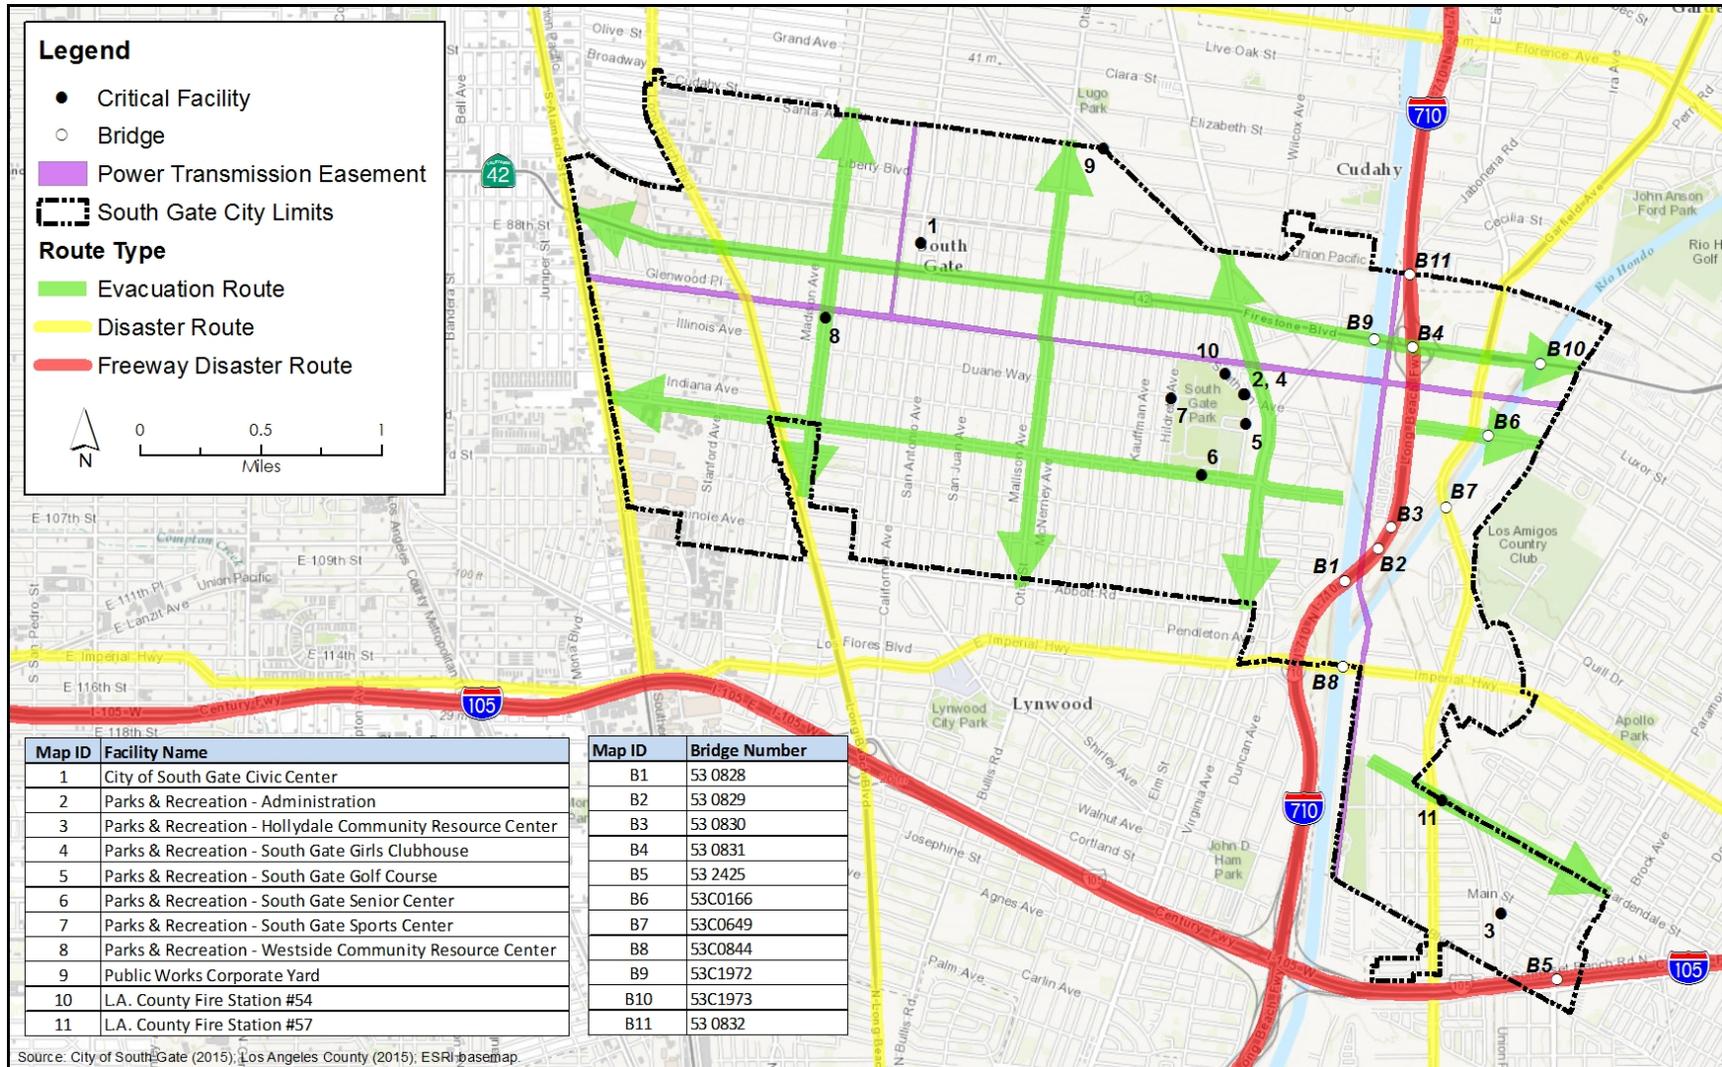

In the event of a significant emergency, clear routes are needed to ensure that emergency responders and supplies can be transported to the disaster and that community members can be evacuated away from the disaster. The County of Los Angeles designates official disaster routes. Disaster routes in or near the planning area include Interstate 710 and 105, as well as Alameda Street, Long Beach Boulevard, Imperial Highway, Garfield Avenue, and Florence Avenue. The City of South Gate designates its own evacuation routes, which include Firestone Boulevard, Tweedy Boulevard, Southern Avenue, Gardendale Street, Atlantic Avenue, Otis Street, and California Avenue. Figure 4 displays these disaster and evacuation routes.

Figure 3. South Gate Critical Facilities and Bridges

There is no content on this page.

Figure 4. South Gate Evacuation Routes

There is no content on this page.

CHAPTER 3: HAZARD PROFILES

3.1 Hazard Identification and Prioritization

Hazard Identification

FEMA identifies 21 different hazards that local governments may wish to consider when conducting hazard mitigation planning efforts. Some of these events effectively cannot occur in South Gate because the community does not have the necessary attributes for these events to occur (avalanches, for example). Other potential hazards may potentially occur in South Gate but the chance of such events is low enough that planning for these occurrences is not an effective use of resources (hurricanes, for example). The LHMP Team discussed a comprehensive list of natural hazards during the kickoff meeting on July 14, 2015. This discussion resulted in identification of the hazards that pose a potential risk to the City of South Gate. Table 11 summarizes the LHMP Team’s discussion for each of the natural hazards and shows which were identified for inclusion in this LHMP. Hazards that have been excluded from further consideration are shaded gray. This table is consistent with the hazards identified as part of FEMA’s hazard mitigation planning guidance.

Table 11. City of South Gate Hazard Identification, 2015

List of Hazards	Include in City LHMP?	Discussion Summary
Dam Failure	Yes	The City is susceptible to inundation caused by dam failure of Garvey, Whittier narrows, and Hansen Dams along the Los Angeles and Rio Hondo Rivers.
Disease and Pest Management	Yes	Trees in the City are susceptible to invasive insects and fungi.
Drought	Yes	The City depends on groundwater and imported surface water, both of which are susceptible to drought.
Seismic Hazards (Ground Shaking and Liquefaction)	Yes	South Gate is susceptible to earthquake ground shaking and liquefaction.
Extreme Heat	Yes	Due to economic considerations and the relative lack of shade trees in parts of the City, the City is vulnerable to extreme heat events.
Flood	Yes	The City has 100- and 500-year flood zones, as mapped by FEMA.
Hailstorm	Yes	Though rare, the City has experienced substantial hail damage in the past. The hazard will be combined with similar hazards and identified as “severe weather.”
Hazardous Materials Spills	Yes	The City contains properties and transportation corridors with the potential for hazardous materials spills.

List of Hazards	Include in City LHMP?	Discussion Summary
Tornado	Yes	Tornados are rare, but have occurred near the City. The hazard will be combined with similar hazards and identified as "severe weather."
Wind	Yes	The City has experienced damage from wind events. The hazard will be combined with similar hazards and identified as "severe weather."
Windstorm	Yes	The City has experienced damage from wind events. The hazard will be combined with similar hazards and identified as "severe weather."
Climate Change	Yes	Climate change is not profiled as a distinct hazard, but rather a phenomenon that could exacerbate hazards. Climate change will be considered as a factor for relevant identified hazards.
Agricultural Pests	No	Not applicable. There is no agriculture in South Gate.
Avalanche	No	Not applicable. The conditions for avalanche are not present in South Gate.
Coastal Erosion/Bluff Failure	No	Not applicable. South Gate is not a coastal community.
Coastal Storm	No	Not applicable. South Gate is not a coastal community.
Expansive Soils	No	Not applicable. There are no expansive soil issues in South Gate.
Hurricane	No	Not applicable. There are no historical or expected occurrences of hurricane in South Gate.
Land Subsidence	No	Not applicable. There are no historical or expected occurrences of subsidence in South Gate.
Landslide and Mudflow	No	Not applicable. The conditions for landslides and mudflows are not present in South Gate.
Human Caused Hazards	No	Except for hazardous materials spills, this plan focuses on natural hazards, per FEMA requirements.
Severe Winter Storm	No	Not applicable. Although severe winter storms do happen in South Gate, their impacts are adequately captured in other hazards reviewed in this plan and do not include those impacts typically associated with winter storms elsewhere in the nation such as snow, blizzards, sleet, etc.
Tsunami	No	Not applicable. South Gate is not a coastal community.
Volcano	No	Not applicable. There are no volcanoes in or near South Gate.
Wildfire	No	Not applicable. South Gate is a built-out urban community, surrounded by built-out urban communities; there are no wildfire risks in the City.
Sea Level Rise	No	Not applicable. South Gate is not a coastal community.

Some of the hazards listed in this plan combine FEMA-identified hazards for organizational purposes. For example, this plan discusses “severe weather,” which includes wind/windstorms, hailstorm, and tornados. City staff identified and prioritized eight hazards that may impact South Gate:

- Drought
- Seismic Hazards
- Extreme Heat
- Hazardous Materials
- Severe Weather
- Flood
- Disease/Pest Management
- Dam Failure

Prioritization

The LHMP Team used a Microsoft Excel-based tool to prioritize the identified hazards by assigning each hazard a ranking based on probability of occurrence and potential impact. These rankings were assigned based on group discussion, knowledge of past occurrences, and familiarity with the City’s infrastructure vulnerabilities. Four criteria were used to establish priority:

- Probability (likelihood of occurrence)
- Location (size of potentially affected area)
- Maximum Probable Extent (Primary Impact, or intensity of damage)
- Secondary Impacts (severity of impacts to community)

A value of 1–4 was assigned for each criterion, with 4 being the most severe and 1 being the least. The four criteria were then weighted based on the LHMP Team’s opinion of each criterion’s importance. Table 12 shows the scores for each criterion.

Table 13 presents the results and includes only those hazards that achieved a “medium” or “high” score. The hazards in Table 13 are consistent with the hazards identified in Table 11. Note that for organizational purposes, hailstorm, wind/windstorm, and tornado have been combined into a single category referred to here as “severe weather.”

Table 12. Hazard Ranking Scores and Weighing Factors

Probability		Maximum Probable Extent (Primary Impact)	
Based on estimated likelihood of occurrence from historical data	Weighing Factor: 2.0	Based on percentage of damage to typical facility in community	Weighing Factor: 0.7
<u>Probability</u>	<u>Score</u>	<u>Impact</u>	<u>Score</u>
Unlikely	1	Weak – little to no damage	1
Occasional	2	Moderate – some damage, loss of service for days	2
Likely	3	Severe – devastating damage, loss of service for months	3
Highly likely	4	Extreme – catastrophic damage, uninhabitable conditions	4

Location		Secondary Impacts	
Based on size of geographical area of community affected by hazard	Weighing Factor: 0.8	Based on estimated secondary impacts to community at large	Weighing Factor: 0.5
<u>Affected Area</u>	<u>Score</u>	<u>Impact</u>	<u>Score</u>
Negligible	1	Negligible – no loss of function, downtime, and/or evacuations	1
Limited	2	Limited – minimal loss of function, downtime, and/or evacuations	2
Significant	3	Moderate – some loss of function, downtime, and/or evacuations	3
Extensive	4	High – major loss of function, downtime, and/or evacuations	4

Table 13. South Gate Hazard Ranking Worksheet Outcomes

Hazard Type	Probability	Impact			Total Weighted Score	Hazard Planning Consideration
		Location	Primary Impact	Secondary Impacts		
Drought	4	4	4	4	64.00	High
Seismic Hazards	4	4	4	4	64.00	High
Extreme Heat	4	4	3	2	50.40	High
Hazardous Materials	3	4	3	4	43.80	High
Severe Weather	3	4	3	4	43.80	High
Flood	3	2	3	4	34.20	Medium
Disease/Pest Management	4	2	1	2	26.40	Medium
Dam Failure	1	4	3	4	14.60	Medium

3.2 Climate Change Considerations

Climate change is expected to exacerbate existing hazards in the City. As such, the LHMP Team determined that it would be best to discuss climate change considerations throughout all applicable hazard profiles. To address potential climate change impacts, the City has identified climate change considerations in each hazard profile. This discussion is intended to supplement, but not replace, the “Risk of Future Hazards” discussion.

3.3 Vulnerability/Risk Assessment Method

The critical facilities listed in Section 2.7 were mapped in GIS and overlaid with mapped hazard areas to determine which assets are located within each hazard area. Hazard area and critical facility overlays were conducted for seismic hazards (liquefaction), hazardous materials, flood, and dam failure.

Hazard and critical facility overlays were not conducted for drought, extreme heat, severe storms, or disease/pest management. These hazards affect the entire City and therefore all facilities listed in the critical facility inventory could be potentially susceptible to damage from them.

Each hazard profile in the following section includes a Vulnerability/Risk Assessment section that presents the results of the method described above. Replacement and contents values for the facilities that fall within the hazard areas are tallied in each vulnerability table to estimate the total potential losses to each facility. It should be noted that the actual losses will depend on the type and extent of the hazard event.

3.4 Hazard Profiles

Drought

Hazard Description

A drought is a long-term shortage of water, usually caused by extended periods with little or no precipitation. Unlike the other emergencies discussed here, droughts develop over a lengthy period of time. It generally takes multiple dry years to develop a drought, and similarly it can take multiple wet years to alleviate one. In urban areas, drought conditions can cause a decrease in available water supplies, which may lead to increases in water rates or restrictions in water use. Communities may need to seek alternative water supplies to meet demand, which can be a costly and lengthy process. Vegetation, including street trees and landscaped areas in public parks, can become water stressed if it is not adapted to drought conditions, which may result in plant disease or death.

There are multiple scales for measuring the severity of droughts. The US Drought Monitor Classification Scheme combines many of these scales into a single index, shown in Table 14.

Table 14. US Drought Monitor Classification Scheme

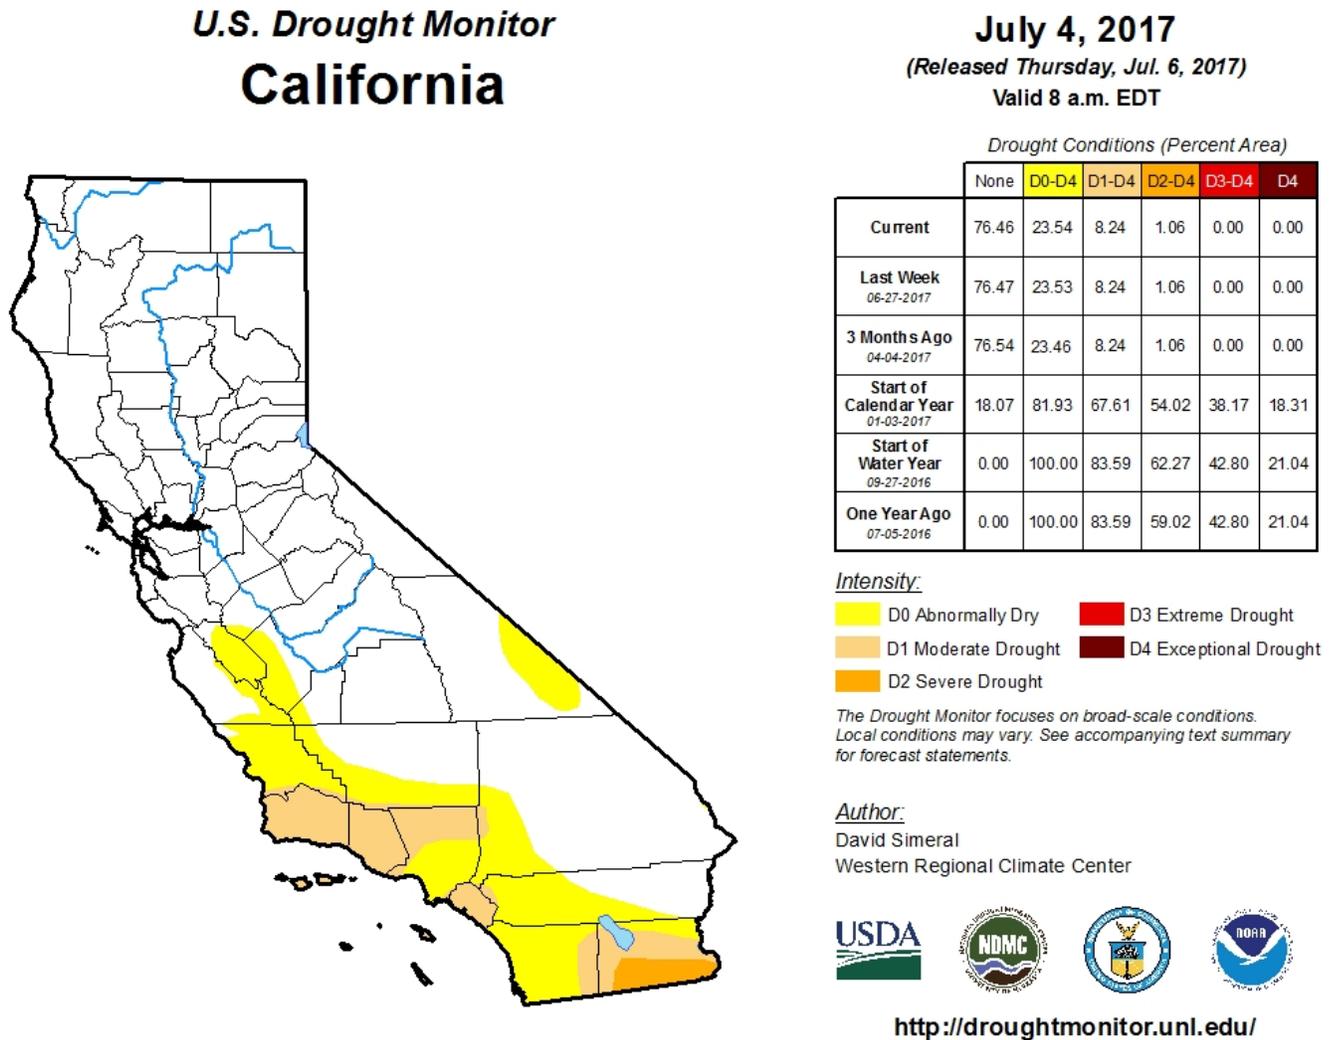

Category	Description	Possible Impacts
D0	Abnormally dry	Slower growth of crops and pastures compared to normal activities.
D1	Moderate drought	Some damage to crops and pastures. Streams, reservoirs, or wells low. Some water shortages may be developing or imminent.
D2	Severe drought	Likely crop and pasture losses. Water shortages are common, leading to restrictions.
D3	Extreme drought	Major crop and pasture losses. Widespread water shortages.
D4	Exceptional drought	Exceptional and widespread crop and pasture losses. Emergency shortages develop.

Source: US Drought Monitor, <http://droughtmonitor.unl.edu/AboutUs/ClassificationScheme.aspx>

Hazard History

Droughts are a relatively frequent event in California, and many native plants and animals have evolved strategies to deal with long-term water shortages. Due to California's extensive water infrastructure networks, a drought in one part of the state may have a relatively small impact if the water supply in the affected area comes from another location that is not under drought conditions. Occasionally the state may experience a widespread drought that lasts for multiple years. A drought from 1928 to 1937 affected all parts of the state and was the longest drought in California's recorded history. Since 2012, California has been experiencing drought conditions statewide. This drought is among the most severe in the state's history (by some measures it is the most severe in 1,200 years) and sparked widespread restrictions on water use. As of July 2017, a majority of the state was out of this drought with portions of southern California experiencing (including South Gate) abnormally dry conditions (Figure 5).

Figure 5. California Drought Conditions, July 2017

Risk of Future Hazards

Because South Gate lacks any substantive agricultural activities, the primary impact of drought conditions in the City is on the local water supply. South Gate has two water providers: most of the community receives its water from the City-owned network, while a small portion, home to over 1,400 service connections, receives water from the private Golden State Water Company's Hollydale System. In most years the City supplies water from its existing groundwater allocation of 11,183 acre-feet (AF). Only in rare occasions does the City rely on water sources outside of their current groundwater allocation and hasn't relied upon outside sources for a number of years. The City's 2015 Urban Water Management Plan identifies eleven groundwater wells, seven of which are active. Of the four remaining wells, three are reserved for standby use and the remaining well is currently inactive due to contamination and reliability issues. The City's groundwater allocation is currently pumped through these seven active wells, which has generally proven sufficient to

meet City needs. If additional water is needed, it would be supplied by the Metropolitan Water District (MWD) of Southern California. MWD's water is imported from the Colorado River and the northern Sierra Nevada, and supplemented by groundwater and other local sources. Since the City's current water demand is less than their groundwater allocation, on a yearly basis, the City regularly stores, leases, and rolls over groundwater supplies to ensure adequate future water supplies are available for future years. This active management conducted by both the City and the Water Replenishment District (groundwater management entity) ensure that groundwater supplies within the City are more resilient than other jurisdictions throughout California.

As most of South Gate's water supply comes from local groundwater sources, local drought conditions have the greatest impact to the community. A long-term lack of precipitation within southern California reduces the amount of water that filters through the soil and becomes groundwater, potentially reducing available groundwater supplies. However, the efforts of the City and WRD are ensuring that these impacts are reduced to the greatest extent possible through groundwater replenishment, water conservation, and additional projects that reduce groundwater vulnerability in the region. Although the City is less dependent on imported water supplies and therefore less vulnerable to droughts in other areas, such droughts may still pose challenges during times when South Gate must supplement its water supply with water purchased from MWD.

Climate Change Considerations

Scientific evidence suggests that precipitation levels in California will decrease as a result of climate change. At the same time, warmer temperatures brought on by climate change are expected to increase the rate of evaporation from bodies of water, further decreasing the amount of available water. It is likely that drought conditions will become more frequent and more severe as a result of climate change. Research linking a specific weather event to climate change has been sparse; however, some studies have found that there may be a connection between climate change and the drought conditions in California since 2012.

Vulnerability/Risk Assessment

As described above, the City of South Gate obtains potable water primarily from locally pumped groundwater. The entire City, and the county as a whole, is highly vulnerable to drought, however through active management, the City's groundwater basin has proven to be resilient to the most recent drought, with groundwater elevations increasing over the past couple of years. The 2015 Urban Water Management Plan sets forth a path for the City to reduce per capita water use 20 percent by 2020, which would make the City more resilient to drought. Since droughts are not likely to cause physical or structural damage to critical facilities, potential losses were not quantified. However, it should be noted that loss of water supplies as a result of drought could exacerbate the effects of other hazards like extreme heat and disease/pest management, and response to hazard events in general. Given the current water demand in the City (and the excess water supply available), this vulnerability is anticipated to be effectively managed for years to come by the programs and initiatives implemented by WRD.

Seismic Hazards

Hazard Description

Seismic hazards occur when accumulated stress between portions of the earth's crust is released, resulting in the sudden ground movement that is perceived as an earthquake. Primary seismic hazards are the direct result of this released stress, and include earthquake fault rupture (the displacement of the ground surface at the site of the earthquake) and seismic shaking (the ground movement itself, which occurs over a wide area beyond the site of the earthquake). Earthquakes can also cause secondary seismic hazards, such as liquefaction and landslides, which are triggered by the fault rupture or seismic shaking.

Description of Primary Seismic Hazards

Seismic activity is most commonly connected with faults, which are areas where large sections of earth's crust called tectonic plates move past each other. The movement of the tectonic plates causes the stress and strain that leads to earthquakes. Deformation of the plates and accumulated stress between them can cause faults and earthquakes to occur over a much broader area than the precise boundary between the plates. In California, the Pacific and North American plates are sliding horizontally past each other, creating what is known as a "strike-slip fault." The boundary between the two plates is known as the San Andreas Fault, although the stress caused by this movement has created thousands of fault areas throughout the state. Most of California lies on the North American plate, although the coastal areas of Central and Southern California, including South Gate, sits on the Pacific plate.

Major earthquakes in California occur less frequently than some other disasters; for the years 1950 to 2012, the state Multi-Hazard Mitigation Plan identifies 178 fire emergencies, 129 flood emergencies, and 23 earthquake emergencies. Although they are the third-largest cause of emergency-related death during this period (with 193 deaths, or approximately 20 percent of all state emergency-related deaths), earthquakes were the largest source of emergency-related injuries and costs.

There are two scales commonly used by scientists to measure earthquakes: the moment magnitude scale and the Mercalli intensity scale. The moment magnitude scale is based on the now largely unused Richter scale and measures the amount of energy released by the earthquake. The Mercalli intensity scale measures the effects of the earthquake, and is based on qualitative observations rather than a rigorous quantitative calculation. Table 15 shows the different categories of the Mercalli intensity scale.

Table 15. Mercalli Intensity Scale

Scale	Intensity	Description
I	Instrumental	Not felt, except by a very few people under especially favorable conditions.
II	Feeble	Felt only by a few people at rest, especially on the upper floors of buildings.
III	Slight	Noticeable by people indoors, especially on the upper floors of buildings, although it is not widely recognized as an earthquake. Parked vehicles may move slightly.
IV	Moderate	Felt indoors by many and felt outdoors by some. May awaken sleeping people. Dishes, windows, and doors disturbed. Parked vehicles move noticeably.
V	Slightly Strong	Felt by almost everyone. Sleeping people awakened, and some dishes and windows broken. Unstable objects overturned, and pendulum clocks may stop.
VI	Strong	Felt by everyone. Some heavy furniture moved, and some instances of falling plaster. Damage slight, although many people may be frightened.
VII	Very Strong	Considerable damage in poorly built or badly designed structures, slight to moderate damage in well-built ordinary structures, and negligible damage in buildings of good design and construction. Some chimneys broken.
VIII	Destructive	Great damage in poorly built structures, considerable damage and partial collapse in well-built ordinary structures, and slight damage in specially designed structures. Chimneys, factory stacks, columns, monuments, and walls fall. Heavy furniture overturned.
IX	Ruinous	Well-designed structures thrown out of plum, considerable damage in specially designed structures. Substantial buildings suffer great damage and partial collapse. Buildings shifted off of foundations.
X	Disastrous	Some well-built wood structures destroyed. Most masonry and frame structures and foundations destroyed. Rails bent.
XI	Very Disastrous	Few if any masonry structures remain standing. Bridges destroyed and rails greatly bent.
XII	Catastrophic	Total damage. Lines of sight and level are distorted. Objects thrown into the air.

Source: US Geological Survey, http://earthquake.usgs.gov/learn/topics/mag_vs_int.php

The moment magnitude and Mercalli intensity scales measure different elements of an earthquake. They do not precisely correlate to each other, although an approximate comparison is given in Table 16.

Table 16. Comparison of Moment Magnitude and Mercalli Intensity Scales

Moment Magnitude	Mercalli Intensity
1.0 to 3.0	I
3.0 to 3.9	II to III
4.0 to 4.9	IV to V
5.0 to 5.9	VI to VII
6.0 to 6.9	VII to IX
7.0 and greater	VIII and greater

Source: US Geological Survey, http://earthquake.usgs.gov/learn/topics/mag_vs_int.php

Description of Secondary Seismic Hazards

Beyond the direct damage from the ground shaking posed by an earthquake, these events can also result in a seismic hazard called liquefaction, which occurs when the force of an earthquake’s shaking causes groundwater to mix with the soil. This mixture temporarily becomes a fluid and loses its strength, which may in turn cause buildings and other structures built on or in it to tilt, collapse, or otherwise suffer damage. Liquefaction can also occur independently of an earthquake, if any other sudden and significant stress causes the mixing of groundwater and soil. The risk of liquefaction depends on many different factors, including the height of the groundwater table and the types of soil in an area.

Earthquakes can also cause landslides, either directly as a consequence of the ground shaking or indirectly when soil loses its structural integrity due to liquefaction. Landslides can occur under multiple conditions, but they are most likely in areas with steep slopes with highly fractured rocks, areas with loose and weak soils, and areas on or near deposits of material caused by previous landslides.

Damage caused by seismic hazards, either primary or secondary, can create other hazardous conditions. Seismic hazards can damage natural gas pipelines, causing gas leaks that can ignite and cause an urban fire. Broken water lines can cause localized flooding, and damages to wastewater pipes may create a public health hazard. Earthquakes may also damage containers that hold hazardous materials, leading to a hazardous materials release emergency.

Hazard History – Primary Seismic Hazards

Four large earthquakes have occurred around South Gate in recent history:

- In 1933, an earthquake off the coast of Long Beach measured an estimated 6.4 on the moment magnitude scale with an estimated Mercalli intensity of VIII. This earthquake killed 115 people, largely in southern Los Angeles and Long Beach, although five people were killed in South Gate and multiple buildings were destroyed.
- The 1971 San Fernando earthquake in the San Gabriel Mountains measured 6.5 on the moment magnitude scale and XI on the Mercalli intensity scale, killing 64 people and causing extensive damage to freeway structures and buildings.

- In 1987, an earthquake near Rosemead in the San Gabriel Valley, with a moment magnitude of 5.9 and a Mercalli intensity of VIII, killed three people and was widely felt throughout Southern California.
- The Northridge earthquake in 1994 measured 6.7 on the moment magnitude scale with a Mercalli intensity of IX. It killed 57 people, caused over 5,000 injuries, and spawned multiple strong aftershocks. This earthquake caused an estimated \$20 billion or more in damages.

Hazard History – Secondary Seismic Hazards

The California Department of Conservation has not definitively noted historic instances of liquefaction in South Gate. However, such events were observed in the nearby City of Compton during the 1933 Long Beach earthquake. It is possible that some of the damage that occurred in South Gate and other nearby communities during the 1933 earthquake was linked to liquefaction. Liquefaction has caused significant damage as part of many earthquakes in California history, including the 1971 San Fernando earthquake and the 1994 Northridge earthquake. There are no historic instances of landslides in South Gate or in the immediate vicinity.

Risk of Future Primary Seismic Hazards

South Gate is located in a seismically active area. The Alquist-Priolo Act requires that the California Geologic Survey identify faults in the state that may pose a risk of fault rupture. These faults, known as Alquist-Priolo faults, are also capable of creating a significant ground shaking event, and include most of the major faults present in California. While there are no Alquist-Priolo faults within the City, there are a number of these faults in the surrounding area. The following active faults, most of which are designated as Alquist-Priolo faults, are located within 60 miles of the community and are capable of producing significant earthquakes:

- The Newport-Inglewood Fault Zone is made up of three distinct segments and several faults and fractures, running approximately from the Santa Monica Mountains near Beverly Hills to Newport Beach. It passes approximately 4 miles from South Gate at its closest point. The last major event along this fault was the 1933 Long Beach earthquake. The Southern California Earthquake Center estimates that a future major event along this fault could measure 6.0 to 7.4 on the moment magnitude scale. ¹
- The Palos Verdes Fault Zone extends from the Palos Verdes peninsula south into the Pacific Ocean, running approximately 12 miles from South Gate at its closest point. It has not produced a significant earthquake in recorded history. While not a major Alquist-Priolo fault, The Southern California Earthquake Center estimates that substantial activity from the fault has occurred within the past 10,000 years, and that this fault is capable of producing an earthquake measuring 6.0 to 7.0 or more on the moment magnitude scale. ²
- The Whittier-Elsinore Fault Zone runs from the Chino Hills region to the California-Mexico border, and is approximately 8 miles from South Gate at its closest point. Near Chino Hills it splits into two separate segments, the Chino Fault and the Whittier Fault. The last major event along this fault was a 1910 earthquake measuring

¹ <http://scedc.caltech.edu/significant/newport.html>

² <http://scedc.caltech.edu/significant/palosverdes.html>

an estimated 6.0 on the moment magnitude scale. This fault is believed to cause a major event approximately every 250 years with a probable magnitude of 6.5 to 7.5 on the moment magnitude scale.³

- The Sierra Madre Fault Zone runs along the southern edge of the San Gabriel Mountains from La Cañada-Flintridge to Claremont, approximately 15 miles from South Gate at its closest point. It is made up of five segments; scientists are unclear if any event along this fault could be limited to one segment or if events along multiple segments are possible. The Southern California Earthquake Center estimates that the last major event along the fault zone happened within the past 10,000 years (although no specific event is known), and suggests that it is capable of producing an event measuring 6.0 to 7.0 on the moment magnitude scale. It is not a major Alquist-Priolo fault.⁴
- The San Andreas Fault, the largest and most well-known of California's faults, runs from Cape Mendocino to the Salton Sea. It is approximately 40 miles from South Gate at its closest point. It has caused numerous major earthquakes throughout California's history, including the 1857 Fort Tejon earthquake, which had an estimated moment magnitude of 7.9 and is the strongest earthquake in California's recorded history. Approximately 225 miles of the fault ruptured during this event, including areas near the Los Angeles region. The Southern California Earthquake Center estimates that a future major event along the southern part of the San Andreas Fault, including a potential repeat of the 1857 earthquake, could measure 6.8 to 8.0 on the moment magnitude scale.⁵ The recent third Uniform California Earthquake Rupture Forecast estimates that there is at least a 19 percent chance of the southern portion of the San Andreas Fault causing a major earthquake by 2044.⁶
- The San Jacinto Fault Zone runs from San Bernardino to the Superstition Mountains south of the Salton Sea, and is approximately 45 miles from South Gate at its closest point. The last major event along this fault was the Borrego Mountain earthquake on April 9, 1968, which measured 6.8 on the moment magnitude scale. The Southern California Earthquake Center estimates that major events along this fault could measure 6.5 to 7.5 on the moment magnitude scale.⁷

The list above describes the faults most likely to produce a significant earthquake near or in South Gate. Additionally, there is a risk of earthquakes from faults that have not yet been discovered. The 1994 Northridge earthquake, which caused more property damage than any other earthquake in the United States and was the ninth most damaging earthquake in history, occurred along a then-undiscovered fault. A major earthquake along any of these faults could cause significant damage to South Gate. Figure 6 presents the City in relation to major faults, specifically the Newport-Inglewood – Rose Canyon fault zone.

Figure 7 identifies the potential for ground shaking in the City. This map shows the level of ground motion from an earthquake which has a 2 percent chance of being exceeded in the next 50 years (i.e., there is a 2 percent chance that an earthquake in the next 50 years will cause ground motion greater than what is shown in the figure). This map shows

³ <http://scedc.caltech.edu/significant/elsinore.html>

⁴ <http://scedc.caltech.edu/significant/sierramadre.html>

⁵ <http://scedc.caltech.edu/significant/sanandreas.html>

⁶ <http://pubs.usgs.gov/fs/2015/3009/pdf/fs2015-3009.pdf>

⁷ <http://scedc.caltech.edu/significant/sanjacinto.html>

the level of ground motion in short periods (0.2 second intervals), which is applicable to short, relatively stiff buildings such as the ones present in South Gate. The force of the shaking is measured as a percentage of earth's normal gravity (e.g., a shaking of 1.55 g is 155 percent that of normal gravity).

Risk of Future Secondary Seismic Hazards

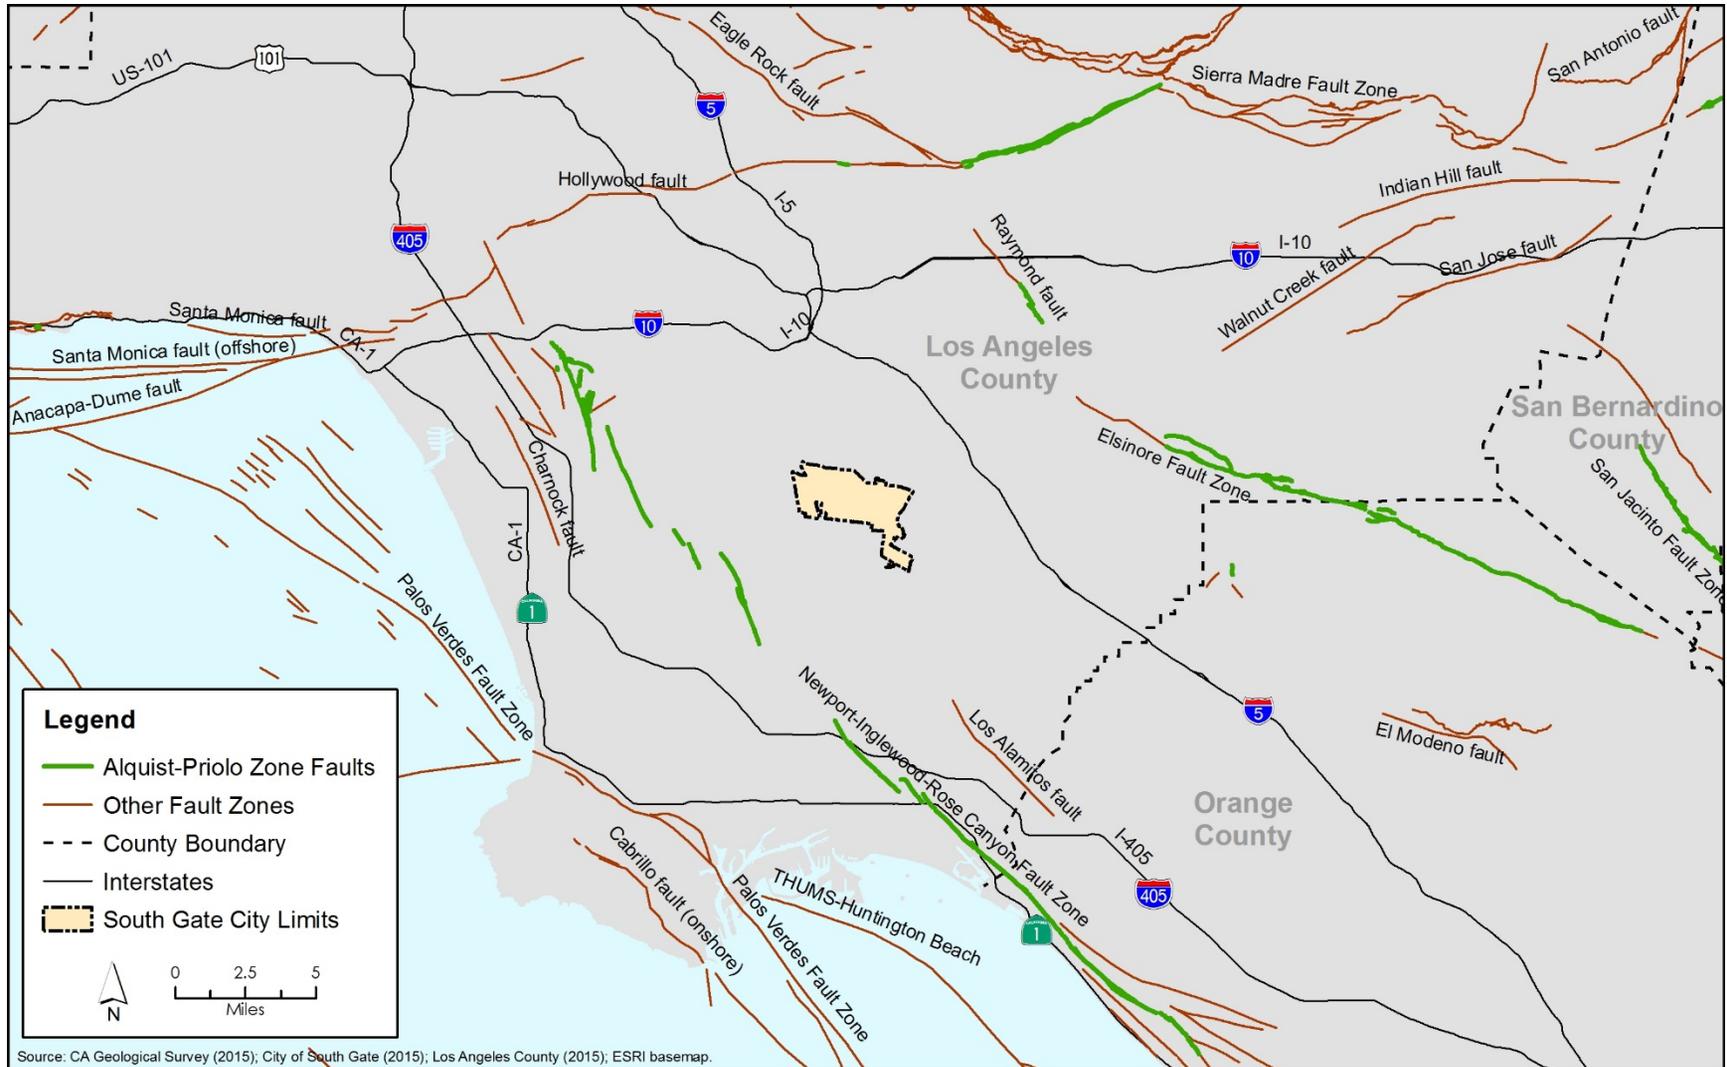

The soil under South Gate is alluvial deposits, which is material (often sand, silt, or gravel) deposited by a river. This soil type can be susceptible to liquefaction. The California Department of Conservation identifies all of South Gate being at an elevated risk for liquefaction due to these soil types and a high water table (less than 40 feet below the surface). However, South Gate City staff identifies the water table as being 80–100 feet below the surface, and does not consider liquefaction as a substantial risk in the community.

The generally flat topography of South Gate means that there are no designated zones at an elevated risk of landslides. However, there is a possibility of small landslides along the Los Angeles River, drainage channels, or other areas where steep slopes occur. Small landslides can occur during grading and other earth-moving activities if appropriate mitigation techniques are not taken. Additionally, areas such as South Gate that are at an elevated risk of liquefaction may experience a phenomenon called lateral spreading, when the liquefied soil spreads out across shallow slopes and behaves very much like a low-angle landslide. Figure 8 illustrates the liquefaction potential in the City.

Climate Change Considerations

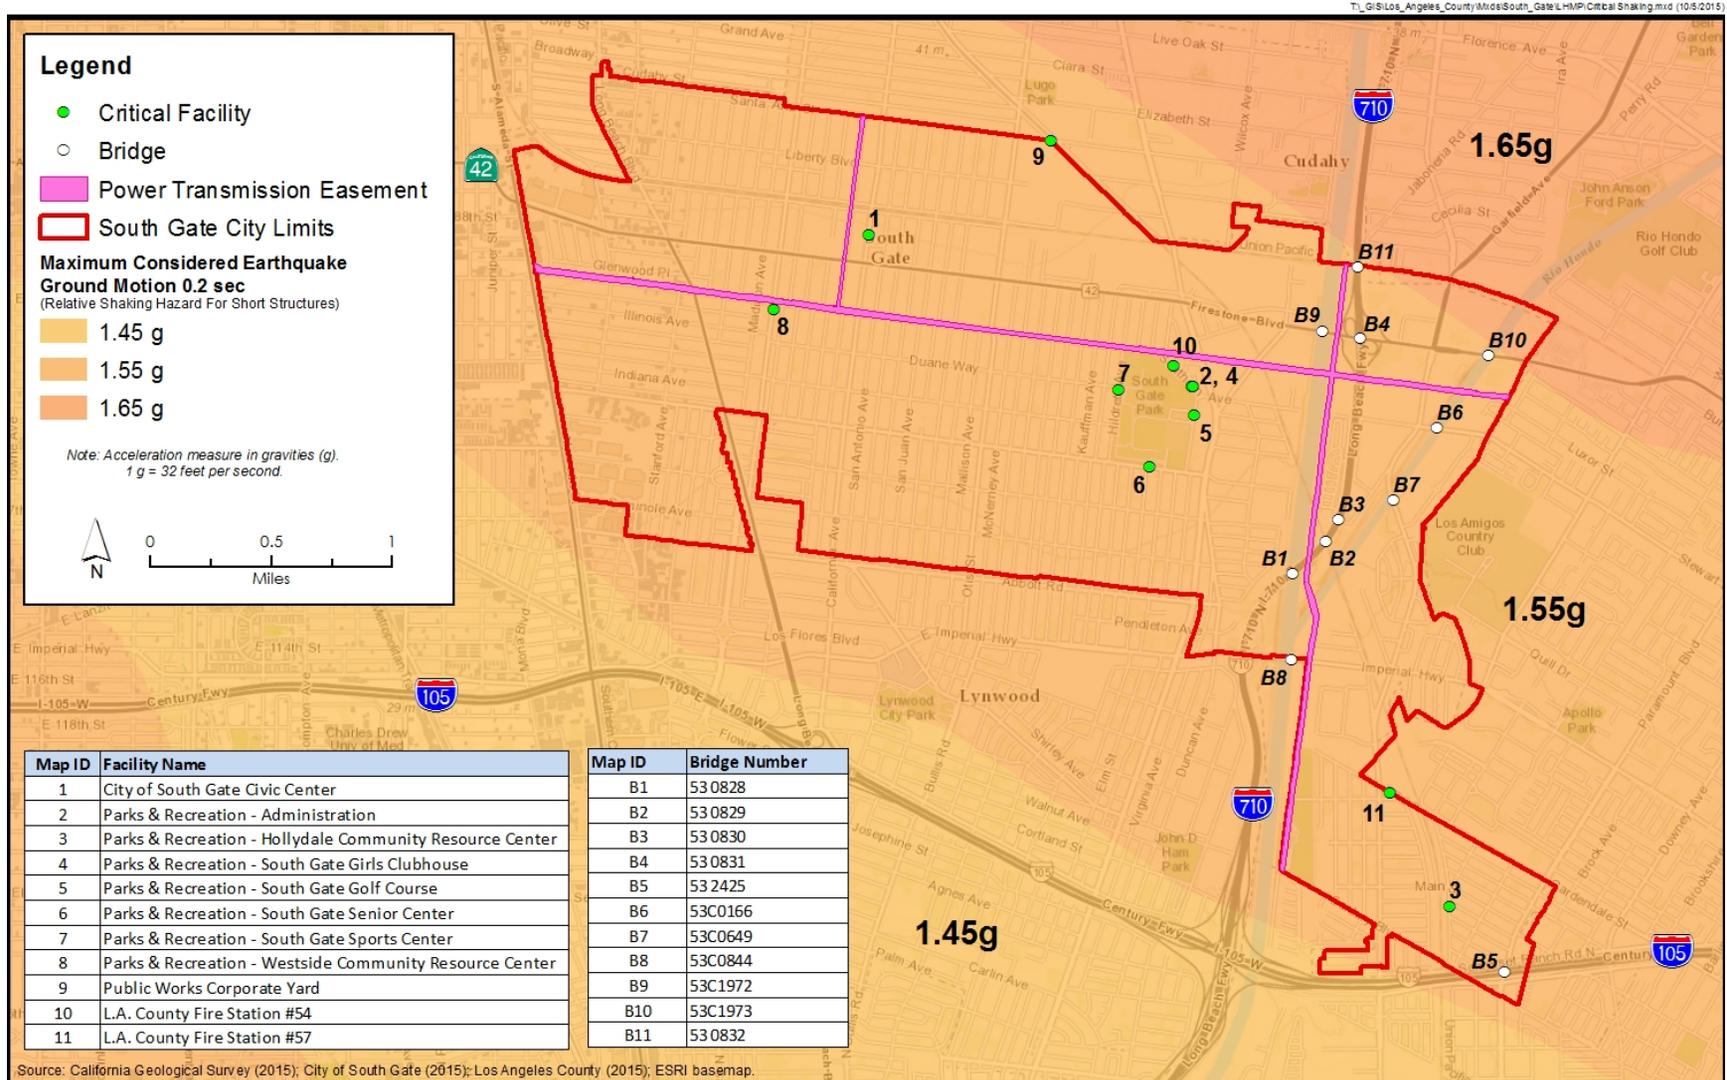

Climate change is not expected to have any direct influence on the likelihood, size, and/or severity of any future seismic-related event. It is possible that anticipated changes to precipitation levels and storm intensity may affect areas subject to liquefaction. However, at this point, the relationship between climate change and liquefaction is too uncertain to include in this document. Since the field of climate change science is dynamic, the City will review and summarize new research that occurs on this topic during the next update cycle.

Figure 6. Proximity to Major Faults

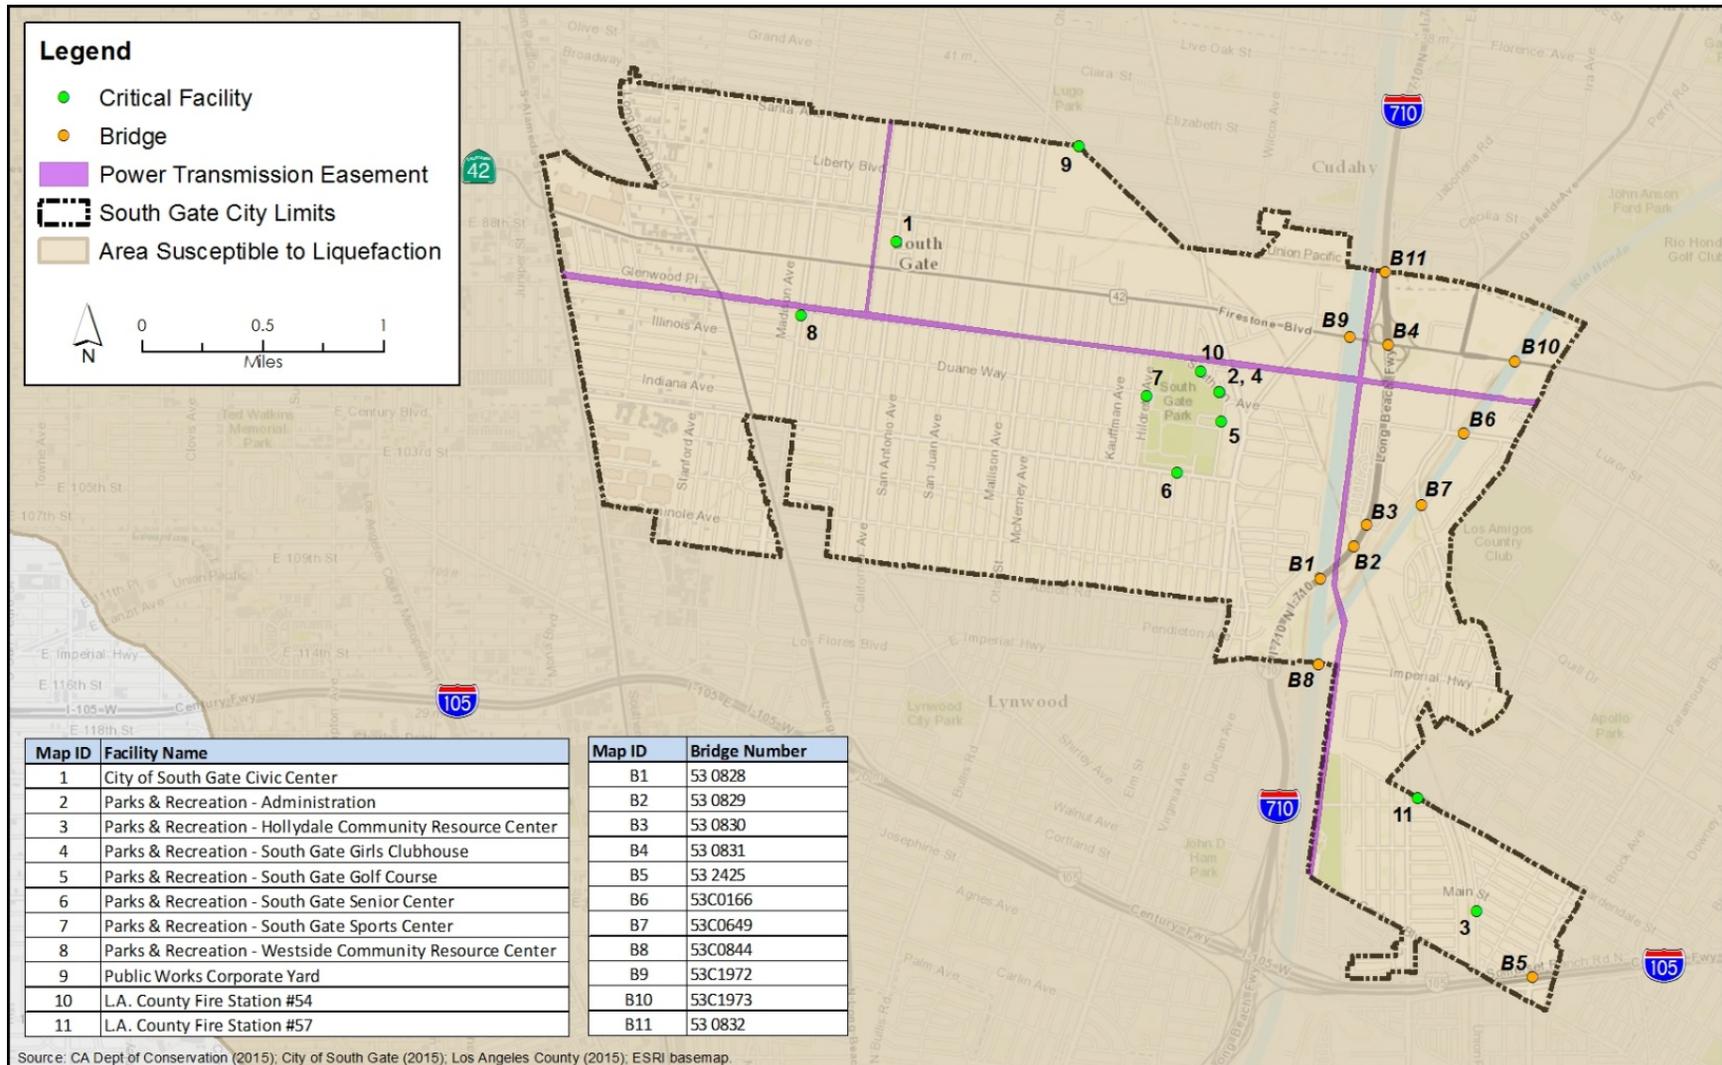

There is no content on this page.

Figure 8. Area Susceptible to Liquefaction

There is no content on this page.

Vulnerability/Risk Assessment

Based on Figures 6, 7, and 8, all 11 of the City’s critical facilities are susceptible to damage from seismic shaking and liquefaction. Table 17 reports the potential loss that could result from a seismic event. Regarding liquefaction potential, analysis of the liquefaction overlay shows that the populated area affected by liquefaction is a total of 4,706 acres. Approximately 95,000 residents, or 100 percent of the City’s total population, could be affected in the event of liquefaction. In addition, 37,816 employees, or 100 percent of the people that work in South Gate, could be affected.

Table 26 at the end of the chapter provides a summary of residents and employees affected by hazard. It should be noted that although the City is located in a state liquefaction zone, based on discussion with South Gate City staff, water tables are deep enough (between 80 and 100 feet) that despite being in a liquefaction zone, liquefaction does not pose a substantial threat.

Table 17. Critical Facilities Susceptible to Seismic Shaking and Liquefaction

Map Number	Facility Name	Replacement Value	Contents Value	Potential Loss
1	City of South Gate Civic Center	\$18,942,341	\$2,399,619	\$21,341,960
2	Parks & Recreation - Administration	\$5,527,027	\$343,609	\$5,870,636
3	Parks & Recreation - Hollydale Community Resource Center	\$1,063,646	\$199,154	\$1,262,800
4	Parks & Recreation - South Gate Girls Clubhouse	\$2,547,566	\$143,044	\$2,690,610
5	Parks & Recreation - South Gate Golf Course	\$135,221	\$19,645	\$154,866
6	Parks & Recreation - South Gate Senior Center	\$1,369,861	\$87,801	\$1,457,662
7	Parks & Recreation - South Gate Sports Center	\$19,078,910	\$597,246	\$19,676,156
8	Parks & Recreation - Westside Community Resource Center	Not available	Not available	Not available

10	L.A. County Fire Station #54	Not available	Not available	Not available
11	L.A. County Fire Station #57	Not available	Not available	Not available
Total Potential Losses				\$66,156,892

Extreme Heat

Hazard Description

While there is no universal definition for an extreme heat event, a common definition for planning in California identifies an extreme heat day as a day where the high temperature exceeds the average high temperatures of 98 percent of the historic days between April and October. Five extreme heat days in a row is considered a heat wave. The threat of extreme heat can be higher in urban areas, where dark-colored roofs and paving materials cause the air temperature to be hotter than in surrounding, less developed areas; this is known as the urban heat island effect.

The greatest risk from extreme heat events are health-related. While some heat-related illnesses are often minor and/or temporary, including heat rash, heat cramps, and heat exhaustion, extreme heat can overwhelm the body's ability to maintain a safe internal temperature (an ability called thermoregulation), which can cause a person's body temperature to reach dangerous levels. If a person's internal temperature rises from a normal level of 98.6°F to 104°F or above, heatstroke, the most serious heat-related illness, can occur. Heatstroke can cause fainting, seizures, and mental impairment. If left untreated, it may lead to permanent organ damage, coma, or death.

The risks of extreme heat are higher for some individuals, including the elderly, lower-income individuals, and outdoor workers. Elderly persons, especially those 85 years of age or older, are more likely to suffer potentially fatal respiratory and cardiovascular complications during heat events. They are also more likely to take medication that already reduces their thermoregulatory capability, and may be less likely to take care of themselves during emergency situations. Lower-income individuals are more likely to live in housing without adequate cooling capacity, such as an air conditioner, which can make them more vulnerable to heat-related illnesses. They may also lack access to effective transportation that allows them to reach cooling centers, seek medical help, or obtain other assistance as needed. Outdoor workers, such as construction workers, are more exposed to extreme heat conditions than many other people and therefore are also at risk of extreme heat.

Infrastructure-related complications can also result from extreme heat. Power lines can become stressed during extreme heat, due to a combination of equipment being less efficient in high temperatures and increased demand for electricity during extreme heat (generally to run air conditioners). This combination of factors can overwhelm electricity infrastructure and make it more likely to fail, which can cause power outages and in turn result in increased health risks. In particularly extreme heat events, roads and railways may be damaged by the high temperatures, creating transportation delays or closures.

Hazard History

The worst heat event in California history occurred in the Los Angeles area in 1955, when an eight-day heat wave resulted in temperatures as high as 108°F in downtown Los Angeles and killed 946 people. A heat wave in July 2006 killed 147 people throughout the state, although the Los Angeles region was less impacted than the Central Valley.

According to Cal Adapt (the State of California Climate Adaptation data portal), an extreme heat event in South Gate occurs when temperatures in the area rise above 92°F, which on average occurs four times each year.

Risk of Future Hazards

The risk of extreme heat events is likely to rise in South Gate and throughout California. An increase in extreme heat events is one of the primary threats posed by climate change. Future extreme heat events are likely to be more frequent and more intense, and potentially longer-lasting. The California Energy Commission forecasts that by 2050, South Gate could see up to 31 extreme heat days each year, potentially rising to as high as 77 extreme heat days by the end of the century. In addition to direct health impacts, this may cause street trees and other vegetation in South Gate to suffer further stress, making them more vulnerable to disease or death. This is of particular concern since street trees help provide necessary shade, reducing the urban heat island effect.

Climate Change Considerations

As noted above, climate change is likely to cause an increase in the frequency and severity of extreme heat events throughout California. Although the greatest increases are likely to occur in more inland areas, scientists have identified moderate-temperature areas such as South Gate as being at an elevated risk because people in these areas are not used to extreme heat. There is a wide range of potential frequency and severity of extreme heat events as a result of climate change, but scientific consensus is that extreme heat will pose a greater risk in future years than it currently does due to climate change.

Vulnerability/Risk Assessment

Like other communities in the region, South Gate is at an elevated risk of extreme heat. Urbanized areas experience higher temperatures than rural communities (known as the urban heat island effect⁸), which could further elevate temperatures in and around the City. South Gate has a somewhat greater rate of poverty than Los Angeles County as a whole, and so may have a greater proportion of lower-income residents with elevated vulnerability than surrounding communities.

Hazardous Materials

Hazard Description

The category of “hazardous materials” covers a large range of natural and artificial substances that can be a risk to the public, such as toxic metals and chemicals, flammable or explosive materials, corrosive material, infectious substances, and radioactive materials. These materials can create health problems if inhaled, touched, or ingested. Alternatively, these materials can be relatively harmless by themselves but can create dangerous conditions (e.g., explosives).

⁸ According to the US EPA, the urban heat island effect is a measurable increase in ambient urban air temperatures resulting primarily from the replacement of vegetation with buildings, roads, and other heat-absorbing infrastructure. The heat island effect can result in significant temperature differences between rural and urban areas.

Hazardous materials can also escape from containment vessels and contaminate groundwater, soil, or air, which may result in further impacts. There is also concern about the long-term public health and environmental impacts that may result from the sustained use of or exposure to such materials.

Hazardous material emergencies can occur in a number of ways. An unrelated disaster such as an earthquake or flood may damage storage tanks or pipes, causing the material to leak out. Even if buildings or containment structures suffer minimal damage, hazardous materials can be released. Accidents can also occur independently of other disasters, such as from human error or malfunctioning or broken equipment.

Transportation accidents are another way that hazardous materials may pose a risk to people and property. Road vehicles, trains, and (more rarely) aircraft are all used to transport these materials, and accidents involving these vehicles may involve the release of hazardous materials. One of the most prominent examples of a transportation accident involving hazardous materials occurred in 1973 in the City of Roseville, near Sacramento. A freight train entering the City's rail yard suffered a brake accident, setting a wooden boxcar carrying 250-pound bombs on fire. The resulting explosion destroyed the rail yard and injured approximately 100 people, although there were no fatalities.

Hazard History

There is no history of significant hazardous material-related emergency events in South Gate, although there have been a few substantial events in the vicinity. The 1994 Northridge earthquake led to over 15,000 natural gas leaks and 60 hazardous material releases that required an off-site response. More recently, an overpressurized piece of equipment at an oil refinery in Torrance caused an explosion that released particles of fiberglass and glass wool into the surrounding neighborhoods.

Risk of Future Hazards

In South Gate, a prime area of concern for hazardous material releases is via rail accidents. There are two rail lines in South Gate, both owned by the Union Pacific Railroad. The Spur Line runs along the northern portion of the City in an east-west direction north of Firestone Boulevard, while the San Pedro Subdivision runs diagonally through the eastern portion of South Gate in a generally north-south alignment. According to South Gate's 2009 General Plan, both lines handle approximately four to six trains each day. There are no grade-separated rail crossings in South Gate, except for where the San Pedro Subdivision runs underneath Interstate 710. A third freight rail line, called the Alameda Corridor, runs along Alameda Avenue at the City's western border and connects the Ports of Los Angeles and Long Beach to the national rail network near downtown Los Angeles. In 2015, the Alameda Corridor carried an average of 41 trains each day. Trains carrying hazardous materials may use any of these three rail lines, and an accident involving hazardous materials on any of these rail lines may create a health and safety risk in South Gate.

South Gate may also be at risk from sites previously contaminated with hazardous or potentially hazardous materials. The California Department of Toxic Substances Control maintains a list of stationary hazardous material facilities with known or potential soil contamination. This list, called the Cortese List, identifies four such sites in South Gate. All four

were previously used for various industrial activities, including manufacturing, machine repair, and recycling. These four sites are currently undergoing cleanup activities. Table 18 identifies these sites and the potential sources of contaminants.

Table 18. Cortese List Sites in South Gate

Address	Oversight Agency	Potential Contaminants
5211 Southern Avenue	US Environmental Protection Agency	Metals (cadmium, copper, lead, nickel, chromium, and/or zinc) Volatile organic compounds (VOCs)
2525 East Firestone Boulevard	California Department of Toxic Substances Control	Dry-cleaning fluid Industrial solvents
9301 Rayo Avenue	US Environmental Protection Agency	Industrial solvents
8440 Alameda Street	California Department of Toxic Substances Control	Metals (cadmium, copper, lead, nickel, chromium, and/or zinc) Gasoline and/or diesel Volatile organic compounds (VOCs)

Source: California Department of Toxic Substances Control, http://www.dtsc.ca.gov/SiteCleanup/Cortese_List.cfm

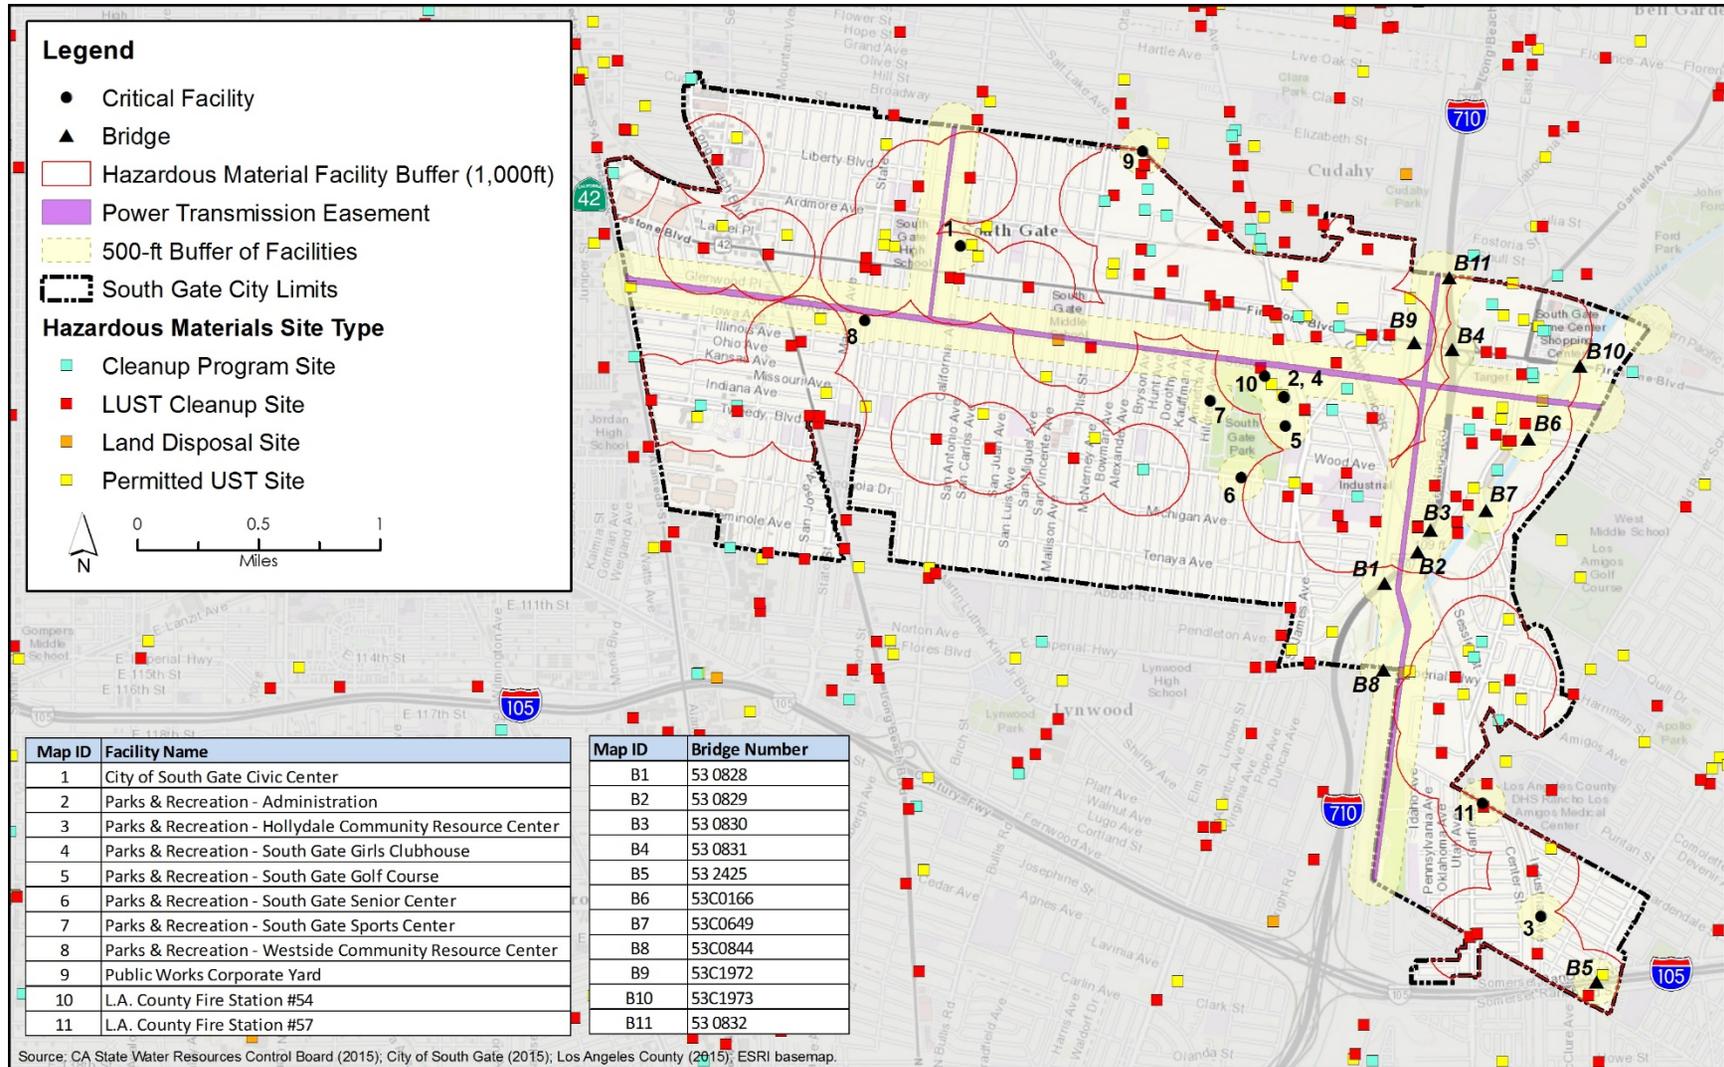

In addition to the facilities on the Cortese List, the State Water Resources Control Board maintains a record of all sites in California that are regulated to help prevent contamination to water bodies and groundwater supplies. There are 155 such sites in South Gate, most of which are underground storage tanks. However, many of these sites are closed and all cleanup activities have been completed. Table 19 shows the number of sites in South Gate by status. While some risk does remain, only a handful of sites are in a position that could result in hazardous materials release. Figure 9 illustrates all hazardous material sites in the City.

Table 19. Regulated Groundwater Contaminant Sites in South Gate by Status

Status	Number of Sites	Description
Active – WDR	2	The site is currently active and regulated under the Waste Discharge Requirements program.
Completed – Case Closed	110	A formal closure decision document has been issued.
Historical – WDR	4	The site was previously regulated under the Waste Discharge Requirements program but no longer is.
Never Active – WDR	2	The site is regulated under the Waste Discharge Requirements program, but has never been active.
Open – Assessment and Interim Remedial Action	2	Interim remediation is ongoing, and other investigative or analytical actions are occurring.
Open – Eligible for Closure	5	All corrective action is done.
Open – Inactive	7	There are no regulated activities at the site.
Open – Remediation	7	A remediation strategy has been selected and is being implemented.
Open – Reopen Case	1	The site has been reopened for further analysis or remediation.
Open – Site Assessment	14	The site is being analyzed.
Open – Verification Monitoring	1	Remediation is complete, and a monitoring program is in place to confirm the successful conclusion of these activities.
Total	155

Climate Change Considerations

While climate change is not directly linked to the risk of hazardous material releases, it does pose an indirect risk. Climate change is expected to increase the number of intense storm events in and around South Gate, which may result in an increase in flooding and severe wind. Both types of events could damage hazardous material storage containers, increasing the risk of potential release.

Vulnerability/Risk Assessment

Table 20 identifies critical facility locations that could be exposed to hazardous materials releases during a disaster event. These locations only take into consideration the proximity to existing hazardous materials facilities and do not include potential exposure associated with the movement/transport of hazardous materials. The maximum potential loss shown in the table is based on the assumption that all facilities within 500 feet of a hazardous materials facility would be impacted during a hazardous materials release/event. While this is possible, actual losses will vary based on the location and magnitude of the event.

Table 20. South Gate Critical Facilities Located Adjacent to Hazardous Materials Sites

Map #	Facility	Replacement Value	Contents Value	Potential Loss
1	City of South Gate Civic Center	\$18,942,341	\$2,399,619	\$21,341,960
2	Parks & Recreation - Administration	\$5,527,027	\$343,609	\$5,870,636
4	Parks & Recreation - South Gate Girls Clubhouse	\$2,547,566	\$143,044	\$2,690,610
9	Public Works Corporate Yard	\$11,319,189	\$2,383,013	\$13,702,202
10	L.A. County Fire Station #54	Not available	Not available	Not available
11	L.A. County Fire Station #57	Not available	Not available	Not available
Total Potential Losses		\$38,336,123	\$5,269,285	\$43,605,408

Analysis of the hazardous materials overlay shows that the populated area within 1,000 feet of a hazardous materials facility is a total of 2,868 acres. A total of 48,288 residents (51 percent of the City's total population) could be exposed to a hazardous materials release. In addition, 19,026 employees, or about 50 percent of the people that work in South Gate, could be exposed. Table 26 at the end of the chapter provides a summary of residents and employees affected by hazard.

Severe Weather

Hazard Description

Severe weather, as defined in this Plan, includes hail, tornadoes, and wind/windstorms. Other weather and climate-related hazards, including flooding, drought, and extreme heat, are discussed in their respective sections.

Hail is a type of precipitation that involves rough spheres or lumps of ice. It forms within strong thunderstorms, when water droplets are forced upward in the thundercloud by strong winds called updrafts. As the droplets rise, the air temperature drops below freezing, causing the drops to freeze and stick together. Eventually the weight of the hailstone becomes too heavy for the updraft to hold it up, and it falls to the surface.⁹ Hailstones are generally larger than 0.2 inches across, and can pose a hazard when they grow larger than 0.8 inches. At this size, they can damage roofs, break windows, and damage plant leaves. Particularly large hailstones can knock branches off of trees, causing further damage. In very rare instances, people struck by massive hailstones can suffer concussions or other head trauma.

Tornadoes are rotating columns of air reaching from the ground’s surface to a cloud, usually a thundercloud. Although scientists do not fully understand how tornadoes form, tornadoes typically start when rapidly descending wind within a thunderstorm (a downdraft) drags a rotating part of the thunderstorm called the mesocycle down below the base of the cloud and focuses the mesocycle’s base over a relatively small area. At the same time, the mesocycle causes air currents of different temperature and humidity to mix, which creates an area of low pressure directly below the mesocycle. This low-pressure area pulls the focused mesocycle to the ground, where it becomes a tornado. The threat caused by tornadoes is due to very high wind speeds, which can directly damage objects and structures. Additionally, tornadoes can pick up heavy objects and smash them into other objects or buildings, causing further damage. The strength of a tornado is measured using the Enhanced Fujita scale, which estimates wind speeds by the observed damage. The Enhanced Fujita scale is shown in Table 21.

Table 21. Enhanced Fujita Scale

Rating	Wind Speeds ¹	Description
F0	65 to 85 mph	Light damage: Some damage to chimneys. Branches broken off trees. Shallow-rooted trees pushed over. Sign boards damaged.
F1	86 to 110 mph	Moderate damage: Surfaces peeled off roofs. Mobile homes pushed off foundations or overturned. Moving vehicles blown off roads.
F2	111 to 135 mph	Considerable damage: Roofs torn off frame houses. Mobile homes demolished. Box cars overturned. Large trees snapped or uprooted. Light objects become missiles. Cars lifted off ground.
F3	136 to 165 mph	Severe damage: Roofs and some walls torn off well-constructed buildings. Trains overturned. Most trees uprooted. Heavy cars lifted off the ground and thrown.
F4	166 to 200 mph	Devastating damage: Well-constructed buildings leveled. Structures with weak foundations blown away. Large objects become missiles.
F5	More than 200 mph	Incredible damage: Strong frame buildings leveled and swept away. Automobile-sized missiles fly through the air in excess of 100 meters. Incredible phenomena will occur.

1. These are the estimated wind speeds of a three-second gust, based on the type of damage. The wind speeds are not observed measurements.

Source: NOAA Storm Prediction Center, <http://www.spc.noaa.gov/efscale/>

⁹ Hail is sometimes confused with sleet, which is made of much smaller balls or pellets of ice. While hail is formed in thunderstorms, sleet is created when snow melts and then refreezes, and thus only occurs in very cold weather.

Independent of tornadoes, very high winds can also pose a threat by directly damaging property or by causing indirect damage such as spreading or intensifying a fire, creating airborne debris and missiles, or blowing over trees. Severe winds may occur in a storm system, where the differences in air pressure, temperature, and humidity can create strong gusts, or they may occur independently. The intensity of wind events is measured in the Beaufort scale, shown in Table 22.

Table 22. Beaufort Scale

Beaufort Scale	Wind speed	Description
0: Calm	Less than 1 mph	Smoke rises vertically.
1: Light air	1 to 3 mph	Direction shown by smoke drift but not by wind vanes.
2: Light breeze	4 to 7 mph	Wind felt on face; leaves rustle; wind vane moved by wind.
3: Gentle breeze	8 to 12 mph	Leaves and small twigs in constant motion; light flags extended.
4: Moderate breeze	13 to 18 mph	Raises dust and loose paper; small branches moved.
5: Fresh breeze	19 to 24 mph	Small trees in leaf begin to sway; crested wavelets form on inland waters.
6: Strong breeze	25 to 31 mph	Large branches in motion; whistling heard in telegraph wires; umbrellas used with difficulty.
7: Near gale	32 to 38 mph	Whole trees in motion; inconvenience felt when walking against the wind.
8: Gale	39 to 46 mph	Twigs break off trees; generally impedes progress.
9: Strong gale	47 to 54 mph	Slight structural damage (chimney pots and slates removed).
10: Storm	55 to 63 mph	Seldom experienced inland; trees uprooted; considerable structural damage.
11: Violent storm	64 to 72 mph	Very rarely experienced; accompanied by widespread damage.
12: Hurricane	73 mph and above	Devastation.

Hazard History

Hail is a relatively uncommon event in the Los Angeles region, and any such events that do occur are usually fairly harmless. However, a few rare significant hail events in the area have created a hazard for people and property. In 1986, a series of thunderstorms created hail that caused traffic accidents in Pasadena and caused classes to be cancelled at California State University, Northridge. Hail events are somewhat more common in the desert areas of Southern California, which are more likely to see thunderstorms than the coastal regions. In 1960, hail 2.75 inches in diameter fell in Riverside County, the largest size hail to hit Southern California. More recently, a 2008 hailstorm in the San Jacinto Mountains injured two people (the only known event in California of people being injured by hail) and forced a helicopter to make an emergency landing. South Gate staff also reported localized hail events causing damage to property in the City within the last 10 years.

Tornadoes are most common in the Great Plains and Midwest regions of the United States, between the Rocky and Appalachian Mountain ranges. However, tornado events can occur in all parts of the United States, including California. The California Multi-Hazard Mitigation Plan identifies 316 tornadoes that have struck the state from 1950 to 2006, most of which measured F0 on the Enhanced Fujita scale. The state has seen two F3 tornadoes in recorded history: one in Riverside County in 1973, and one in Orange County in 1978 that injured three people. The Tornado Project identifies 42 tornadoes that have struck Los Angeles County since 1950, including an F2 tornado in 1983 that injured 30 people and damaged 50 homes near western Los Angeles. South Gate staff reported the presence of one tornado south of the City near the Los Angeles River channel within the last 20 years.

High winds are an occasional event in the Los Angeles region. A common type of high wind event involves Santa Ana winds, which occur when areas of high pressure form in the Great Basin and northern Mojave Desert regions, both of which sit at high elevation. The pressure forces the air out of these regions toward the California coast, causing it to heat up and dry out as it descends toward sea level. Santa Ana winds can have gusts of 70 to 80 mph or more, and often are responsible for spreading wildfires. Santa Ana events have also toppled trees and knocked out power multiple times in the region in recent years; for example, a 2011 event destroyed multiple buildings and left over 340,000 people without power. Strong wind events can also be associated with thunderstorms. A strong thunderstorm in 2000 caused winds up to 100 mph in the Gateway Cities and southern San Gabriel Valley regions, including causing severe damage to factories and mobile homes in Paramount.

Risk of Future Hazards

South Gate is likely to be at continued risk from these types of events. High winds, including Santa Ana events, are expected to continue to be the primary type of severe weather in the City. Given the severity of these events and the frequency at which they occur, most damage associated with severe weather is likely to be the result of high winds. Hailstorms are expected to remain a more uncommon event, and ones capable of causing substantial damage are likely to be more uncommon still. Tornadoes capable of causing significant damage are rare in California and the odds of one posing a threat to South Gate are low, albeit present.

Climate Change Considerations

Climate change is expected to cause an increase in the number of intense storms that affect California. As hail, tornadoes, and some types of high wind events are all linked to strong thunderstorms, it is possible that an increase in the number of intense storms may also cause an increase in the number of these severe weather events. Scientists have not yet identified any clear relationship between climate change and the frequency or intensity of Santa Ana events, although research into this subject remains ongoing.

Vulnerability/Risk Assessment

The entire City and all critical facilities are susceptible to storm damage. A majority of windstorm damage that occurs is associated with fallen trees/tree limbs. Facilities located in close proximity to large trees may be more susceptible to windstorm damage as a result.

Flood

Hazard Description

Flood events occur whenever water covers what is normally considered dry land. They often occur during heavy precipitation events, when the amount of rainwater exceeds storm drains or flood control channel capacity. Flood event severity depends on the local topography and the ability of the soil in the area to absorb water. Floods can also happen when infrastructure such as levees, dams, or culverts fail. These failures can be linked to precipitation events (e.g., when water erodes a levee, allowing water to escape and flood nearby areas) or be a consequence of other emergency situations (e.g., a dam collapsing due to an earthquake).

The force of a flood is sufficient to carry away large objects and smash them into structures, causing considerable damage to buildings and infrastructure. In severe instances, floodwaters themselves can destroy structures or move them off their foundation. Floods can saturate and weaken soil, potentially making structures built on them more susceptible to damage or collapse. Floods are among the most common types of disaster in California according to the state Multi-Hazard Mitigation Plan, second only to fires. From 1950 to 2012, floods have killed 292 people, more than any other type of disaster. The state has suffered approximately \$4.8 billion in costs due to flooding events.

Hazard History

In the 1800s and early 1900s, South Gate and other communities along the Los Angeles River were subject to frequent and often significant flooding. A major flood in 1914 resulted in the first widespread flood control efforts along the Los Angeles River, which accelerated after a 1938 flood that killed approximately 115 people. The Los Angeles River and other waterways in the area have been largely channelized, which helps to control the rivers but does not remove the risk of flood events. From 1950 to 2012, Los Angeles County had 32 state- and federally declared flood disasters, the second highest of any county in the state. As of 2000, approximately 390,000 people in Los Angeles County lived in areas at elevated risk of flooding.

Risk of Future Hazards

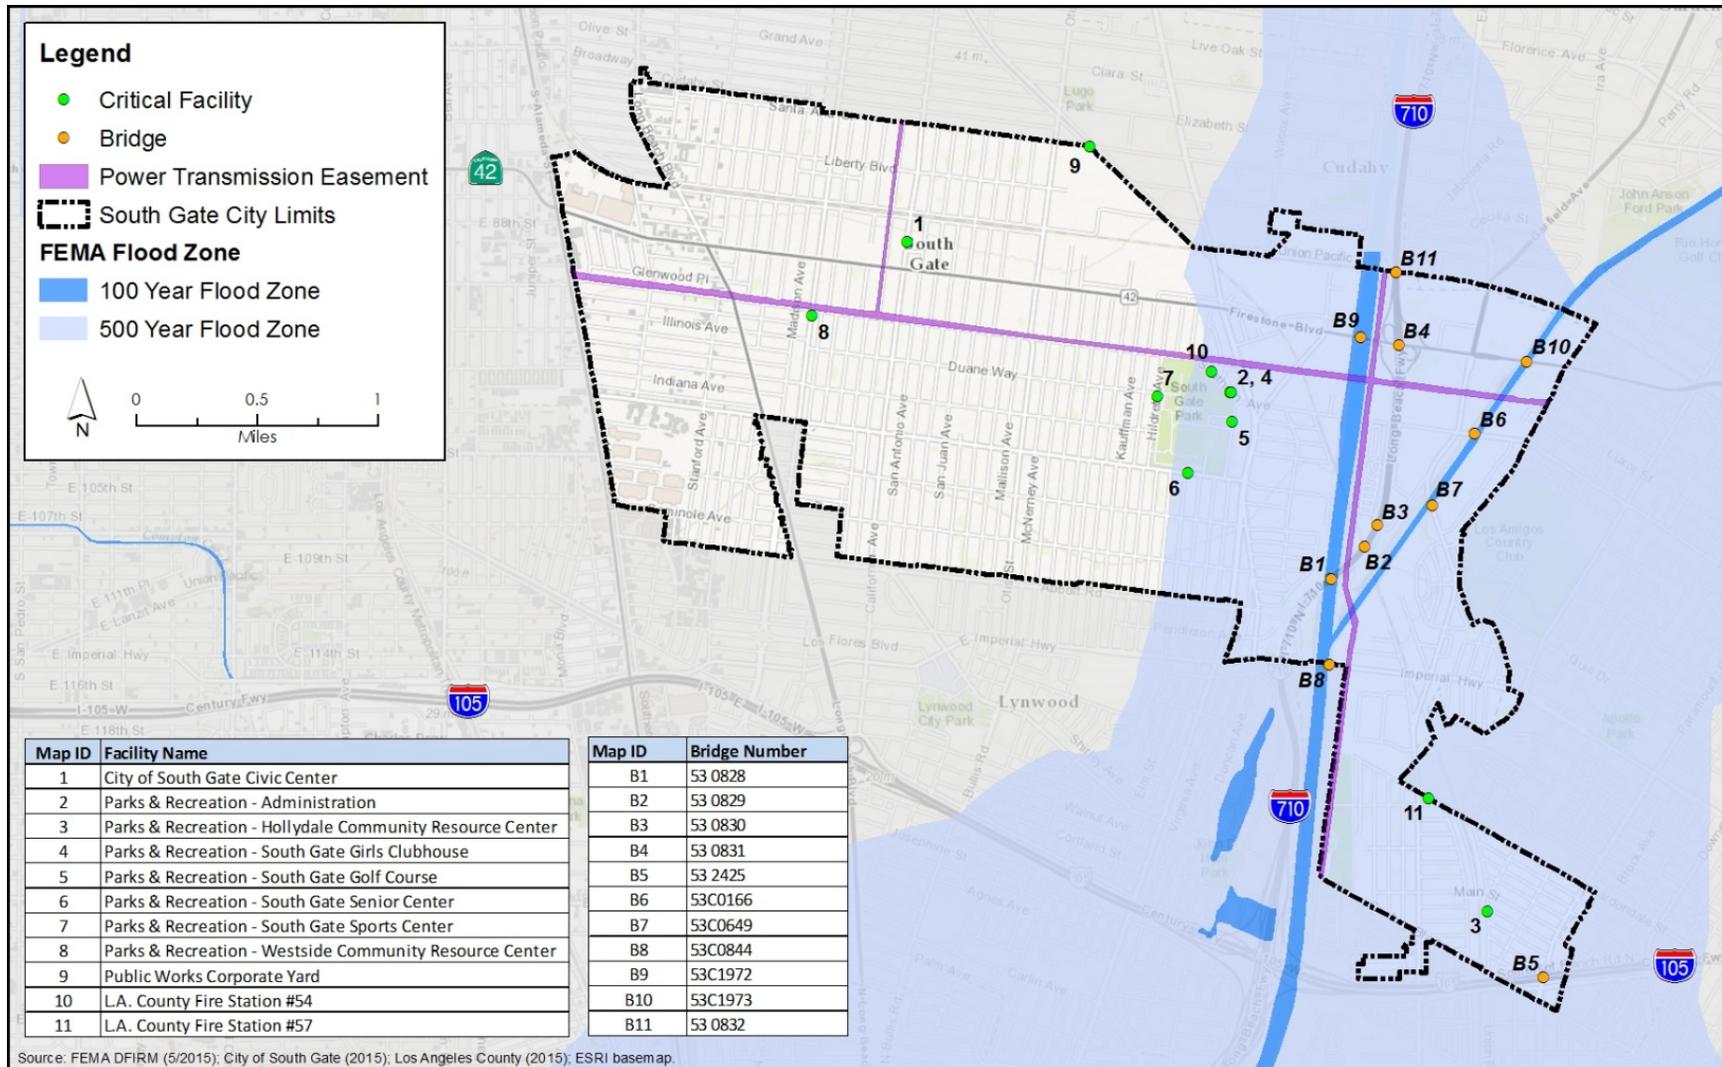

South Gate generally receives an average of 14.5 inches of rainfall a year, although this amount can vary widely from year to year. Like most of California, much of South Gate's rainfall occurs during winter, late autumn, and early spring. On average, the City receives 13.5 inches of rain between November and April, and only about an inch of rain the other half of the year.

Periods of intense rain can happen occasionally in California, usually as a result of a meteorological phenomenon called an “atmospheric river,” which is a narrow band of very moist air that can deliver a strong winter storm. The atmospheric river was likely the cause of the Great Flood of 1862, which caused 35 inches of rain to fall in Los Angeles for four weeks, turned large portions of modern Los Angeles and Orange Counties into shallow lakes, and destroyed an estimated 25 percent of all taxable real estate in California. Scientists have forecasted that a repeat of such an event, known as the ARkStorm scenario, could cause \$400 billion in damage and another \$325 billion in lost economic productivity.¹⁰ Strong storms are also linked to El Niño events, which occur when the surface of the eastern tropical Pacific is warmer than normal and result in various climate extremes around the globe, often including increased precipitation in California.

FEMA flood maps indicate that the eastern portion of South Gate near the Los Angeles River and the Rio Honda drainage channel are at an elevated risk of flooding. The parts of the City east of Jackson Avenue and Burke Avenue are within the 500-year floodplain, meaning that there is a 0.2 percent chance (one in 500) that the area will be subjected to flooding in any given year. The only parts of South Gate within the 100-year floodplain are the Los Angeles River and the Rio Honda drainage channel itself, although land in northeastern Lynwood (immediately south of South Gate) is in the 100-year floodplain. Figure 10 identifies flood zones in the City.

¹⁰ <http://pubs.usgs.gov/of/2010/1312/>

Figure 10. South Gate Flood Zones

There is no content on this page.

Climate Change Considerations

Climate change is expected to cause an overall decrease in precipitation levels and a general increase in drought conditions throughout much of California. However, evidence suggests climate change may also result in an increase in the number of more intense storms. These two changes may contribute to an increased flooding risk. More intensive storms are likely to drop a larger amount of water in a shorter period of time, increasing the risk of the volume of water overwhelming the ability of the soil or infrastructure to drain it away, and thus creating flooding. The overall drier conditions are expected to dry out the soil, which makes it more difficult for water to soak into the ground, further increasing the risk of flooding. It is not yet known if climate change will affect the frequency or severity of El Niño events.

Vulnerability/Risk Assessment

As discussed above and as shown in Figure 10, nearly half of the City is located within the 500-year flood zone, with very small portions, mostly river channels, located in the 100-year flood zone. Seven critical facilities are located in the FEMA 500-year flood plains; no facilities are located within a 100-year flood plain.

Analysis of the flood zone overlays shows that the populated area within 500 feet of a 100-year flood zone is a total of 502 acres. A total of 944 residents (1 percent of the City's total population) would be affected by a 100-year flood not related to dam failure inundation. In addition, 352 employees, or 1 percent of the people that work in South Gate, could be affected. Table 26 at the end of the chapter provides a summary of residents and employees affected by hazard.

Disease/Pest Management

Hazard Description

Disease and pest management hazards are caused by an undesirable organism (insects, bacteria, viruses, etc.) that causes serious harm to plants, animals, or humans. These organisms can threaten human health by infecting people with a number of diseases, some of which are potentially fatal. Pathogenic or disease-carrying organisms may also cause widespread devastation to forests, creating safety hazards and causing environmental damage in addition to economic impacts.

One disease of concern is West Nile virus. Birds are often a host for the virus, which can be spread when a mosquito bites an infected bird and then later bites a person. As a result, many agencies will test the blood of wild or domestic birds to look for the presence of West Nile virus. Approximately 80 percent of people infected with West Nile virus will not show any symptoms, while 20 percent of people will experience fever, nausea, headache, or other symptoms resembling the common cold or a mild case of influenza. In less than 1 percent of infected people, the virus attacks the central nervous system, potentially causing meningitis or encephalitis.

For many urban areas, diseases and pests that impact street trees are a concern, as most types of street trees are susceptible to diseases. Insects called aphids are among the most common pest, sucking sap from the tissue of trees and other plants. This can weaken the tree by depriving it of nutrients, and may also introduce other pathogens such

as fungi or viruses. Another type of insect, the bark beetle, burrows into the inner bark of trees, weakening and often killing them. At times, massive outbreaks of bark beetles can kill vast swaths of forests. A fungal disease called sudden oak death has devastated a large number of oak trees in California and Oregon. Since it was first observed in 1995, it is estimated to have killed over 100 million trees, primarily in the coastal areas of Central and Northern California.

Hazard History

Since the predominant strains of influenza and their virulence change each year, the number of influenza cases also changes significantly each year. In the most recent flu pandemic of 2009–2010, confirmed cases of influenza killed 135 people in Los Angeles County and sent another 247 people to intensive care units. By contrast, in the following 2010–2011 flu season, 10 people died and another 3 required intensive care. In the 2013–2014 flu season, Los Angeles County saw 83 deaths and another 27 intensive care patients. Specific numbers for South Gate are not available.

The number of West Nile virus cases also varies substantially from year to year. The virus first appeared in California in 2003, and had been observed in all counties in the state by 2004. As of the end of 2014, California had reported 4,805 cases of West Nile virus, with 176 fatalities. In 2014, Los Angeles County saw 253 human cases of the disease, although the number of cases in South Gate is unavailable. As of July 2015, one swimming pool in South Gate has tested positive for mosquitoes infected with West Nile virus.

In South Gate, the predominant type of street tree is sycamore, which is vulnerable to various diseases and pests. A fungal disease called anthracnose or sycamore blight can affect California sycamores, as well as a number of other trees. Although it generally does not kill the tree or cause permanent damage on its own, it does cause the trees to shed leaves, which can weaken the tree and make it more susceptible to other diseases or pests. The disease has infected trees throughout the Los Angeles area, and appears to be more common in years with a wet late winter or spring.

Risk of Future Hazards

A number of preventative actions can reduce the risk of diseases such as influenza and West Nile virus. Vaccination and basic hygiene can significantly decrease the odds of a person catching influenza. Similarly, individuals can reduce the risk of mosquito bites (and by extension, the risk of West Nile virus), by draining pools of stagnant water, using screens and protective clothing, and wearing insect repellent. However, eradicating these diseases is extremely unlikely in the short term. It is likely that they will continue to affect South Gate and surrounding communities. While various health organizations and scientific outlets have spoken about the risk of pandemics, it is difficult to say to what extent South Gate specifically may be at risk from any future pandemic events.

It is also likely that anthracnose will continue to infect trees in South Gate. While fungicides are available to control the spread of the disease, they can be very toxic and may not be the best choice in all instances. While the City and property owners may not be able to eradicate anthracnose and other tree diseases or pests, basic preventative measures such as inspections, quarantines, and monitoring, in coordination with the Los Angeles County Agricultural Commissioner's office, can help to minimize their impact.

Climate Change Considerations

There is no firmly established link between climate change and influenza. However, as the influenza virus changes rapidly, it is possible that changes in animal migration patterns or other factors brought on by climate change may create additional opportunities for the virus to mutate, potentially into more virulent forms. Climate change is expected to cause a rise in West Nile virus, as warmer temperatures mean that mosquitoes are likely to remain more active for a longer period of the year, increasing the opportunities for infected mosquitoes to bite people.

The changes in temperature and precipitation brought on by climate change may make conditions more favorable for certain pests or pathogens. For example, decreases in precipitation linked to climate change are making pine trees drought-stressed throughout wide areas of the western United States, increasing their vulnerability to pests such as the bark beetle. It is possible that trees in South Gate and the wider Los Angeles area may become more susceptible to diseases or pest infestations as a result.

Vulnerability/Risk Analysis

The entire City of South Gate is vulnerable to influenza, the West Nile virus, and certain tree diseases. South Gate does not have any unique conditions that make the community more or less vulnerable to the impacts of these diseases.

Dam Failure

Hazard Description

Dam failure occurs when a dam is damaged, partially or completely compromising its ability to hold back water. This can occur as a result of earthquakes or other seismic activity, erosion of the dam face or foundation, or rapidly rising floodwaters that weaken the dam or overwhelm its capacity to drain excess water, or if the rock or ground the dam is built on is flawed. Dam failure can also occur as a result of human error, such as construction or design flaws that were not properly addressed. Dam failure results in sudden, fast-moving floods that can damage or destroy property, cause injury or loss of life, and displace large numbers of people in the flood's path. A dam failure event can also damage regional infrastructure such as transportation and energy networks, causing impacts outside of the immediate inundation zone.

The US Army Corps of Engineers has developed a five-degree rating system for dam safety, called the Dam Safety Action Classification (DSAC) system, shown in Table 23.

Table 23. Dam Safety Action Classification System

DSAC Rating	Description
DSAC-I	Very High Urgency: Progression toward failure is confirmed to be taking place under normal operations, and the dam is almost certain to fail under normal operations without intervention within a few years, potentially immediately. Alternatively, the life or economic consequences given the probability of failure is extremely high.
DSAC-II	High Urgency: Failure could begin under normal operations or as the result of an event, and the likelihood of failure before intervention is too high to assure public safety. Alternatively, the life or economic consequences given the probability of failure is very high.
DSAC-III	Moderate Urgency: The dam has issues indicating that it is significantly inadequate. Alternatively, the life or economic consequences given the probability of failure is moderate to high.
DSAC-IV	Low Urgency: The dam has issues indicating that it is inadequate and it may not meet all essential engineering guidelines. However, the life, economic, and/or environmental consequences given the probability of failure is low.
DSAC-V	Normal: The dam is considered adequately safe and meets all essential guidelines. The risk is considered tolerable.

Source: US Army Corps of Engineers, <http://www.usace.army.mil/Missions/CivilWorks/DamSafetyProgram/ProgramActivities.aspx>

Hazard History

Dam failure events are very rare, as dams that are large enough to hold back massive quantities of water are designed to very high safety standards. During floods, dam operators will often release more water than normal from the dam, reducing the risk of incoming water exceeding the dam’s capacity. Nevertheless, the Los Angeles region has experienced dam failures before. In 1928, the St. Francis Dam, constructed approximately 45 miles northwest of South Gate as part of the Los Angeles Aqueduct system, failed catastrophically due to weak foundations and a leak which had eroded part of the dam structure; modern analysis suggests a landslide may also have been involved. The collapse caused a wave of water as high as 140 feet, which steadily decreased as it rushed 54 miles to the ocean over a period of 5.5 hours. The disaster killed an estimated 431 people (although some estimates are over 600), damaged several towns, and knocked out power to parts of the San Fernando Valley and downtown Los Angeles. In 1963, the Baldwin Hills Dam approximately 10 miles northwest of South Gate experienced a partial collapse due to geologic conditions. The resulting flood killed 5 people and destroyed 277 homes.

Risk of Future Hazards

All of South Gate is within the potential dam inundation zone for at least one dam. Hansen Dam, which was built in 1940 as a flood control measure in response to the Los Angeles River floods of 1938, threatens the largest portion of the City; all of South Gate except for the extreme northeastern corner near the South Gate Town Center shopping center is within the Hansen Dam inundation zone. Hansen Dam is located approximately 23 miles northwest of South Gate, in the San Fernando Valley. The US Army Corps of Engineers gives Hansen Dam a DSAC-III rating. Due to this rating, the dam’s

Emergency Action and Notification Plan is updated annually, and special inspections are triggered if the water level reaches a certain height. Hansen Dam's DSAC rating and breadth of inundation zone make it the primary dam failure hazard in South Gate.

The part of South Gate near the Los Angeles River and Rio Honda drainage channel is within the inundation zone for the Whittier Narrows Dam, located on the San Gabriel River approximately 7 miles northeast of South Gate in the City of Montebello. The gates of Whittier Narrows Dam are normally left open and so there is no reservoir behind the dam that could cause an emergency if the dam fails; the dam's gates are only closed and a reservoir allowed to build during flood events. The dam is rated DSAC-II.

A third dam, Garvey Dam, threatens a relatively small part of northeastern South Gate. It is located 8 miles northeast of South Gate in Monterey Park, and is operated by MWD. While current safety information is not available, earthquakes caused cracks to appear in the reservoir, which resulted in flooding several nearby homes in 1989. Figure 11 illustrates South Gate's dam failure inundation zones.

Climate Change Considerations

Climate change is expected to cause more frequent periods of intense precipitation, leading to a potential rise in flood events. It is possible that floodwaters may damage dams or erode the ground that they are built on, increasing the risk of dam failure.

Vulnerability/Risk Assessment

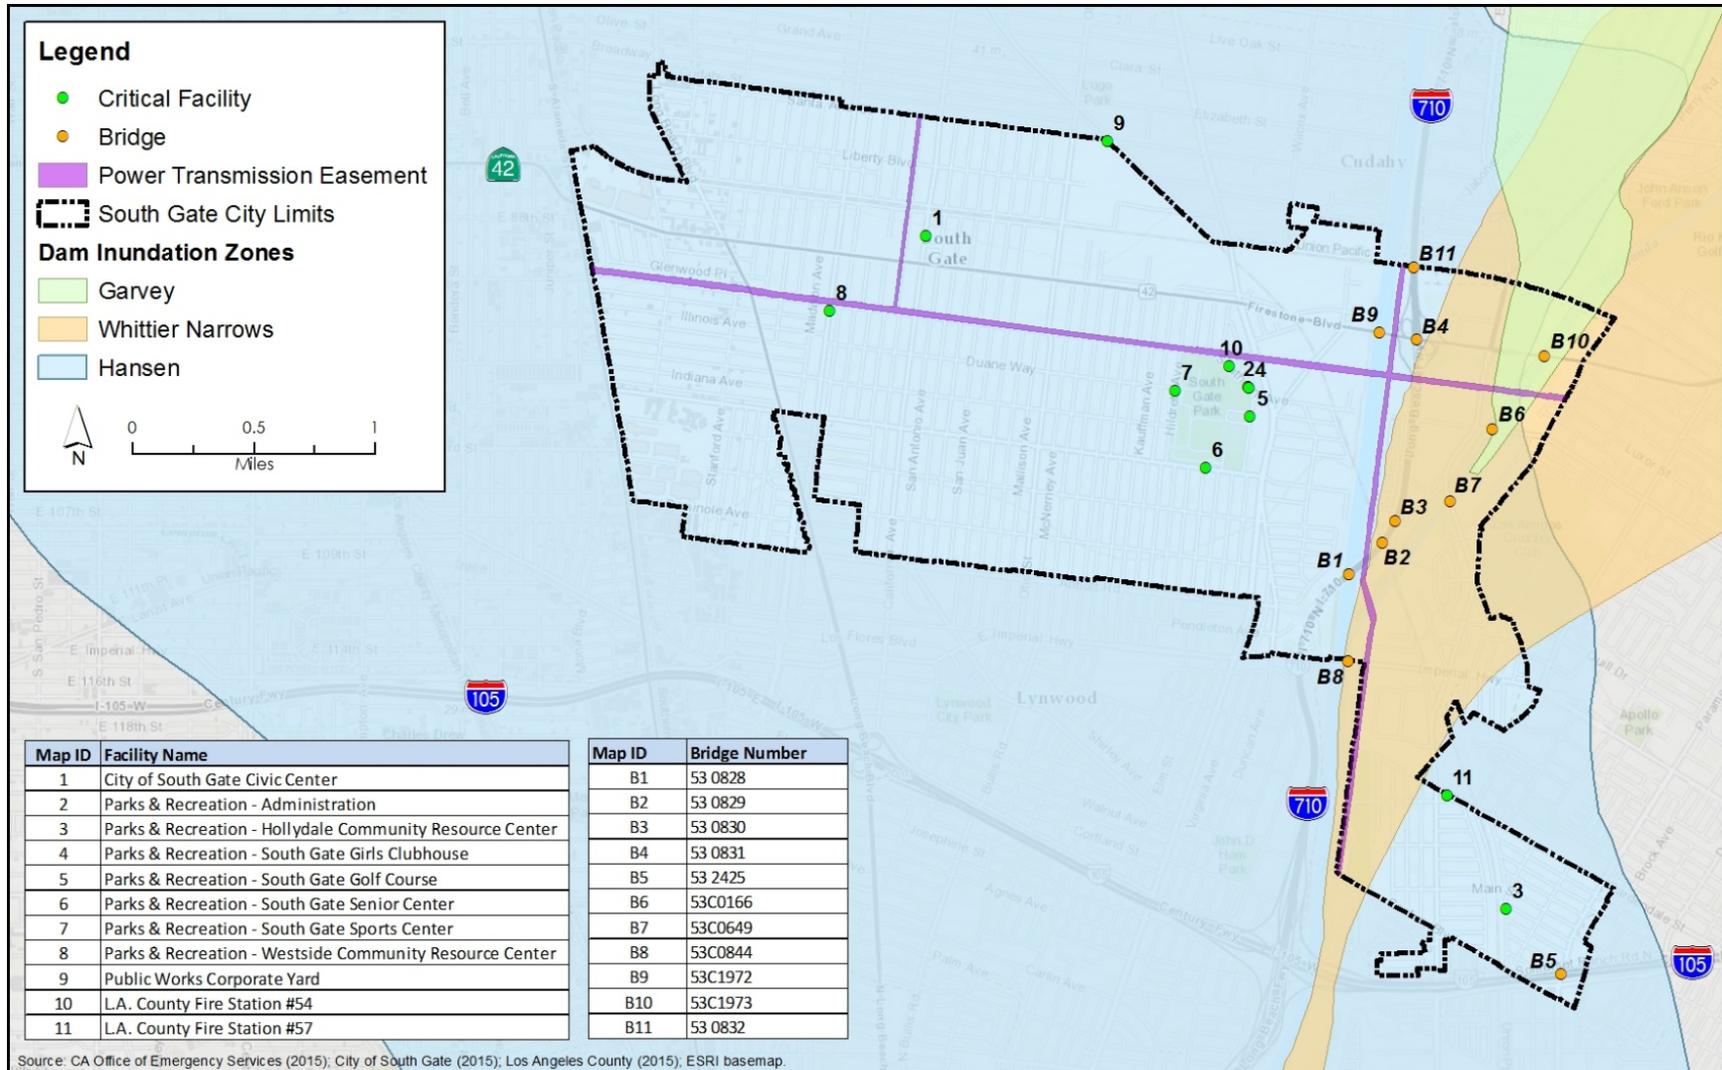

As noted in Table 24, all critical facilities in the City could be inundated as a result of dam failure. The total potential loss shown in the table is based on the assumption that structures are completely destroyed. It should be noted that this assumption is the best available, and intended to be a conservative estimate. However, complete facility destruction is unlikely given the City's proximity to the dams.

Table 24. South Gate Critical Facilities at Risk of Inundation from Dam Failure

Map Number	Facility Name	Replacement Value	Contents Value	Potential Loss
1	City of South Gate Civic Center	\$18,942,341	\$2,399,619	\$21,341,960
2	Parks & Recreation - Administration	\$5,527,027	\$343,609	\$5,870,636
3	Parks & Recreation - Hollydale Community Resource Center	\$1,063,646	\$199,154	\$1,262,800
4	Parks & Recreation - South Gate Girls Clubhouse	\$2,547,566	\$143,044	\$2,690,610
5	Parks & Recreation - South Gate Golf Course	\$135,221	\$19,645	\$154,866
6	Parks & Recreation - South Gate Senior Center	\$1,369,861	\$87,801	\$1,457,662
7	Parks & Recreation - South Gate Sports Center	\$19,078,910	\$597,246	\$19,676,156
8	Parks & Recreation - Westside Community Resource Center	Not available	Not available	Not available
9	Public Works Corporate Yard	\$11,319,189	\$2,383,013	\$13,702,202
10	L.A. County Fire Station #54	Not available	Not available	Not available
11	L.A. County Fire Station #57	Not available	Not available	Not available
Total Potential Losses		\$59,983,761	\$6,173,131	\$66,156,892

Analysis of the dam inundation overlay shows that the populated area vulnerable to inundation as a result of dam failure is a total of 4,706 acres. A total of approximately 95,000 residents (100 percent of the City’s total population) could be affected in the event of dam inundation. In addition, 37,816 employees, or 100 percent of the people that work in South Gate, could be affected. Table 26 at the end of the chapter provides a summary of residents and employees affected by hazard.

Figure 11. South Gate Dam Failure Inundation Zones

3.5 Vulnerability Summary

Table 25 shows a summary of critical facilities that intersect with hazard areas in the City of South Gate. Those facilities that intersect with a hazard area are indicated with a “Y” and a red-shaded cell. Facilities that do not fall within the hazard area are designated by an “N” and a blue-shaded cell. The risks of drought, extreme heat, severe weather, and disease and pest management hazards are equal throughout the community and, as a result, hazard and critical facility overlays were not conducted for these profiles. Overlays were conducted for seismic hazards (including liquefaction), hazardous materials, flood, and dam failure.

Table 26 shows the populated area by acreage potentially affected, broken out by hazard, and the number of residents and employees that would potentially be affected by each hazard based on the hazard locations mapped throughout this document.

Significant Hazards

The vulnerability/risk assessments in each hazard profile are used to understand the varying levels of risk to critical facilities in the City of South Gate. Based on these assessments, the planning team concluded that the hazards that pose the greatest risk to the City are drought, seismic hazards, extreme heat, and severe weather.

Table 25. Risk Assessment Summary Table

Facility	Drought	Seismic Hazards (Liquefaction)	Extreme Heat	Hazardous Materials (500 ft of hazmat site)	Severe Weather (Wind)	Flood (500 ft of 100-year floodplain)	Disease / Pest Management	Dam Failure
1 City of South Gate Civic Center	Y	Y	Y	Y	Y	N	Y	Y
2 Parks and Recreation - Administration	Y	Y	Y	Y	Y	N	Y	Y
3 Parks and Recreation - Hollydale Community Resource Center	Y	Y	Y	N	Y	N	Y	Y
4 Parks and Recreation - South Gate Girls Clubhouse	Y	Y	Y	Y	Y	N	Y	Y

	Facility	Drought	Seismic Hazards (Liquefaction)	Extreme Heat	Hazardous Materials (500 ft of hazmat site)	Severe Weather (Wind)	Flood (500 ft of 100-year floodplain)	Disease / Pest Management	Dam Failure
5	Parks and Recreation - South Gate Golf Course	Y	Y	Y	N	Y	N	Y	Y
6	Parks and Recreation - South Gate Senior Center	Y	Y	Y	N	Y	N	Y	Y
7	Parks and Recreation - South Gate Sports Center	Y	Y	Y	N	Y	N	Y	Y
8	Parks and Recreation - Westside Community Resource Center	Y	Y	Y	N	Y	N	Y	Y
9	Public Works Corporate Yard	Y	Y	Y	Y	Y	N	Y	Y
10	L.A. County Fire Station #55	Y	Y	Y	Y	Y	N	Y	Y
11	L.A. County Fire Station #57	Y	Y	Y	Y	Y	N	Y	Y
Y denotes that the critical facility intersects the hazard layer					N denotes that the critical facility does not intersect the hazard layer				

Table 26. Populated Area and Number of Residents and Employees Affected

	Drought	Seismic Hazards (Liquefaction)	Extreme Heat	Hazardous Materials (1,000 ft)	Severe Weather (Wind)	Flood (500 ft of 100-year flood zone)	Disease and Pest Mgmt	Dam Failure
Total Populated Area Affected (Acres)	4,706	4,706	4,706	2,868	4,706	502	4,706	4,706
Total Number of Residents Affected (% of City population)	95,000 (100%)	95,000 (100%)	95,000 (100%)	48,288 (51%)	95,000 (100%)	944 (1%)	95,000 (100%)	95,000 (100%)
Total Number of Employees Affected	37,816 (100%)	37,816 (100%)	37,816 (100%)	19,026 (50%)	37,816 (100%)	352 (1%)	37,816 (100%)	37,816 (100%)

Potential Losses

Table 27 ranks the critical facilities by value (combination of building replacement and contents value) in the City. Should a hazard completely destroy these facilities, their replacement will be the most costly compared to other critical facilities identified in Appendix C.

Table 27. Most Costly South Gate Critical Facilities

Map Number	Facility	Total (Replacement and Contents) Value*
1	City of South Gate Civic Center	\$21,341,960
7	Parks & Recreation South Gate Sports Center	\$19,676,156
9	Public Works Corporate Yard	\$13,702,202
2	Parks & Recreation - Administration	\$5,870,636
4	Parks & Recreation - South Gate Girls Clubhouse	\$2,690,610
6	Parks & Recreation - South Gate Senior Center	\$1,457,662
3	Parks & Recreation - Hollydale Community Resource Center	\$1,262,800
5	Parks & Recreation - South Gate Golf Course	\$154,866
8	Parks & Recreation - Westside Community Resource Center	Not available
10	L.A. County Fire Station #54	Not available
11	L.A. County Fire Station #57	Not available

*Replacement value information based on City-insured values for each facility.

CHAPTER 4: MITIGATION ACTIONS

Hazard mitigation measures are strategies and policies to reduce the impacts of hazard events on South Gate residents, businesses, public infrastructure, and facilities. This section of the Plan is informed by the physical and socioeconomic conditions in South Gate, as well as the scope and severity of potential hazard events. These measures also support implementation of regional emergency plans, including the Los Angeles County 2014 All-Hazard Mitigation Plan.

4.1 Hazard Mitigation Overview

National Flood Insurance Program

In 1968, the US Congress created the National Flood Insurance Program (NFIP) to help reduce the economic impacts of flood emergencies. Communities that elect to participate in the NFIP agree to develop policies to reduce flooding risks in flood-prone areas. In exchange, the federal government makes flood insurance available to landowners in participating communities.

The City of South Gate participates in the NFIP, and development in the flood plain is governed by the City's floodplain management ordinance (Title 7, Chapter 7.47 of the South Gate Municipal Code). Under this ordinance, all new construction in flood hazard areas must comply with special development standards (as defined in the ordinance) to reduce the risk of damage from flooding.

Communities participating in the NFIP may elect to participate in another voluntary program called the Community Rating System (CRS), which was established in 1990. Communities which participate in the CRS agree to take further steps to reduce flood damage, support NFIP insurance, and develop a comprehensive floodplain management effort. Communities receive a rating for these efforts, from 10 to 1 (with 1 being the best). If the community's rating is 9 or better, NFIP policy holders in the community receive a discount on their insurance premiums proportional to the CRS rating, from 5 percent to 45 percent. The City of South Gate does not currently participate in the CRS.

Repetitive Loss Properties

Some properties insured under NFIP are known as "Repetitive Loss Properties", which means that the owners have filed claims for property damage from flooding more than once. At this time, the City of South Gate is not aware of any Repetitive Loss Properties under the NFIP.

Hazard Mitigation Goals

The goals of this Plan, as identified in Section 1.1, establish desired end states in regard to public safety through hazard mitigation in South Gate. These goals guide future activities to reduce risk associated with natural disasters, and serve as checkpoints for the implementation of hazard mitigation actions.

The actions in this Plan are the strategies and policies that the City of South Gate will use to reduce the risk of potential hazards. The LHMP Team developed these measures through data collection efforts, research, and collaboration with members of the public and other agencies. The City may pursue funding to implement these actions, including the use of state and federal grant sources. Some measures work to reduce the risk from multiple hazards, while others are focused on individual hazards.

Cost-Benefit Analysis

FEMA requires that local governments analyze the benefits and costs of mitigation actions. This cost-benefit analysis is used to determine if the benefits to life and property (monetary and nonmonetary) exceed the cost of the mitigation activity. This analysis can assist communities in determining whether a mitigation measure is worth pursuing now, as a way of avoiding future impacts. The cost-benefit analysis relies on the frequency and severity of hazard situations, the future damage or impacts avoided by the measure, and the risk involved.

The cost-benefit analysis in an LHMP should, at minimum, consider the following questions:

- How many people will benefit from the action?
- How large an area of the City is affected?
- How critical are the facilities and infrastructure that benefit from the action?
- Does the action make sense for the community from an environmental perspective?

Hazard Mitigation Action Prioritization (STAPLE/E Analysis)

The LHMP Team reviewed the STAPLE/E (Social, Technical, Administrative, Political, Legal, Economic, Environmental) criteria during mitigation action development, which require that all such considerations be taken into account when considering and prioritizing the most appropriate hazard mitigation actions. This process helps ensure that the hazard mitigation measures in this Plan are the most equitable, cost-effective, and otherwise feasible for South Gate, given the unique physical and socioeconomic conditions in the community. It also incorporates the cost-benefit analysis as required by FEMA. The specific criteria used in the STAPLE/E method are included in Table 28.

Table 28.STAPLE/E Review and Selection Criteria

Issue	Criteria
Social	<ul style="list-style-type: none"> - Is the proposed measure socially acceptable to South Gate and surrounding communities? - Would the measure result in one segment of South Gate and/or surrounding communities being treated unfairly? - Will the measure result in social disruption?
Technical	<ul style="list-style-type: none"> - If fully implemented, is the measure likely to effectively reduce the risk? - Will the measure create more problems than it fixes? - Will the measure reduce a risk from a hazard, or only reduce a symptom of the risk? - Is the measure the most useful course of actions, given South Gate’s goals?
Administrative	<ul style="list-style-type: none"> - Does South Gate have the administrative capabilities to implement the measure? - Is someone available to coordinate and lead measure implementation? - Is there sufficient funding, staff, and technical support for measure implementation? - Are there ongoing administrative requirements that need to be met?
Political	<ul style="list-style-type: none"> - Is the measure politically acceptable? - Is there public support to implement and maintain the measure?
Legal	<ul style="list-style-type: none"> - Does South Gate have the authority to implement the measure? - Are there legal side effects to implement the measure (e.g., could it be construed as a taking?) - Will South Gate be liable for any action or lack of action? - Will the measure face legal challenges?
Economic	<ul style="list-style-type: none"> - What are the economic costs and benefits of the measure, and do the benefits exceed the cost? - Are start-up, maintenance, and administrative costs taken into account? - Has funding for the measure been secured? If not, what are the potential funding sources? - How will the measure affect South Gate’s fiscal capability? - What sort of burden, if any, will the measure place on the local economy or tax base? - What, if any, are the budget and revenue effects of the measure?
Environmental	<ul style="list-style-type: none"> - How will the measure affect the environment? - Will the measure need environmental regulatory approvals? - Will the measure meet local and state regulatory requirements? - Is the measure likely to affect any endangered or threatened species?

4.2 Hazard Mitigation Measures

Table 29 identifies the proposed mitigation actions for South Gate, based on the risk assessment in Chapter 3, the capabilities assessment discussed later in this chapter, the Los Angeles County 2014 All-Hazards Mitigation Plan, discussion among the LHMP Team, and public outreach. This table also identifies the City department responsible for implementation, potential funding source(s), opportunities for integration with other City policy or planning frameworks, the target completion year, and priority ranking for each action. Priority rankings for mitigation actions were developed by the LHMP Team during Meeting #3. At this meeting, Team members used a dot prioritization exercise to establish the priorities identified.

Table 29. Hazard Mitigation Actions

Mitigation Action	Responsible Department	Potential Funding Sources	Policy Integration Opportunities	Target Completion Date	Priority
1. Multiple Hazards					
<p>1.1 Update and expand the City’s Street Tree Master Plan to cover the following topics:</p> <ul style="list-style-type: none"> • Attaining “Tree City USA” designation. • Tree maintenance including canopy and root maintenance with an emphasis on maintaining buffers between canopies and critical infrastructure. • Drought-tolerant and shade-providing tree palettes. • Tree vulnerability to high winds, with direction to replace vulnerable trees with more resilient species. • Mitigating tree pest and disease impacts. • Actions and funding sources expand the City’s shade tree stock. • Best practices for private property plant selection and tree maintenance. <p><i>Hazards mitigated: drought, extreme heat, severe weather</i></p>	Public Works	General Fund, grant funding, development fees	Street Tree Master Plan	2016	High
<p>1.2 Work with utility companies and non-City agencies, including Southern California Edison, Southern California Gas Company, Los Angeles Metro, and telecommunication providers, to harden infrastructure to be more resilient to hazard situations, helping to provide safe service during emergency situations and to quickly fix any service interruptions.</p> <p><i>Hazards mitigated: seismic hazards, severe weather, flood</i></p>	Community Development, Public Works	General Fund	N/A	2017	Medium

Mitigation Action	Responsible Department	Potential Funding Sources	Policy Integration Opportunities	Target Completion Date	Priority
<p>1.3 Expand participation in the NotifyMe program to notify the community in the event of an occurring or imminent hazardous situation, including a need to evacuate. The program should support all commonly spoken languages and can be advertised through multiple methods (door-to-door notifications, phone, television, radio, and online/social media). Coordinate with the Los Angeles County Operational Area for best practices and for consistency with notification systems for surrounding communities.</p> <p><i>Hazards mitigated: drought, seismic hazards, extreme heat, hazardous materials, severe weather, flood, disease/pest management, dam failure</i></p>	City Manager, Police	General Fund, grant funding	N/A	2017	Medium
<p>1.4 Conduct a comprehensive and ongoing education campaign to improve awareness of hazard threats and ways to reduce risks. The campaign should include mailings, in-person workshops and events, and media notifications (television, radio, online/social media, etc.). The campaign should be designed to reach all members of the community, and should include materials in commonly spoken languages in the community, including English and Spanish.</p> <p><i>Hazards mitigated: drought, seismic hazards, extreme heat, hazardous materials, severe weather, flood, disease/pest management, dam failure</i></p>	City Manager, Police	General Fund, grant funding	N/A	2017	Medium

Mitigation Action	Responsible Department	Potential Funding Sources	Policy Integration Opportunities	Target Completion Date	Priority
<p>1.5 Update all emergency-related planning documents every five years to ensure consistency with state and federal law, best practices, local conditions, and recent science. Integrate the hazards research findings and actions in this Local Hazard Mitigation Plan with all City emergency planning efforts and programs.</p> <p><i>Hazards mitigated: drought, seismic hazards, extreme heat, hazardous materials, severe weather, flood, disease/pest management, dam failure</i></p>	Community Development and Police Department	General Fund, grant funding	Emergency Operations Plan, Hazard Mitigation Plan, Safety Element	2017	Medium
<p>1.6 Adopt, implement, and actively enforce the current state building code.</p> <p><i>Hazards mitigated: drought, seismic hazards, extreme heat, flood</i></p>	Community Development	General Fund, development fees	Municipal Code	Ongoing	Low
<p>1.7 Adopt a policy to avoid siting new critical public facilities and infrastructure in areas of elevated vulnerability to flooding and seismic hazards. If siting such facilities in areas of elevated vulnerability is unavoidable, design facilities to remain operable during emergency situations to the greatest extent feasible.</p> <p><i>Hazards mitigated: seismic hazards, flood</i></p>	City Manager	General Fund, bonds, Capital Improvement funds	N/A	2019	Low
<p>1.8 Coordinate with LA County Public Works to designate Firestone Boulevard as an official County Disaster Route.</p> <p><i>Hazards mitigated: seismic hazards, hazardous materials, severe weather, flood, dam failure</i></p>	Public Works	General Fund	N/A	2019	Low

Mitigation Action	Responsible Department	Potential Funding Sources	Policy Integration Opportunities	Target Completion Date	Priority
1.9 Monitor and pursue hazard mitigation funding opportunities. <i>Hazards mitigated: drought, seismic hazards, extreme heat, hazardous materials, severe weather, flood, disease/pest management, dam failure</i>	Community Development, Police, Public Works	General Fund	N/A	Ongoing	Low
2. Drought					
2.1 Identify and pursue alternative sources of water in coordination with WRD to support potential shortages of deliveries from the Metropolitan Water District.	Public Works	Water Funds	N/A	Ongoing	Medium
2.2 Work with regional partners, including the Los Angeles Unified School District and the Central Basin Water District, to develop a recycled water master plan, with the intention of identifying financially feasible approaches to expanding recycled water infrastructure throughout the City.	Public Works	Water Funds	N/A	2019	Low
2.3 Construct additional or upgrade existing water storage/ conveyance facilities.	Public Works	Water Funds	N/A	2019	Low
2.4 Offer reduced-cost or free water audits for residents and businesses.	Public Works	Water Funds	N/A	Ongoing	Low
2.5 Publicize available rebates and other financial incentives for equipment that reduces water use.	Public Works	Water Funds	N/A	Ongoing	Low
2.6 As part of discretionary review, encourage new residential buildings in a recycled water service area to include dual plumbing for potable and nonpotable water sources.	Community Development	Water Funds	Project Review Process	Ongoing	Low
2.7 Continue retrofitting publicly landscaped areas with artificial turf or drought-tolerant landscaping.	Parks and Recreation, Public Works	Water Funds	N/A	Ongoing	Low

Mitigation Action	Responsible Department	Potential Funding Sources	Policy Integration Opportunities	Target Completion Date	Priority
2.8 Require Urban Water Management Plan updates to consider more severe and long-lasting drought scenarios.	Public Works	Water Funds	Urban Water Management Plan	2017	Low
3. Seismic Hazards					
3.1 Retrofit City-owned facilities and infrastructure, including water storage tanks, to increase resiliency to seismic hazards and to remain operable immediately after seismic events.	City Manager, Public Works	General Fund, bonds, Capital Improvement funding	N/A	2017	High
3.2 If deemed necessary, conduct a seismic study for public buildings and infrastructure and retrofit facilities based on findings and available funding.	Community Development, Public Works	General Fund, grant funding	N/A	2018	Medium
3.3 Conduct a seismically vulnerable private building inventory, with a focus on unreinforced masonry and “soft-story” buildings, and develop a prioritized list of recommended phasing for retrofits.	Community Development	General Fund, grant funding, development fees	N/A	2018	Medium
3.4 Adopt a phased ordinance for seismic retrofits to require existing unreinforced buildings to meet current seismic standards. Identify and secure to the extent possible funding to assist property owners with retrofit costs.	Community Development	General Fund, development fees	Municipal Code	2018	Medium
3.5 In coordination with state and regional agencies, conduct seismic evaluations of infrastructure owned by other agencies in the City, including electrical wires and natural gas pipelines, and identify funding sources to conduct seismic retrofits of vulnerable infrastructure.	Public Works	General Fund	N/A	2018	Medium

Mitigation Action	Responsible Department	Potential Funding Sources	Policy Integration Opportunities	Target Completion Date	Priority
4. Extreme Heat					
4.1 On public facilities, conduct energy-efficiency audits, retrofit buildings to increase efficiency, and install solar panels to reduce demand on the electrical grid (increasing its resiliency during heat waves) and to save money and generate municipal revenue.	City Manager, Public Works	General Fund, grant funding, bonds, Capital Improvement funding	N/A	2017	Medium
4.2 Encourage solar panels on new and existing developments by widely publicizing available incentives and financing options, working with local PACE providers to expand outreach to lower-income and non-English-speaking neighborhoods, and participating in programs to reduce the cost of solar panels for residents.	Community Development	General Fund	N/A	2017	Medium
4.3 Require new nonresidential and multifamily development to incorporate high-reflectivity roofing and surface materials, shade trees, shade structures, and/or other infrastructure features to reduce human exposure to extreme heat and to mitigate the urban heat island effect.	Community Development	General Fund, development fees	Municipal Code	2017	Medium
4.4 Upon discretionary review for significant remodels, require owners of existing parking lots to install infrastructure features to increase shade and reduce the urban heat island effect.	Community Development	General Fund, development fees	Project Review Process	2017	Medium
4.5 Work with community groups to identify and secure funding to install energy-efficient air conditioner units for homes without AC access, particularly for homes of lower-income residents, the elderly, and persons with disabilities.	Community Development	General Fund, grant funding	N/A	2019	Low

Mitigation Action	Responsible Department	Potential Funding Sources	Policy Integration Opportunities	Target Completion Date	Priority
4.6 Educate all outdoor City workers, including construction, landscaping, maintenance, and recreation staff, about the risks posed by extreme heat and how to reduce them.	Administrative Services	General Fund	N/A	2019	Low
4.7 Include extreme heat as a hazard in the City's Emergency Operations Plan with clear guidelines to: <ul style="list-style-type: none"> • Designate public buildings and other community facilities as cooling centers that are easily accessible by all residents in all parts of South Gate, including individuals with limited mobility. • Distribute information about cooling centers. • Establish a temperature threshold as a minimum standard for opening and operating cooling centers. 	Police	General Fund	Emergency Operations Plan	2019	Low
5. Hazardous Materials					
5.1 As part of the development review process, require all hazardous material storage tanks meet or exceed all required and recommended safety standards, including resiliency to natural hazards such as flooding and seismic hazards.	Community Development	General Fund, development fees	Project Review Process	2017	Medium
5.2 Consult with Union Pacific Railroad (UPRR) on potential land use issues and safety concerns associated with the railroad rights-of-way in the City. As part of the consultation, UPRR should provide the City with its emergency response and recovery plans for assets located in the City.	Community Development	General Fund	N/A	2017	Medium

Mitigation Action	Responsible Department	Potential Funding Sources	Policy Integration Opportunities	Target Completion Date	Priority
5.3 As part of the development review process, continue to require soil testing for hazardous materials prior to construction activity, and to deny permits if risks from any hazardous materials are not mitigated to a generally safe level.	Community Development	General Fund, development fees	Project Review Process	2019	Low
5.4 Review the zoning ordinance and map and amend allowed uses to prevent siting facilities which may manufacture, store, use, transport, or allow hazardous materials near residential areas or other sensitive uses.	Community Development	General Fund	Municipal Code; Zoning Map	2019	Low
6. Flooding					
6.1 Upgrade storm drain infrastructure in areas that frequently pond during strong rains.	Public Works	General Fund, bonds, Capital Improvement funding	N/A	Ongoing	High
6.2 Analyze the flood potential associated with elevated reservoir failure in the community.	Community Development, Public Works	General Fund	N/A	2017	High
6.3 Monitor the effectiveness of current requirements for new developments to handle stormwater on-site, to the extent possible, through the use of permeable paving and other low-impact development strategies, and update the requirements as needed.	Community Development, Public Works	General Fund, development fees	N/A	2017	Medium
6.4 Retrofit public spaces to reduce stormwater runoff, including using permeable paving for sidewalks and parking lots.	Public Works	General Fund, bonds, Capital Improvement funding	N/A	Ongoing	Medium
6.5 Provide educational materials to existing property owners about the benefits of installing low-impact development stormwater components.	Public Works	General Fund	N/A	2018	Low

Mitigation Action	Responsible Department	Potential Funding Sources	Policy Integration Opportunities	Target Completion Date	Priority
6.6 Continue to participate in the National Flood Insurance Program and maintain an effective and up-to-date Flood Plain Management Ordinance.	Community Development	General Fund	N/A	Ongoing	Low
6.7 Continue and expand the regular cleaning and maintenance of City storm drains to ensure they are functioning at full capacity.	Public Works	General Fund, Capital Improvement funding	N/A	Ongoing	Low
6.8 Continue requiring new development projects to reduce potential and existing flooding hazards as part of the development process.	Community Development	General Fund, development fees	Project Review Process	Ongoing	Low
7. Severe Weather					
7.1 Design future key infrastructure to withstand severe weather events beyond minimum code specifications.	City Manager	General Fund, bonds, Capital Improvement funding	N/A	2019	Low
7.2 Monitor trees and other vegetation near power lines, and promptly inform utility companies if any vegetation may threaten power service during severe weather and/or requires trimming.	Public Works	General Fund	N/A	Ongoing	Low
8. Disease and Pest Management					
8.1 Coordinate with the Los Angeles County Department of Public Health to ensure South Gate residents have access to affordable flu vaccinations, and that community members are notified about the availability of flu vaccines.	City Manager	General Fund	N/A	2019	Low

Mitigation Action	Responsible Department	Potential Funding Sources	Policy Integration Opportunities	Target Completion Date	Priority
8.2 Work with the Greater Los Angeles County Vector Control District to implement pest management strategies to reduce health risks from disease vectors, to treat/reduce areas of standing water where mosquitoes may breed, and to support additional mosquito mitigation actions as needed.	City Manager	General Fund	N/A	2019	Low
9. Dam Inundation					
9.1 Work with the US Army Corps of Engineers and the Metropolitan Water District to support retrofit activities for dams that may pose an inundation risk for South Gate.	Community Development, Public Works	General Fund	N/A	2017	Medium

4.3 Capabilities Assessment

The capabilities assessment identifies existing local agencies, personnel, planning tools, public policy and programs, technology, and funding resources that can support the hazard mitigation measures in this Plan. This assessment helps determine the current ability of South Gate to reduce damage from hazard events, providing a foundation to develop, consider, and prioritize future hazard mitigation measures.

Key Resources

Table 30 summarizes the existing capabilities available to support the City’s implementation of mitigation actions.

Table 30. South Gate Capabilities Assessment

Supporting Resource Type	Supporting Resource Name	Ability to Support Local Hazard Mitigation Activities
Personnel	Police Department staff	Staff helps to develop and implement actions to improve emergency preparedness, including conducting education and outreach. Staff also conducts emergency response activities and contributes to disaster recovery.
Personnel	Code Enforcement Division staff	The Code Enforcement Division works to ensure that all property in the city complies with adopted codes. This includes ensuring that property in South Gate meets or exceeds minimum standards for safety and resiliency to hazards.
Personnel	Building and Safety Division staff	Staff reviews all proposals for new development in South Gate to ensure it meets all applicable laws and ordinances. As part of this review process, staff can ensure that new development complies with all hazard-related requirements.
Personnel	South Gate Housing Authority staff	Staff helps residents find and maintain decent and affordable housing in South Gate, including housing that meets minimum safety requirements.
Personnel	Planning Commission	The South Gate Planning Commission meets twice a month to review land use, development, planning, and environmental issues. The body can approve and guide development of new projects, as well as new policies related to land use issues.
Personnel	City Council	The South Gate City Council meets twice a month and serves as the primary legislative body for the community. The City Council can establish and revise laws, approve plans and policy directions, and allocate funding.
Personnel	City Manager	The City manager allocates and manages City resources to carry out City policy and operations as directed by the City Council, including allocating and managing staff and funding to support implementation of hazard mitigation activities.
Personnel	Finance Department staff	Finance Department staff monitors and analyzes City revenue and expenses, and drafts budget documents in accordance with City Council directions. This can include proposing funds for hazard mitigation activities and securing funding for these activities from external sources, such as state and federal grants.

Supporting Resource Type	Supporting Resource Name	Ability to Support Local Hazard Mitigation Activities
Personnel	Public Works Department staff	Staff in the Public Works Department is responsible for building and maintaining South Gate’s publicly owned infrastructure, including the City’s water service. Staff can construct and retrofit infrastructure to reduce hazard risks in the community, or to be more resilient to hazard events.
Personnel	Human Resources Division staff	The Human Resources/Risk Management Division is responsible for establishing policies related to City personnel, including training on hazard events, emergency response protocols, and hazardous materials.
Personnel	City Attorney	The City Attorney reviews proposed ordinances and resolutions, and ensures that City activities (including hazard mitigation actions) comply with all applicable laws.
Personnel	Waste Management, Inc. staff	The City contracts with Waste Management to provide collection and disposal services for solid waste in the community. The responsibilities of Waste Management staff include providing services for the safe disposal of some types of hazardous material.
Personnel	Southern California Edison staff	Southern California Edison is responsible for providing safe and reliable electricity to South Gate community members. Staff responsibilities include restoring electrical service if it has been interrupted by an emergency situation, and repairing and maintaining electrical infrastructure to reduce the risk of hazard events.
Personnel	Southern California Gas Company staff	The Southern California Gas Company provides natural gas service in South Gate. Staff is responsible for maintaining the natural gas infrastructure in safe conditions to minimize the risk of leaks, fires, or explosions. This includes repairing natural gas infrastructure following emergency situations.
Personnel	Los Angeles County Fire Department staff	The Los Angeles County Fire Department provides fire services to South Gate. Staff is responsible for conducting safety training and preparedness activities, responding to emergency situations, and supporting emergency recovery. Staff also responds to hazardous material emergencies and conducts activities to reduce the risk of hazardous material-related events.
Plan	General Plan	The General Plan is the main policy document for development and change in South Gate. It identifies the overarching policies and programs that affect land use, public services, housing, natural resources, and safety, among other items. The General Plan can be updated to include information and mitigation measures identified in this Plan.
Plan	Urban Water Management Plan	The South Gate Urban Water Management Plan identifies the community’s current and forecasted water sources and demands and discusses supply reliability and contingency planning, demand management, and recycled water. In accordance with state law, the plan is updated every five years.

Supporting Resource Type	Supporting Resource Name	Ability to Support Local Hazard Mitigation Activities
Plan	South Gate Emergency Operations Plan	Overall emergency management plan for the City of South Gate that identifies the procedures and protocols for disaster and emergency situations within the City and roles and responsibilities for City Departments/Personnel to assist with response activities.
Plan	Los Angeles County Operational Area Emergency Response Plan	This plan establishes the protocols for responding to emergency situations in Los Angeles County, including how South Gate staff should coordinate response activities with other jurisdictions. The plan works to reduce loss of life, injuries, and property damage during and immediately after emergency situations.
Plan	Los Angeles County All-Hazard Mitigation Plan	This plan identifies hazards and establishes mitigation activities for unincorporated areas of Los Angeles County and for County agencies (including the Los Angeles County Fire Department, which provides services to South Gate).
Policy	Floodplain Management ordinance	The ordinance establishes additional standards for development activities in the floodplain, enforced by the Building and Safety Division staff. This ordinance can be amended to implement additional flood mitigation strategies.
Policy	Building code	The building code specifies how all new construction in the City shall be built. These requirements can be amended to require new construction to be more resilient to emergency situations.
Policy	Fire code	The fire code contains specific fire safety requirements for all structures. These requirements can be modified to require increased fire safety measures.
Policy	City Budget	The South Gate City Council adopts a budget every fiscal year, which identifies sources of revenue for the City and how this money will be spent. The budget can direct funding toward hazard mitigation activities, including increased staffing, planning efforts, and capital improvements.
Policy	Development code	The code contains land use regulations, including requirements for all new construction. The code can be used to implement hazard mitigation measures related to land use and development.
Policy	Water Conservation ordinance	South Gate's Water Conservation ordinance establishes mandatory and permanent water conservation activities for all South Gate residents and businesses, as well as additional mandatory standards for various stages of water shortage events. These standards help mitigate the impact of drought-related emergency events.
Policy	Tree Preservation and Protection ordinance	South Gate's Tree Preservation and Protection ordinance regulates the planting, maintenance, and removal of public trees in the community. Public trees can help to mitigate some types of hazards, and this ordinance can be amended to support additional mitigation activities.

Supporting Resource Type	Supporting Resource Name	Ability to Support Local Hazard Mitigation Activities
Policy	Storm Drains ordinance	The Storm Drains ordinance governs the use and maintenance of the storm drain system in South Gate. This infrastructure can help mitigate damage from flood-related emergency situations.

Fiscal Capabilities

This section summarizes South Gate’s fiscal capabilities, as determined by the City’s financial resources and allocated budget. According to budget summaries for recent fiscal years, South Gate receives most of its revenue from sales and property taxes. The greatest share of the City’s General Fund (approximately half) is allocated to the Police Department, followed by the Parks & Recreation Department and various administrative functions (including the Finance Department, City Council, City Manager, Treasurer, and City Clerk), with smaller amounts going to the Public Works and Community Development Departments.

City of South Gate Department Overview

City departmental budgets are used to employ City staff members who are an integral part of the mitigation planning process. The following list describes City leadership and staff positions by department:

- The City Council comprises a Mayor, Vice Mayor, and three City Council members and is supported by the City Manager, City Treasurer, and support staff.
- The Parks and Recreation Department includes the Director, Deputy Parks Director, Parks Superintendent, and support staff.
- The Administrative Services Department includes the Director, and two Deputy Directors and support staff.
- The Community Development Department includes a Director, Senior Planner, Building Official, Code Enforcement Manager, Housing Administrator, and supporting staff.
- The Public Works Department includes a Director of Public Works/ City Engineer, Field Operations Manager, Assistant City Engineer, Sewer Superintendent, Equipment Superintendent, Electrical Superintendent, Water Division Manager, and support staff.
- The Police Department employs a Chief, command staff, police officers, an emergency manager, and public safety staff.

Capital Improvement Program (FY 2016–17)

The Capital Improvement Program budget is an important part of the City’s budget. The FY 2016/2017 budget presents over 50 capital improvement projects with expenditures totaling over \$70 million. These projects provide funding for needed repairs, replacements, and improvements to streets, water infrastructure, parks, public buildings, vehicles, and equipment.

Los Angeles County Fire Department

The City of South Gate is part of the Consolidated Fire Protection District of Los Angeles County, which is served by the Los Angeles County Fire Department. In addition, the fire department provides public education programs to schools, businesses, community associations, child care providers, and other members of the community. It also coordinates the inspection of commercial buildings, investigates fires, and enforces hazardous materials regulation. Fire services are paid through a special tax assessment on each property in the City.

CHAPTER 5: PLAN MAINTENANCE

This Plan must remain up-to-date in order to continue to help protect the community against hazards and to remain eligible for federal and state funding. To that end, this chapter contains a schedule for plan monitoring, evaluation, and revision. It describes how the City will incorporate mitigation actions in the Plan into existing policies and programs, including the South Gate General Plan and City Budget.

Public participation was an integral component of developing this Plan, and it will continue to be critical during Plan maintenance activities. This chapter also describes how public participation will be involved in Plan maintenance.

5.1 Coordinating Body

The South Gate LHMP Team will continue to be responsible for Plan maintenance. As noted in Chapter 1, the LHMP Team is made up of representatives from the following departments:

- City of South Gate Administrative Services Department
- City of South Gate Community Development Department
- City of South Gate Parks & Recreation Department
- City of South Gate Police Department
- City of South Gate Public Works Department
- Los Angeles County Fire Department
- Los Angeles County Office of Emergency Management

Representatives from these agencies will coordinate the maintenance of this Plan, including undertaking a formal review and update of the Plan as specified. The City of South Gate Community Development Department will facilitate meetings of the LHMP Team and will coordinate required tasks among the participating agencies. All members of the LHMP Team have a shared responsibility for the implementation and evaluation of this Plan.

5.2 Plan Evaluation

The LHMP Team will meet at least once annually, beginning one year after adoption, to evaluate implementation progress and integration of mitigation actions into other documents. As part of this evaluation process, members of the LHMP Team should look at the following:

- Any hazard events that occurred in South Gate within the past year, and the scope of their impacts.
- Mitigation activities in the Plan which have been implemented and are achieving success.
- The timeline for implementation of mitigation activities, and whether the timeline should be amended.

- Any mitigation activities prioritized for the past year which have not been completed, and why.
- The need for any new or revised mitigation actions.
- Any changes or potential for changes in funding options for mitigation activities.
- Any new scientific data or mapping that informs the information in the Plan.
- Any new or revised planning programs or other initiatives applicable to South Gate that involve hazard mitigation.

The LHMP Team will prepare an annual progress report, which will be distributed to City department heads for review, and will be presented to the City Council. It will be posted on the City of South Gate website, with the ability for members of the public to provide comments. This annual report will also be provided to local media as a press release. The plan evaluation process will commence one year after City Council adoption.

5.3 Method and Schedule for Plan Update

Title 44 of the Code of Federal Regulations, Section 201.6(d)(3), requires that local hazard mitigation plans be reviewed, revised if necessary, and resubmitted to FEMA for approval in order for the community to remain eligible for the benefits awarded under the DMA. The City intends to update the Plan on a five-year cycle from the date of the initial plan adoption. This update process should occur one year prior to the expiration of the existing plan, although it may be accelerated to less than five years based on the following triggers:

- A state or federal declaration disaster that impacts the City of South Gate.
- A hazard event that results in the loss of life.

The update process will allow the City to add new planning process methods, community profile data, hazard data and events, vulnerability analyses, mitigation actions, and goals to the Plan. Due to this update process, the Plan should always be current and up-to-date.

The LHMP Team will carry out the update process, which will include the following steps:

- Review and update the risk assessment based on the best and most recent available information and technologies.
- Evaluate the mapping and lists of critical structures, and update and improve as necessary and as funding becomes available.
- Review and revise the list of mitigation actions to account for any actions that are completed, postponed, changed to account for revisions in the risk assessment, or changed to account for new or revised City policies identified by other planning mechanisms.
- Send the draft update to the appropriate agencies for review and comment.
- Provide members of the public an opportunity to comment on the draft update, and revise the draft as appropriate based on public comment.

- Transmit the draft update to the California Office of Emergency Services (Cal OES) and FEMA for review and approval.

The South Gate City Council is responsible for the final adoption of the Plan, following notification from FEMA that the Plan is Approved Pending Adoption (APA). The South Gate Community Development Department will transmit the Plan to FEMA following adoption by the City Council.

5.4 Implementation through Existing Programs

The effectiveness of this Plan depends on the implementation of the mitigation actions, and incorporating these actions into other City plans, policies, and programs. These mitigation actions provide the framework for activities that the City can implement over the next five years. The City has prioritized the actions in this Plan, which will be implemented through existing plans, policies, and programs as resources become available. The LHMP Team is responsible for implementing the mitigation actions in the Plan.

The information on hazards and risks, vulnerability, and mitigation in this LHMP is based on the best and most recent available information, technology, and resources available at the time this LHMP was prepared. The City of South Gate's General Plan, particularly the Safety Element, is integral to the success of this LHMP, as the Safety Element creates the framework for the Plan to expand upon. The General Plan and this LHMP are complementary documents that work together to reduce the risk of hazards to the residents and businesses of South Gate. Many of the ongoing recommendations identified in the mitigation activities are recommended by the General Plan and other adopted plans, such as the City of South Gate budget and Capital Improvements Program.

5.5 Continued Public Involvement

The residents and businesses of South Gate will continue to be informed of and involved in the LHMP update process. When the LHMP update process begins, a new public involvement strategy will be developed based on guidance from the LHMP Team. This involvement strategy will be based on the needs and capabilities of the City at the time of the update. This strategy will at least include the use of the City's website and local media to inform the public and to gather public feedback.

5.6 Point of Contact

The preparation and future update of South Gate's LHMP will be carried out by the LHMP Team, with participation by and support from the City's Community Development Department. The primary contact for this department is:

Alvie Betancourt

Email: abetancourt@sogate.org

Phone: 323-563-9500

APPENDIX A – LHMP TEAM DOCUMENTS

1. LHMP TEAM MEETING DOCUMENTATION

Meeting Materials

South Gate Local Hazard Mitigation Plan and Safety Element Update Project Management Team

Kickoff Meeting: July 14, 2015

Included Materials:

- Meeting agenda
- Project Overview
- Hazard Mitigation Planning Team
- LHMP Technical Advisory Committee
- Project Schedule
- Sign-In Sheet
- Presentation

City of South Gate

Local Hazard Mitigation Plan and Safety Element Update

Kick-off Meeting

Tuesday July 14th, 1:00 – 3:00 p.m.

South Gate City Hall, 8650 California Ave

Agenda

1. Introductions (5 minutes)
2. Project Goals & Expectations (10 minutes)
3. Staffing & Communication Protocols (5 minutes)
4. Project Overview (25 minutes)
 - a. Local Hazard Mitigation Plan
 - b. Safety Element
5. Engagement & Outreach (30 minutes)
 - a. LHMP/Safety Element Planning Team
 - b. Public Outreach Approach
6. Data Collection & Critical Facilities (20 minutes)
7. Work Plan & Schedule Review (10 minutes)
 - a. Overview of work program, key tasks, and schedule
 - b. Wrap-up and next steps

Project Overview

The City of South Gate is initiating a planning effort to prepare a Local Hazard Mitigation Plan (LHMP) and updated General Plan Safety Element. This integrated planning effort will maximize the City's eligibility for future grant funding.

Local Hazard Mitigation Plan

DMA 2000 (Public Law 106-390) provides the legal basis for FEMA mitigation planning requirements for State, local and Indian Tribal governments as a condition of mitigation grant assistance. DMA 2000 amended the Robert T. Stafford Disaster Relief and Emergency Assistance Act by repealing the previous mitigation planning provisions and replacing them with a new set of requirements that emphasize the need for State, local, and Indian Tribal entities to closely coordinate mitigation planning and implementation efforts. The requirement for a State mitigation plan is continued as a condition of disaster assistance, adding incentives for increased coordination and integration of mitigation activities at the State level through the establishment of requirements for two different levels of state plans. DMA 2000 also established a new requirement for local mitigation plans and authorized up to 7 percent of HMGP funds available to a State for development of State, local, and Indian Tribal mitigation plans.

Completion and acceptance of the City's LHMP by FEMA opens up access to the following competitive FEMA grant programs for the next 5 years:

- Hazard Mitigation Grant Program (HMGP)
- Pre-Disaster Mitigation (PDM)

Under these programs up to 75% of the cost of an implementation project could be covered by a FEMA grant.

Safety Element

Assembly Bill 2140 amended California Government Code Sections 8685.9 and Section 65302.6 to enable local jurisdictions to receive additional post-disaster funding if the LHMP is linked to the General Plan Safety Element and consistent with the Disaster Mitigation Act of 2000. To maximize this potential benefit to the City, the project includes preparation of a Safety Element that is linked to the LHMP.

California Government Code Section 65302(g)(1) requires that a general plan include a safety element for the protection of the community from any unreasonable risks associated with the effects of seismically induced surface rupture, ground shaking, ground failure, tsunami, seiche, and dam failure; slope instability leading to mudslides and landslides; subsidence, liquefaction, and other seismic hazards identified pursuant to Chapter 7.8 (commencing with Section 2690) of Division 2 of the Public Resources Code, and other geologic hazards known to the legislative body; flooding; and wildland and urban fires. Consistent with Assembly Bill (AB) 739 (California Government Code Sections 8685.9 and 65302.6), and in order to maximize the benefits of public safety planning, the Safety Element will integrate the background research and policy recommendations contained in the LHMP update.

Preliminary Goals of the Project

At the kick-off meeting, the project team will have the opportunity to discuss and confirm project goals. Based on the initial project kickoff, discussion with City staff, and guidance from the General Plan, preliminary goals to consider include the following:

1. Achieve certification of the LHMP by FEMA for Pre-Disaster Mitigation grant funding eligibility.
2. Encourage appropriate flood control and prevent negative impacts of new development on flood-control efforts (South Gate General Plan, Green City Element, Objective GC 4.1).
3. Promote coordination between land-use planning and urban design, and law enforcement (South Gate General Plan, Public Facilities Element, Objective PF 1.2).
4. Ensure that all new development includes adequate provision for fire safety (South Gate General Plan, Public Facilities Element, Objective PF 2.2).

Project Objectives as discussed with City Staff

The PMC project manager and key City staff participated in an initial kickoff on June 8, 2015. The management team identified the following objectives during the June 8 kickoff:

- A. Continued coordination with key stakeholders and other agencies.
 - a. Who are key stakeholders to contact?
- B. A flexible and engaging public outreach campaign.
 - a. What are the lessons learned from previous outreach events?
- C. Foster better communication and coordination within the City and surrounding areas.
 - a. What Cities/Agencies should be contacted regarding this project?
- D. Address aging infrastructure issues to reduce/minimize future hazards and disasters.
 - a. What infrastructure is at risk in your opinion?

South Gate Hazard Mitigation Planning Team

This core team of City staff members will participate in actively reviewing and commenting on the City's Local Hazard Mitigation Plan and Safety Element. The following is a listing of City departments that should be involved. At least one staff member from each department should be in attendance for any meetings scheduled for the project.

- Administrative Services - Finance
- City Clerk
- City Manager
- Community Development
- Fire (Los Angeles County Fire Department)
- Parks & Recreation
- Police
- Public Works

LHMP Technical Advisory Committee

In addition to the HMP Team, the City will convene a larger Technical Advisory Committee to review and comment on the plan/process. This Team will include all Planning Team members from above, as well as stakeholders selected by the City.

- California Highway Patrol
- City of Cudahy
- City of Downey
- City of Huntington Park
- City of Lynwood
- City of Paramount
- County of Los Angeles Public Library – South Gate Branch, Leland R. Weaver Library
- Koos Manufacturing (employer)
- Los Angeles County Regional Planning Office
- Los Angeles County Fire Department
- Los Angeles County Flood Control District
- Los Angeles Department of Water and Power
- Los Angeles Unified School District
- Water Boards
- Southern California Association of Governments
- Schultz Steel (employer)
- Southern California Edison
- South Gate Chamber of Commerce

Schedule

Draft Schedule, updated June 2015

Key	Activity	Start	End
HMP	Gather Existing Data and Documentation	7/1/2015	7/19/2015
HMP	Preparation of Critical Facilities List	7/1/2015	7/19/2015
HMP	Preparation of GIS Base Mapping	7/1/2015	7/19/2015
HMP	Kickoff Meeting/Field Reconnaissance -	7/14/2015	7/14/2015
HMP	Initiate Agency Outreach/Consultation	7/15/2015	7/31/2015

Kickoff Presentation

Michael Baker
INTERNATIONAL

We Make a Difference

City of South Gate Local Hazard Mitigation Plan & Safety Element Project Kickoff

Meeting Objectives

- Project Objective/Project Goals
- Hazard mitigation plan development overview
- Review engagement and outreach process
- Finalize critical facilities list
- Discuss past hazard events
- Review Work Plan and schedule

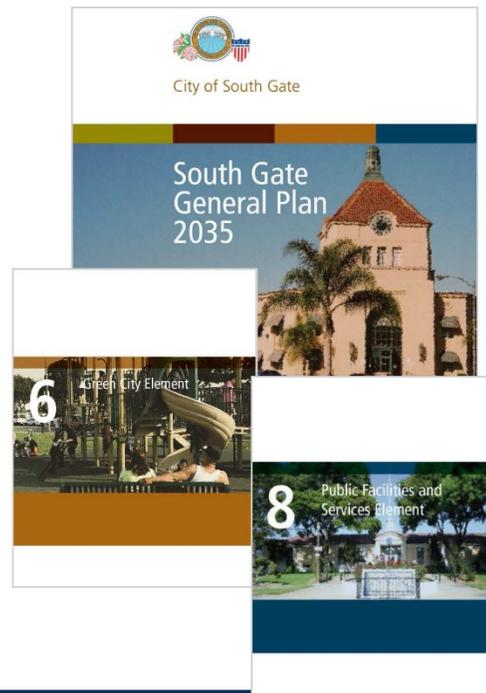

Project Goal and Objectives

Enhance public safety through hazard mitigation and comprehensive planning

Safety Element Requirements and Opportunity

- The California Government Code requires a Safety Element (SE)
 - Must be part of the General Plan
 - Must address certain issues, including fire and flood hazards
- Integration of the LHMP with the SE qualifies jurisdictions for additional post-disaster funding

Goals for Hazard Mitigation Planning

We Make a Difference

LHMP Goals

- Encourage appropriate flood control and prevent negative impacts of new development on flood-control efforts (South Gate General Plan, Green City Element, Objective GC 4.1).
- Promote coordination between land-use planning and urban design, and law enforcement (South Gate General Plan, Public Facilities Element, Objective PF 1.2).
- Ensure that all new development includes adequate provision for fire safety (South Gate General Plan, Public Facilities Element, Objective PF 2.2).

LHMP Project Objectives

- Continued coordination with key stakeholders and other agencies.
 - Who are key stakeholders to contact?
- A flexible and engaging public outreach campaign.
 - What are the lessons learned from previous outreach events?
- Foster better communication and coordination within the City and surrounding areas.
 - What Cities/Agencies should be contacted regarding this project?
- Address aging infrastructure issues to reduce/minimize future hazards and disasters.
 - What infrastructure is at risk in your opinion?

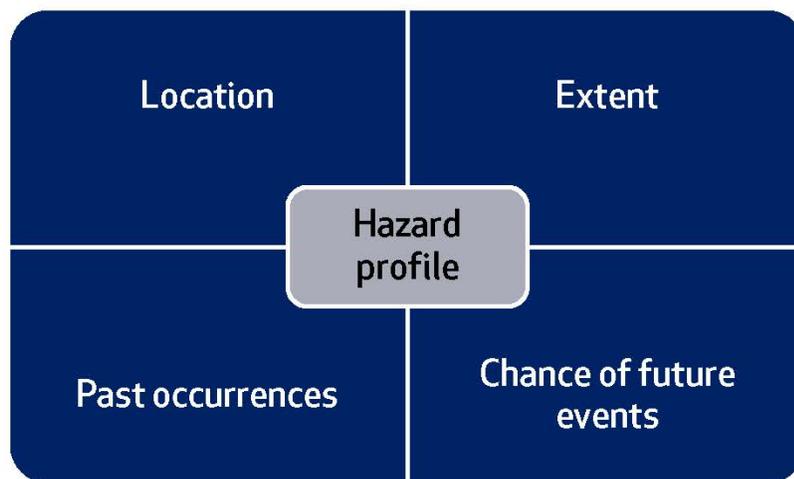

Local Hazard Mitigation Plan (LHMP) Development

We Make a Difference

Plan Requirements – Hazard Identification and Risk Assessment

- Describe all hazards that affect the community.
- Provide rationale for excluding recognized hazards.

Plan Requirements – Hazard Identification and Risk Assessment

Vulnerability Assessment

- City's vulnerability to each hazard
- Potential impacts of each hazard (number and importance of affected structures and areas)
- Identifies repetitive loss properties
- Includes potential dollar losses

Plan Requirements – Mitigation Strategy

- **Goals**
- **Identification and analysis of mitigation actions**
 - Comprehensive
 - Focus on built environment
- **Action Plan**
 - Prioritizes actions
 - Describes implementation and administration
 - Includes cost-benefit review

Plan Requirements – Mitigation Strategy

- Strategy identifies existing authorities, policies, programs, and resources to mitigate hazards
- Includes description of participation in National Flood Insurance Program

Plan Requirements – Planning Process

- **Describe:**
 - How the plan was prepared
 - Who was involved
 - Opportunities for public and stakeholder involvement
 - Review and inclusion of existing plans, reports, studies, etc.
 - Continual public participation
 - Monitoring and updating of the plan
- **Stakeholders must include:**
 - Local and regional agencies involved in hazard mitigation
 - Agencies that regulate development
 - Neighborhood communities

LHMP Planning Team

- Agency representatives to advise and contribute to plan preparation
- Three LHMP Planning Team meetings:
 - Meeting 1 – Review and discuss hazard mitigation process, and identification and ranking of hazards
 - Meeting 2 – Review and discussion of the hazard profiles and risk assessment
 - Meeting 3 – Review and discussion of the draft mitigation actions

Plan Requirements – Planning Process LHMP Planning Team

- Administrative Services - Finance
- City Clerk
- City Manager
- Community Development
- Fire (Los Angeles County Fire Department)
- Parks & Recreation
- Police
- Public Works

Technical Advisory Committee (LHMP Planning Team)

- California Highway Patrol
- City of Cudahy
- City of Downey
- City of Huntington Park
- City of Lynwood
- City of Paramount
- County of Los Angeles Public Library – South Gate Branch, Leland R. Weaver Library
- Kuz Manufacturing (employer)
- Los Angeles County Regional Planning Office
- Los Angeles County Fire Department
- Los Angeles County Flood Control District
- Los Angeles Department of Water and Power
- Los Angeles Unified School District
- Water Boards
- Southern California Association of Governments
- Schultz Steel (employer)
- Southern California Edison
- South Gate Chamber of Commerce

Responsibilities

Our job

- Facilitate the process
- Provide technical expertise
- Do the heavy work

Your job

- Participate
- Make final decisions
- Ensure plan is feasible and meets needs
- Groundtruthing the plan

Data Needs

- Every person can provide vital data
 - GIS data
 - Information and experience about past events
 - Institutional knowledge
- If you have useful data, please contact *Alvie Betancourt*
(323) 563-9526
abetancourt@sogate.org

Engagement and Outreach

We Make a Difference

Public Outreach Strategy

Outreach Options

Original Proposal	Option 1	Option 2
Online Survey	2 PMC staff @ 1 community event	PMC Project Manager @ 1 traditional workshop
Two public workshops	Outreach training for City staff	1 PMC staff member @ 1 community event
	1,000 ½ page, color project flyers and booth materials	Reduced quantity of ½ page, color project flyers and booth materials
	Press release	
	1 project PPT and talking points for additional City staff outreach	

Critical Facilities

We Make a Difference

Critical Facilities, Part I

- **City Facilities**
 - City of South Gate City Hall
 - Parks & Recreation - Administration
 - Parks & Recreation - South Gate Girls Clubhouse
 - Parks & Recreation - South Gate Golf Course
 - Parks & Recreation - South Gate Senior Center
- Parks & Recreation - South Gate Sports Center
- Parks & Recreation - South Gate Swim Stadium
- Parks & Recreation - Hollydale Community Resource Center
- Parks & Recreation - Westside Community Resource Center
- Police Information Center

Critical Facilities, Part II

- **County Facilities**
 - L.A. County Fire Station #57
 - South Gate Senior High School
 - Odyssey Continuation School
 - Faith Christian Academy
 - Academia Betel
 - South Gate Middle School
 - State Street Elementary School
 - Victoria Avenue Elementary School
 - Stanford Avenue Elementary School
 - San Miguel Elementary School
 - Liberty Boulevard Elementary School
 - Hollydale Elementary School
 - Bryson Avenue Elementary School
 - San Gabriel Avenue Elementary School
 - Independent Elementary School
 - St. Helen Elementary School
 - Redeemer Lutheran School
 - Lollypop Lane Pre-School and Kindergarten

Hazard Identification and Prioritization

We Make a Difference

FEMA-Suggested Hazards

Avalanche	Flood	Seismic hazards
Climate change	Geological hazards	Severe winter storm
Coastal erosion	Hailstorm	Tornado
Coastal storm	Hazardous materials	Tsunami
Dam failure	Human-caused hazards	Volcano
Disease/pest management	Hurricane	Wildfire
Drought	Land subsidence	Wind
Earthquake fault rupture	Landslide and mudflow	Windstorm
Expansive soils	Liquefaction	
Extreme heat	Sea level rise	

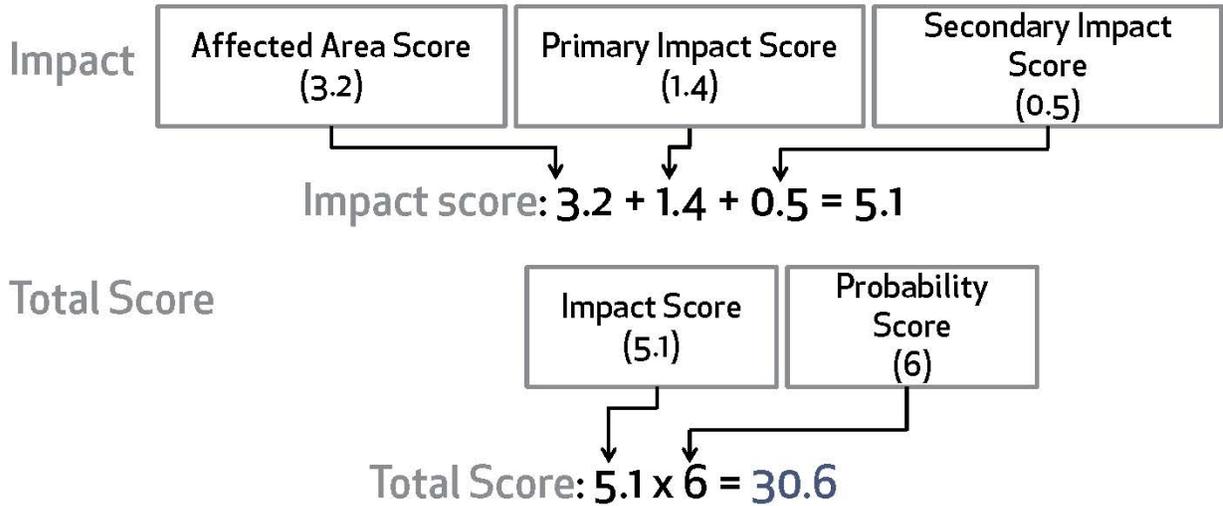

Relevant Hazards

Avalanche	Flood	Seismic hazards
Climate change	Geological hazards	Severe winter storm
Coastal erosion	Hailstorm	Tornado
Coastal storm	Hazardous materials	Tsunami
Dam failure	Human-caused hazards	Volcano
Disease/pest management	Hurricane	Wildfire
Drought	Land subsidence	Wind
Earthquake fault rupture	Landslide and mudflow	Windstorm
Expansive soils	Liquefaction	
Extreme heat	Sea level rise	

Hazard Prioritization

- **Four criteria [Weightings]**
 - Probability (likelihood of occurrence) [2.0]
 - Location (size of potentially affected area) [0.8]
 - Maximum Probable Extent (intensity of damage) [0.7]

Meeting Materials

South Gate Local Hazard Mitigation Plan and Safety Element Update Project Management Team

Meeting 1: August 12, 2015

Included Materials:

- Meeting agenda
- Preliminary Goals of the Project
- LHMP Stakeholders
- Critical Facilities
- Public Outreach Strategy
- Sign-In Sheet
- Presentation

City of South Gate

Local Hazard Mitigation Plan and Safety Element Update

LHMP Meeting #1

Wednesday August 12th, 1:00 – 3:00 p.m.

South Gate City Hall, 8650 California Ave

Agenda

1. Introductions (5 minutes)
2. Preliminary Project Goals (10 minutes)
3. Review LHMP Stakeholders (5 minutes)
4. Review Critical Facilities (10 minutes)
5. Review Public Outreach Strategy (10 minutes)
6. Review Hazard Profiles Information (30 minutes)
7. Hazard Prioritization Exercise (30 minutes)
8. Next Steps

Preliminary Goals of the Project

1. Encourage appropriate flood control and prevent negative impacts of new development on flood-control efforts (South Gate General Plan, Green City Element, Objective GC 4.1).
2. Promote coordination between land-use planning and urban design, and law enforcement (South Gate General Plan, Public Facilities Element, Objective PF 1.2).
3. Ensure that all new development includes adequate provision for fire safety (South Gate General Plan, Public Facilities Element, Objective PF 2.2).

LHMP Stakeholders

1. City of Bell Gardens
2. City of Cudahy
3. City of Downey
4. City of Huntington Park
5. City of Los Angeles - Council District Representative
6. City of Lynwood
7. City of Paramount
8. County of Los Angeles Public Library (Administrative Office)
9. East LA Community College (Satellite Campus)
10. Golden State Water Company
11. Hollydale Library
12. Los Angeles County Fire Department
13. Los Angeles County Flood Control District
14. Los Angeles County Operational Area E
15. Los Angeles County Regional Planning (Westmont/West Athens)
16. Los Angeles County Supervisor Office (District 1)
17. Los Angeles Department of Water and Power
18. Los Angeles Unified School District
19. MTA
20. MWD
21. South Gate Chamber of Commerce
22. Southeast Area Animal Control Authority (SEAACA)
23. Southern California Association of Governments
24. Southern California Edison
25. Southern California Gas Company
26. Tweedy Mile Association (TMA)
27. Walnut Mutual Water
28. Waste Management

Critical Facilities

	Facility	Address
City Facilities	City of South Gate City Hall	8650 California Avenue
	Public Works Corporate Yard	4244 Santa Ana Street
	Parks & Recreation - Administration	4900 Southern Avenue
	Parks & Recreation - South Gate Girls Clubhouse	4940 Southern Avenue
	Parks & Recreation - South Gate Golf Course	9615 Pinehurst Avenue
	Parks & Recreation - South Gate Senior Center	4855 Tweedy Boulevard
	Parks & Recreation - South Gate Sports Center	9520 Hildreth Avenue
	Parks & Recreation - Hollydale Community Resource Center	12221 Industrial Avenue
	Parks & Recreation - Westside Community Resource Center	9200 State Street
	County Facilities	LA County Fire Station #54
L.A. County Fire Station #57		5720 Gardendale Avenue
Other Facilities	High Tension Power Lines	
	Water Infrastructure (Well Sites and Reservoirs)	Confidential
Schools	Bryson Avenue Elementary School	4470 Missouri Avenue, South Gate, CA 90280
	Hollydale School	5511 Century Boulevard, South Gate, CA 90280
	Independence Elementary School	8435 Victoria Avenue, South Gate, CA 90280
	Liberty Boulevard Elementary School	2728 Liberty Boulevard, South Gate, CA 90280
	Madison Elementary School	9820 Madison Avenue, South Gate, CA 90280
	Montara Avenue Elementary School	10018 Montara Avenue, South Gate, CA 90280
	San Gabriel Avenue Elementary School	8628 San Gabriel Avenue, South Gate, CA 90280
	San Miguel Elementary School	9801 San Miguel Avenue, South Gate, CA 90280
	South Gate Community Adult School	2525 Firestone Boulevard, South Gate, CA 90280
	Stanford Avenue Elementary School	2833 Illinois Avenue, South Gate, CA 90280
	Stanford Primary Center School	3020 Kansas Avenue, South Gate, CA 90280

State Street Elementary School	3211 Santa Ana Street, South Gate, CA 90280
Tweedy Elementary School	9724 Pinehurst Avenue, South Gate, CA 90280
Victoria Avenue Elementary School	3320 Missouri Avenue, South Gate, CA 90280
South Gate Middle School	4100 Firestone Boulevard, South Gate, CA 90280
Southeast Middle School	2560 Tweedy Boulevard, South Gate, CA 90280
Odyssey Continuation School	8693 Dearborn Avenue, South Gate, CA 90280
South East High School	2720 Tweedy Boulevard, South Gate, CA 90280
South Gate Senior High School	3351 Firestone Boulevard, South Gate, CA 90280
International Studies Learning Center School	2701 Sequoia Drive, South Gate, CA 90280
Saint Helen School	9329 Madison Ave, South Gate, CA
Redeemer Lutheran Church & School	2626 Liberty Blvd, South Gate, CA
South Gate Montessori Preschool	10108 California Ave, South Gate, CA
Aspire Firestone Academy	8929 Kauffman Ave, South Gate, CA 90280
Willow Elementary	2777 Willow Place, South Gate, CA 90280
Valiente Elementary College Prep	8691 California Ave, South Gate, CA 90280
Soledad Charter School	3616 Missouri Ave, South Gate, CA 90280
Kid's Forum	4513 Tweedy Boulevard, South Gate, CA 90280
Great Commission Baptist School	8420 South Gate Avenue, South Gate, CA 90280
Kiddie Crest Academy	13067 Paramount Blvd, South Gate, CA 90280
Pilgrim Baptist Academy	2702 Glenwood Pl, South Gate, CA 90280
Legacy High School	5225 Tweedy Blvd, South Gate, CA 90280

Public Outreach Strategy

- Disseminate information via a website page, through the City's quarterly newsletter, flyers in City water bill, and email distribution.
- Develop an email distribution list from existing sources and allow members to opt in to this process.
- Allow opportunities for new stakeholders to opt in via the website.
- Distribute an online survey to gather feedback from potential stakeholders.
- Conduct one community workshop to review hazards information and the hazard mitigation planning process with community members.

Meeting 1 Presentation

Michael Baker
INTERNATIONAL

We Make a Difference

City of South Gate Local Hazard Mitigation Plan Meeting 1

Meeting Objectives

- Present draft hazard profiles
- Prioritize hazards
- Confirm additional data needs

City of South Gate Hazard Profiles

We Make a Difference

Hazard Profile Components

- Identification of the Hazard
- Profile of the Hazard
 - Location
 - Extent
- Past Occurrences
- Probability of Future Occurrences
- Climate Change Considerations
- Vulnerabilities/ Risk Assessment
- Utilities Considerations

FEMA-Suggested Hazards

Avalanche	Flood	Seismic hazards
Climate change	Geological hazards	Severe winter storm
Coastal erosion	Hailstorm	Tornado
Coastal storm	Hazardous materials	Tsunami
Dam failure	Human-caused hazards	Volcano
Disease/pest management	Hurricane	Wildfire
Drought	Land subsidence	Wind
Earthquake fault rupture	Landslide and mudflow	Windstorm
Expansive soils	Liquefaction	
Extreme heat	Sea level rise	

South Gate – Identified Hazards

Dam failure	Extreme heat	Seismic hazards
Disease/pest management	Flood	Severe weather
Drought	Hazardous materials	

Dam Failure

- **Location and Extent**
 - The entire city (see dam inundation zones)
- **Past Occurrences**
 - Two dam failures occurred since 1900 (Southern California)
- **Probability of Future Occurrences**
 - Low, modern dams are highly unlikely to fail. However, extreme seismic shaking could cause dam failure.
- **Climate Change Considerations**
 - More frequent periods of intense precipitation, leading to a potential rise in flood events and increased vulnerability to steams/dams.

Disease/Pest Management

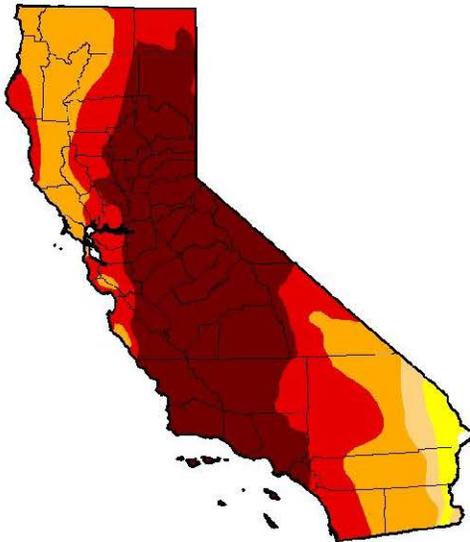

- Location and Extent
 - The entire City
- Past Occurrences
 - Data on West Nile currently unavailable; **data on diseased trees needed; other concerns?**
- Probability of Future Occurrences
 - Likely, especially as climate conditions change (see below)
- Climate Change Considerations
 - Climate change is expected to increase instances of West Nile Virus and diseased trees

Drought

- **Location and Extent**
 - The entire city
- **Past Occurrences**
 - 10 events since 1917, average three to five years in duration.
- **Probability of Future Occurrences**
 - High probability given the prevalence of drought throughout the state over the last 100 years.
- **Climate Change Considerations**
 - Anticipated changes in precipitation regimes may reduce groundwater levels within the City, further increasing risks to drought.

Drought

U.S. Drought Monitor California

July 28, 2015

(Released Thursday, Jul. 30, 2015)
Valid 8 a.m. EDT

Drought Conditions (Percent Area)

	Ncne	D0 D4	D1 D4	D2 D4	D3 D4	D4
Current	0.14	99.86	97.35	94.5E	71.03	46.00
Last Week 7/21/2015	0.14	99.86	97.35	94.5E	71.03	46.00
3 Months Ago 4/28/2015	0.14	96.83	98.11	93.44	66.63	46.77
Start of Calendar Year 1/28/2014	0.30	100.00	98.12	94.34	77.94	32.21
Start of Water Year 9/28/2014	0.30	100.00	100.00	95.04	81.92	58.41
One Year Ago 7/28/2014	0.30	100.00	100.00	100.00	81.83	58.41

Intensity:

- D0 Abnormally Dry
- D1 Moderate Drought
- D2 Severe Drought
- D3 Extreme Drought
- D4 Exceptional Drought

The Drought Monitor focuses on broad-scale conditions. Local conditions may vary. See accompanying text summary for forecast statements.

Drought

Vegetation Drought Response Index
Complete: California, Quad 4

July 27, 2015

Vegetation Condition

-  Extreme Drought
-  Severe Drought
-  Moderate Drought
-  Pre-Drought
-  Near Normal
-  Unusually Moist
-  Very Moist
-  Extremely Moist
-  Out of Season
-  Water

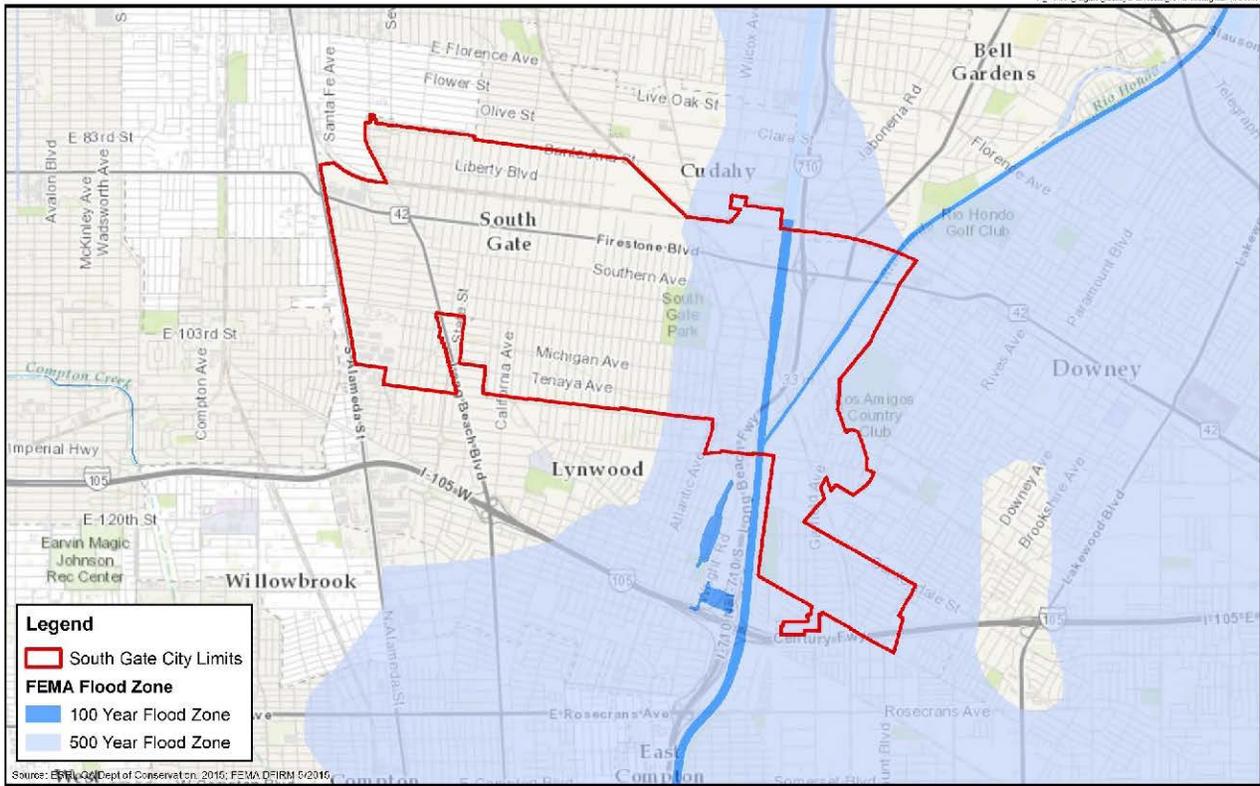

We Make a Difference

Extreme Heat

- **Location and Extent**
 - The entire city
- **Past Occurrences**
 - On average 4 extreme heat days per year
 - On average 0-1 heat wave per year
- **Probability of Future Occurrences**
 - High certainty that extreme heat conditions will occur in the future.
- **Climate Change Considerations**
 - Future climate conditions could increase the number of extreme heat events.
 - 15-35 extreme heat days expected by 2050.

Flood

- **Location and Extent**
 - Nearly all of the city east of South Gate park located in 500-year floodplain. LA River and Rio Hondo identified as 100-year floodplain.
- **Past Occurrences**
 - From 1950 to 2012, Los Angeles County had 32 state and federally-declared flood disasters, the second highest of any county in the state (**local data needed**).
- **Probability of Future Occurrences**
 - It is anticipated that urban flooding will continue to occur during wet winter storms.
- **Climate Change Considerations**
 - Increase storm intensity could increase urban flooding issues within the City.

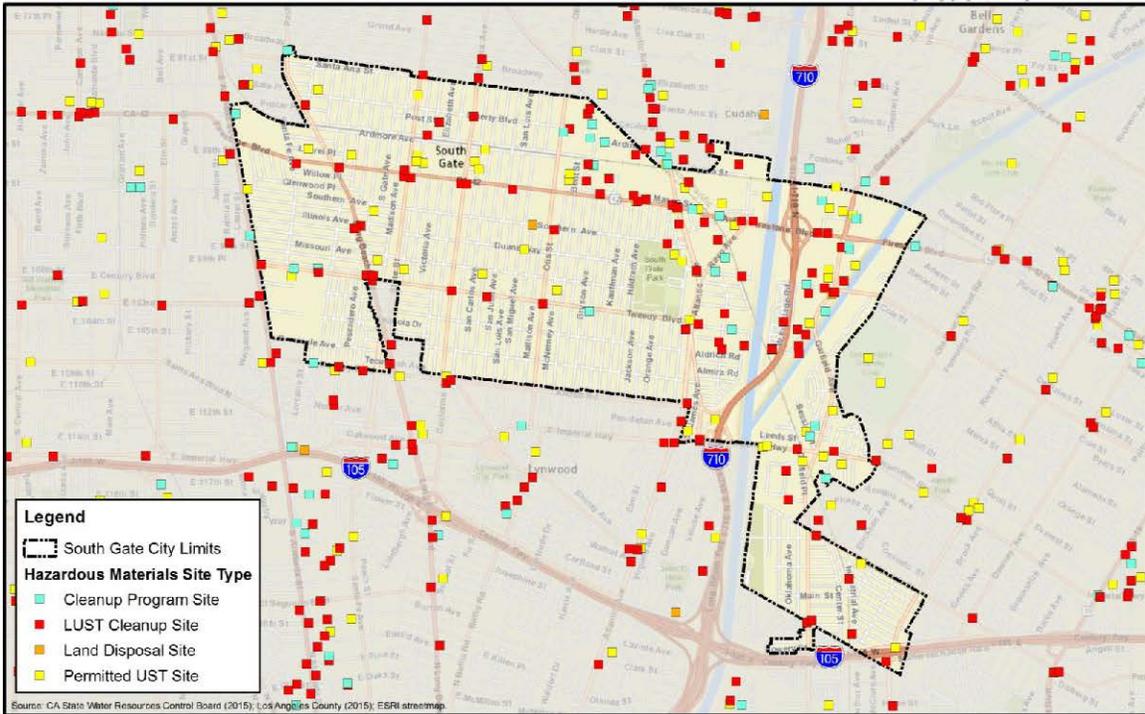

City of South Gate
Flood Hazards

We Make a Difference

Hazardous Materials

- **Location and Extent**
 - Many places in the City currently store or have previously stored hazardous materials. Rail corridors likely carry hazardous materials through the City.
- **Past Occurrences**
 - No history of significant hazardous material-related emergency events in South Gate, although there have been a few substantial events in the vicinity. (confirm)
- **Probability of Future Occurrences**
 - Unknown
- **Climate Change Considerations**
 - Unknown

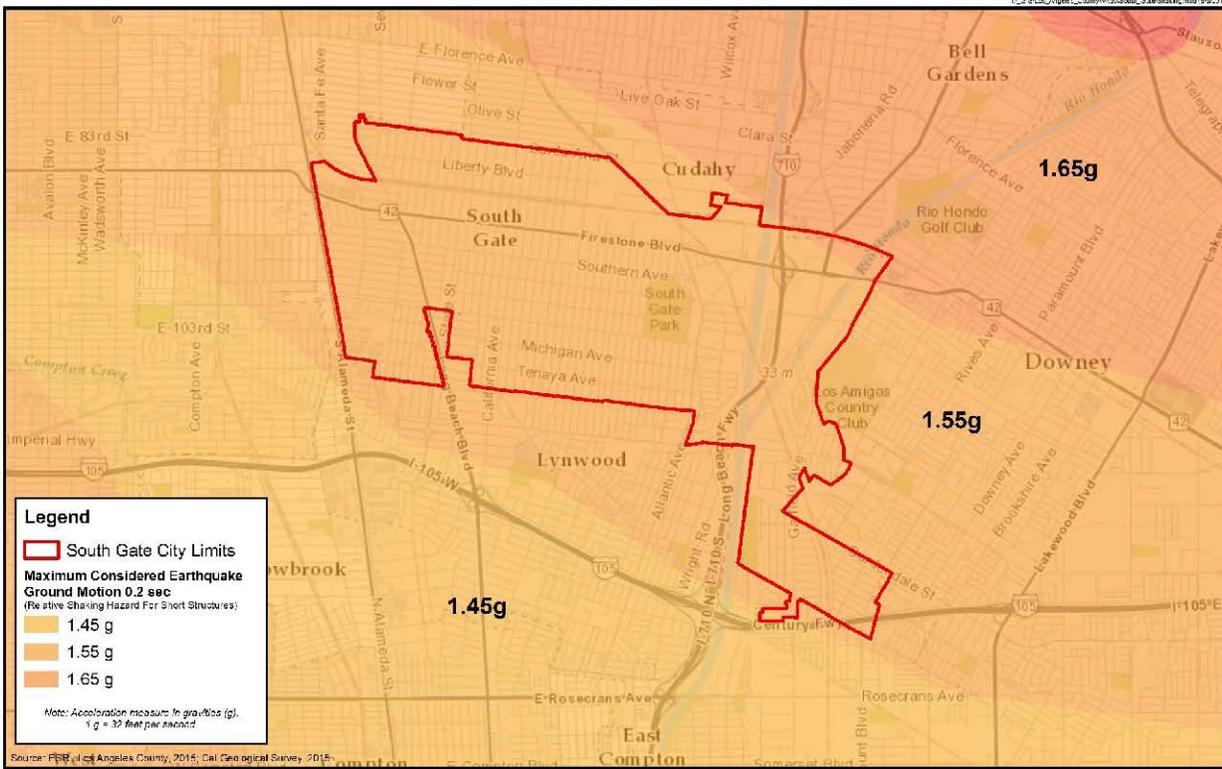

City of South Gate
Hazardous Materials Sites

We Make a Difference

Seismic Hazards

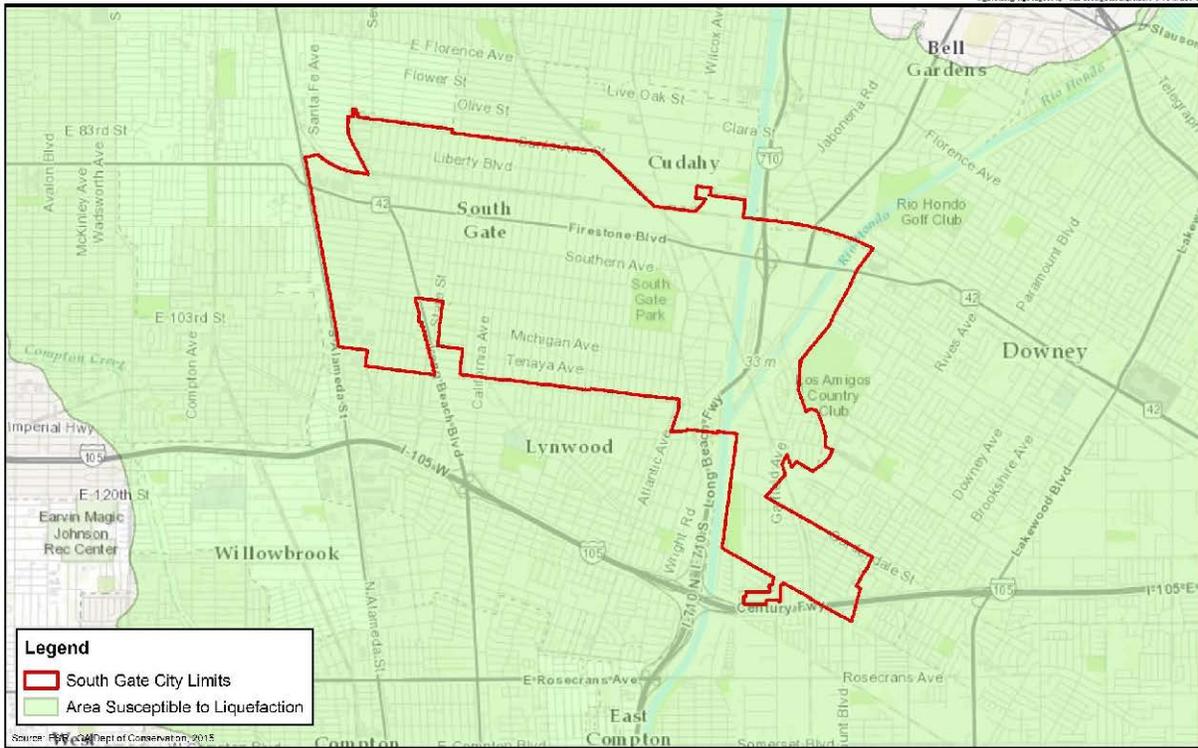

- Location and Extent
 - The entire city (for ground shaking and liquefaction)
- Past Occurrences
 - Multiple, including 1933, 1971, 1987, and 1994 earthquakes (**Local Damage?**)
- Probability of Future Occurrences
 - 100% chance of 6.0 or greater quake in Southern California by 2044 (75% of 7.0 or above)
- Climate Change Considerations
 - No effect on primary hazards
 - Potential but unknown effect on secondary hazards

City of South Gate
Seismic Shaking

We Make a Difference

City of South Gate
Liquefaction

We Make a Difference

Severe Weather

- **Location and Extent**
 - The entire city
- **Past Occurrences**
 - High wind events (e.g. Santa Anas) occur frequently
 - Hail and tornadoes are rare, but not unknown
- **Probability of Future Occurrences**
 - Likely, greater chance for severe wind events
- **Climate Change Considerations**
 - Unknown impact on severe wind events
 - Possible increase in severe storms (hail and/or tornadoes)

Hazard Prioritization

We Make a Difference

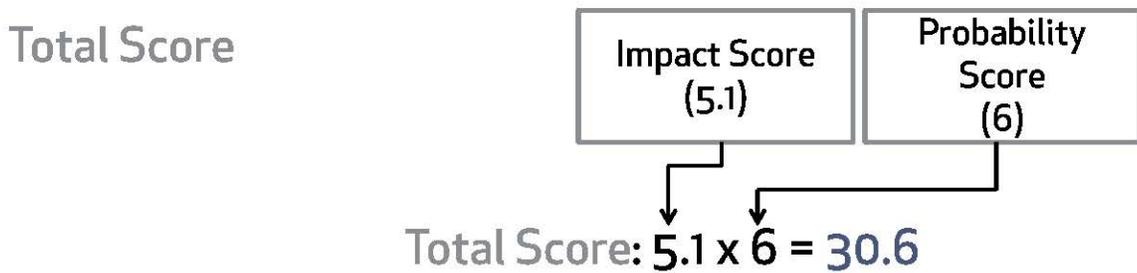

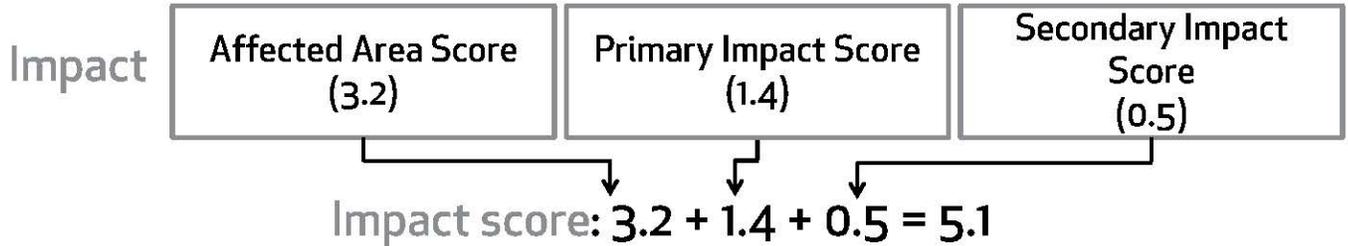

Hazard Prioritization

- **Four criteria [Weightings]**
 - Probability (likelihood of occurrence) [2.0]
 - Location (size of potentially affected area) [0.8]
 - Maximum Probable Extent (intensity of damage) [0.7]
 - Secondary Impacts (severity of impacts to community) [0.5]
- **A value of 1-4 is assigned for each criteria**
- **Every criteria has an Importance Score**
 - Can be used to weigh the influence of an individual criterion
 - Criteria and Importance values are combined to calculate a Total Score

Hazard Prioritization Example

- Four criteria [Weightings]
 - 3 Probability (likelihood of occurrence) [2.0]
 - 4 Location (size of potentially affected area) [0.8]
 - 2 Maximum Probable Extent (intensity of damage) [0.7]
 - 1 Secondary Impacts (severity of impacts to community) [0.5]

Score Example: Windstorm

LHMP Meeting 2

Michael Baker

INTERNATIONAL

We Make a Difference

City of South Gate Local Hazard Mitigation Plan Meeting 3

Meeting Objectives

- Confirm hazard prioritization
- Review draft risk assessment
- Discuss LHMP goals
- Develop initial mitigation actions

Hazard Prioritization Review

We Make a Difference

Hazard Prioritization

- **Four criteria [Weightings]**
 - Probability (likelihood of occurrence) [2.0]
 - Location (size of potentially affected area) [0.8]
 - Maximum Probable Extent (intensity of damage) [0.7]
 - Secondary Impacts (severity of impacts to community) [0.5]
- **A value of 1-4 is assigned for each criteria**
- **Every criteria has an Importance Score**
 - Used to weight the influence of an individual criterion
 - Criteria and Importance values are combined to calculate a Total Score

Hazard Prioritization

Hazard Type	Probability	Impact			Total Score	Hazard Planning Consideration
		Location	Primary Impact	Secondary Impacts		
Drought	4	4	4	4	64.00	High
Seismic Hazards	4	4	4	4	64.00	High
Extreme Heat	4	4	3	2	50.40	High
Hazardous Materials	3	4	3	4	43.80	High
Severe Weather	3	4	3	4	43.80	High
Flood	3	2	3	4	34.20	Medium
Disease/Pest Management	4	2	1	2	26.40	Medium
Dam Failure	1	4	3	4	14.60	Medium

We Make a Difference

Risk Assessment

We Make a Difference

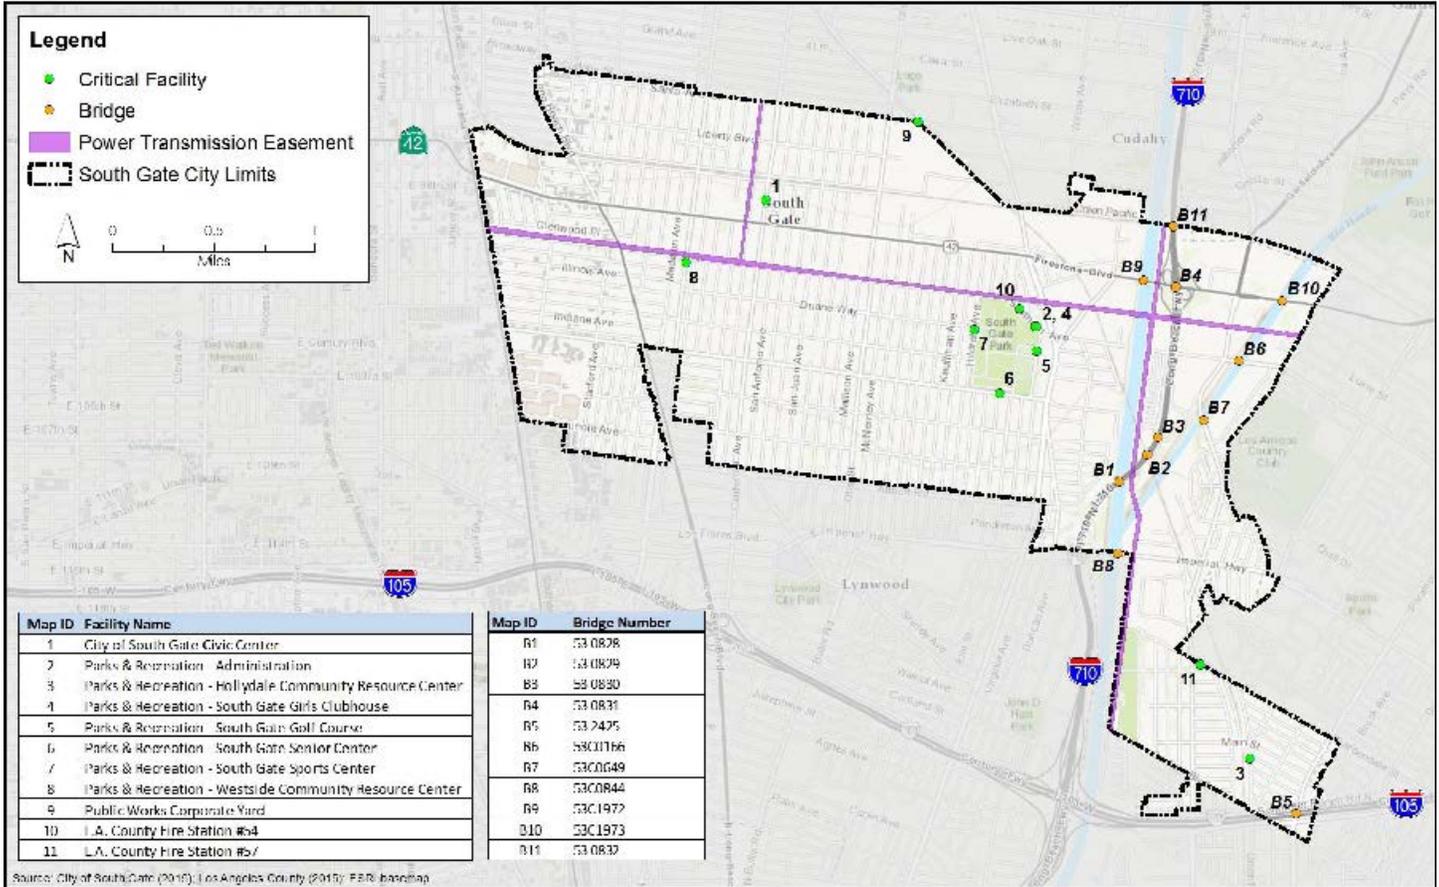

Risk Assessment Method

- Quantitative assessment of how each hazard affects the city.
- Identifies the following for each hazard area:
 - Population (based on an average population factor)
 - Land area (portion of city affected by hazard)
 - Critical facilities
 - Potential damage / loss estimations (based on building and content replacement values)

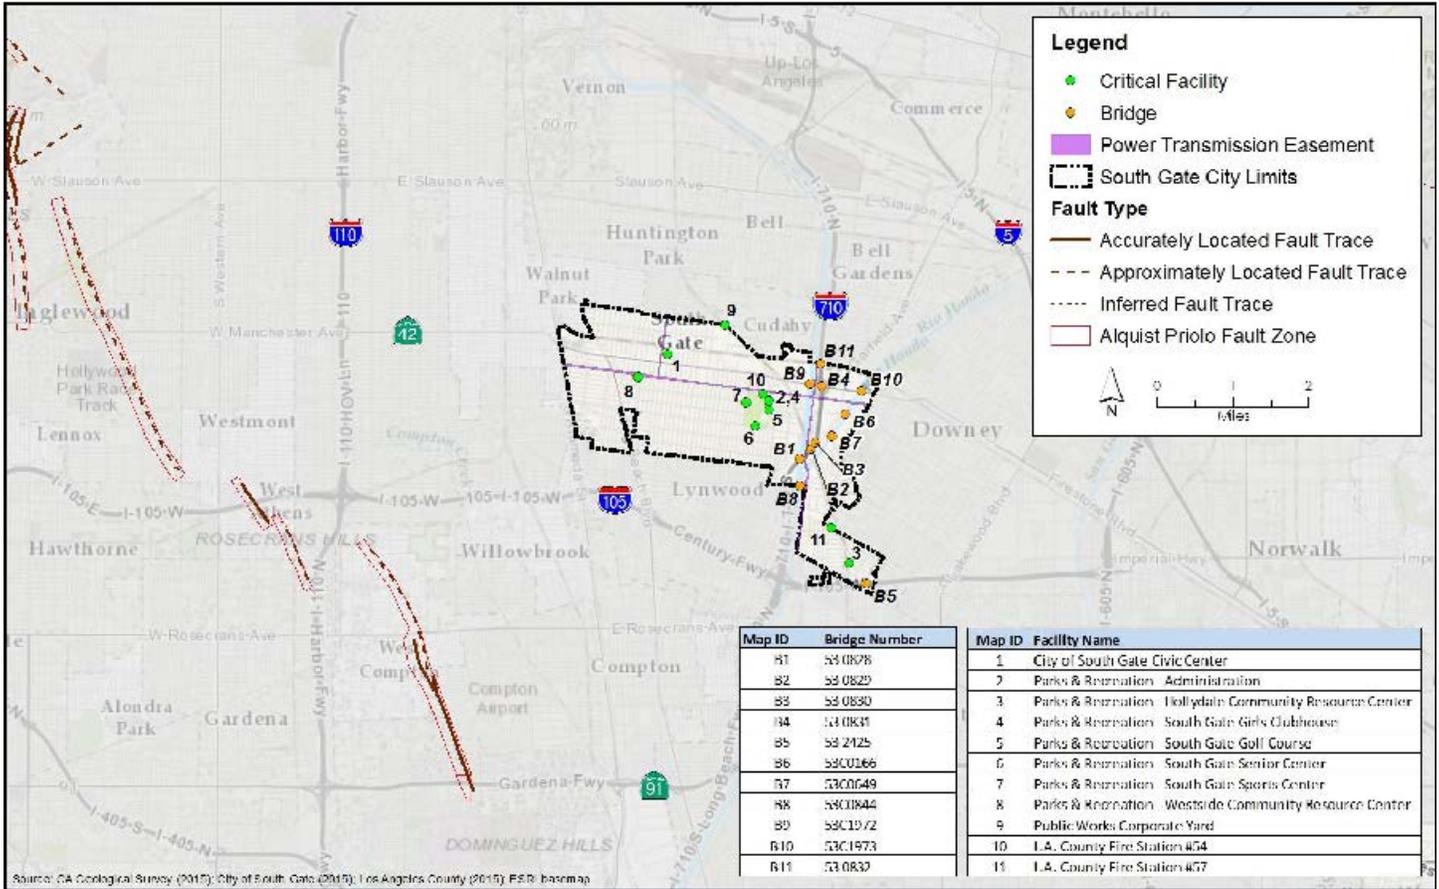

Note: An appendix will be added to the document that contains the Facilities of Concern (school sites). As part of the appendix, these facilities will qualitatively be assessed for risk.

Note: Confidential facility risk assessment information is provided under separate cover for City review.

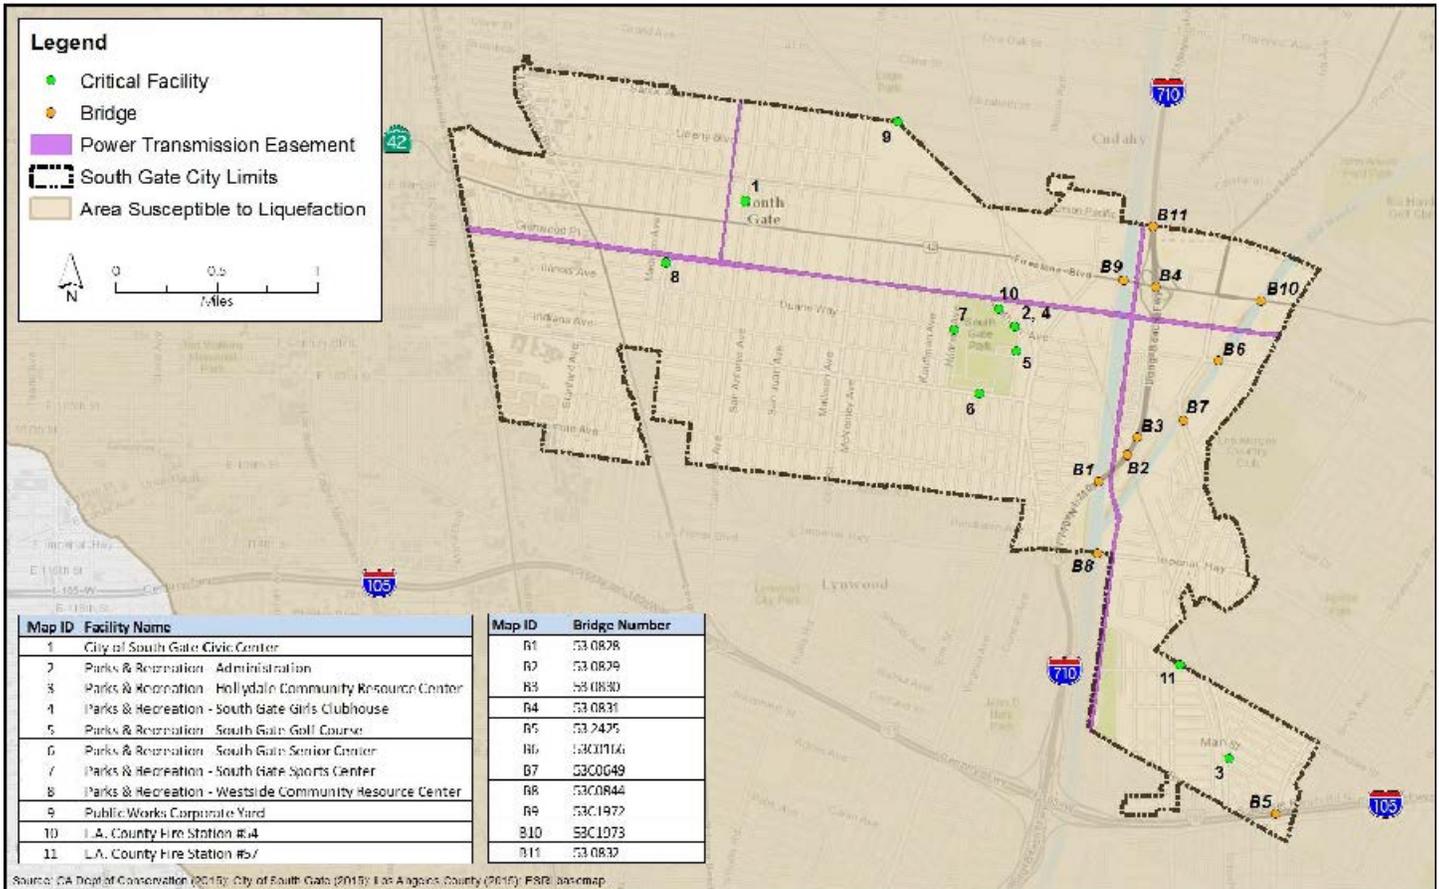

Critical Facilities

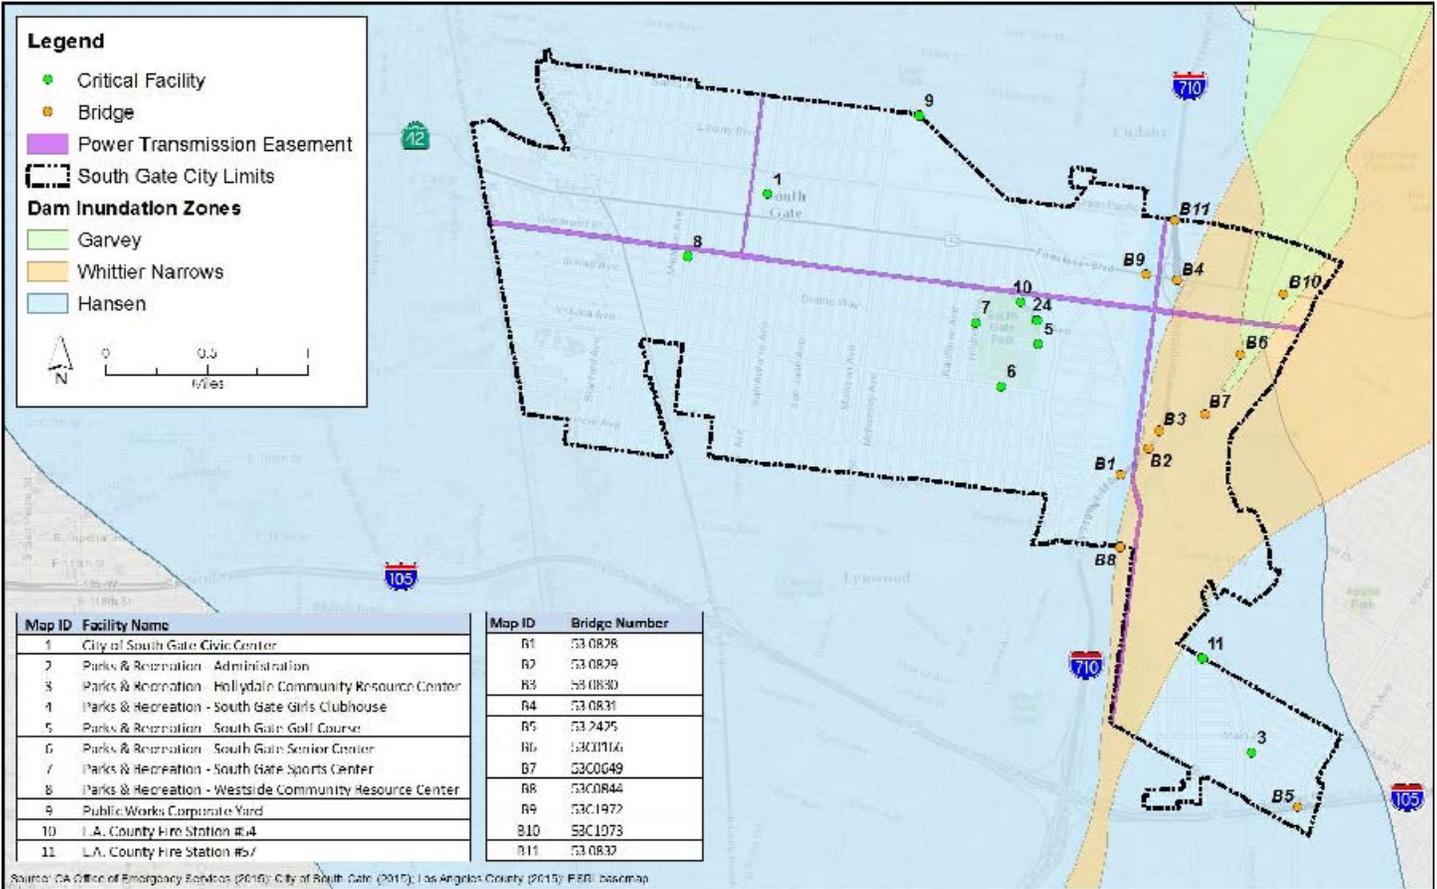

Seismic Hazards

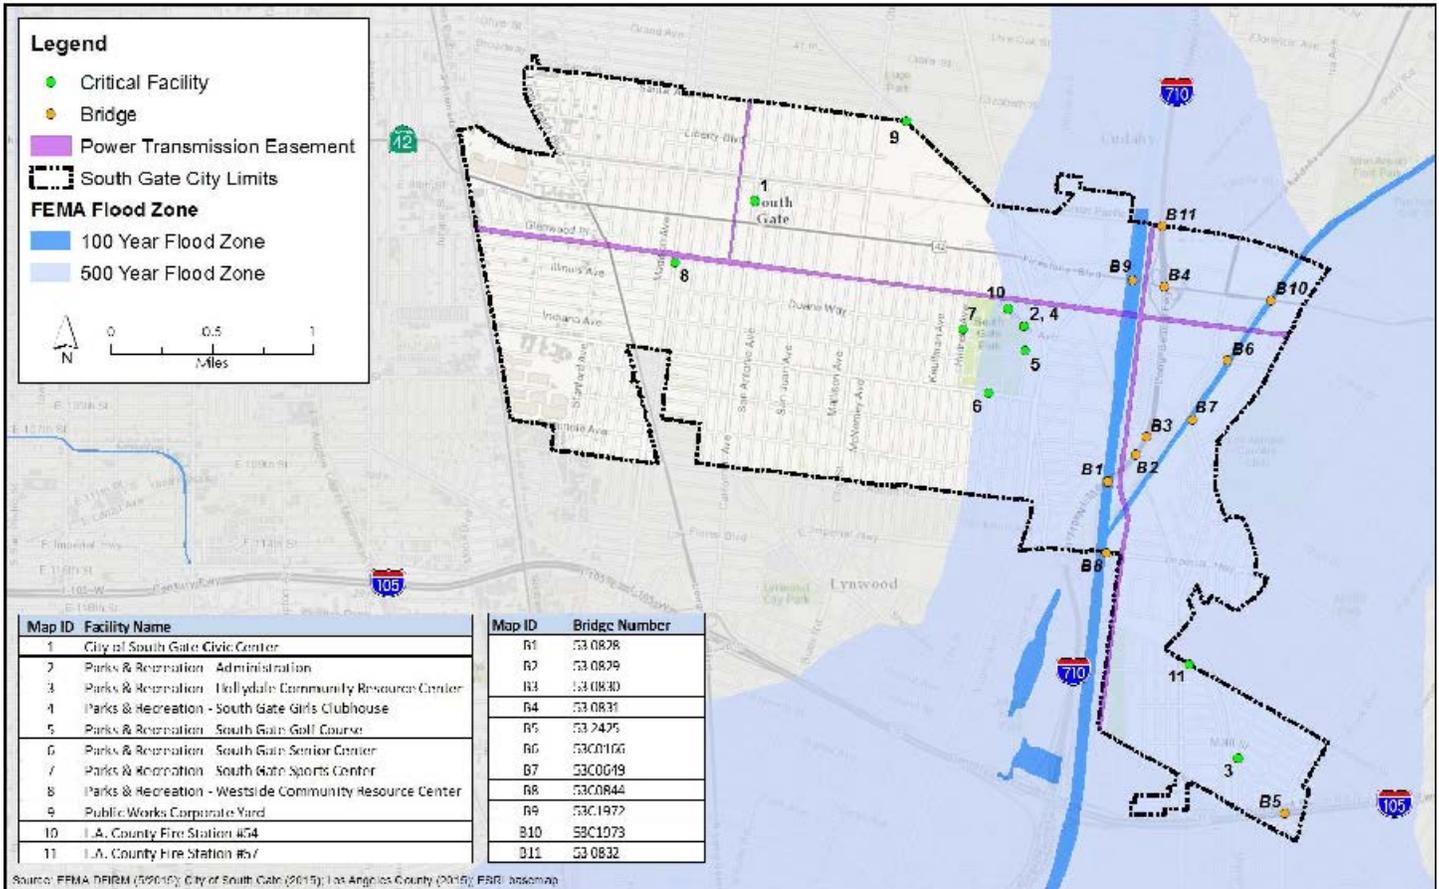

Liquefaction

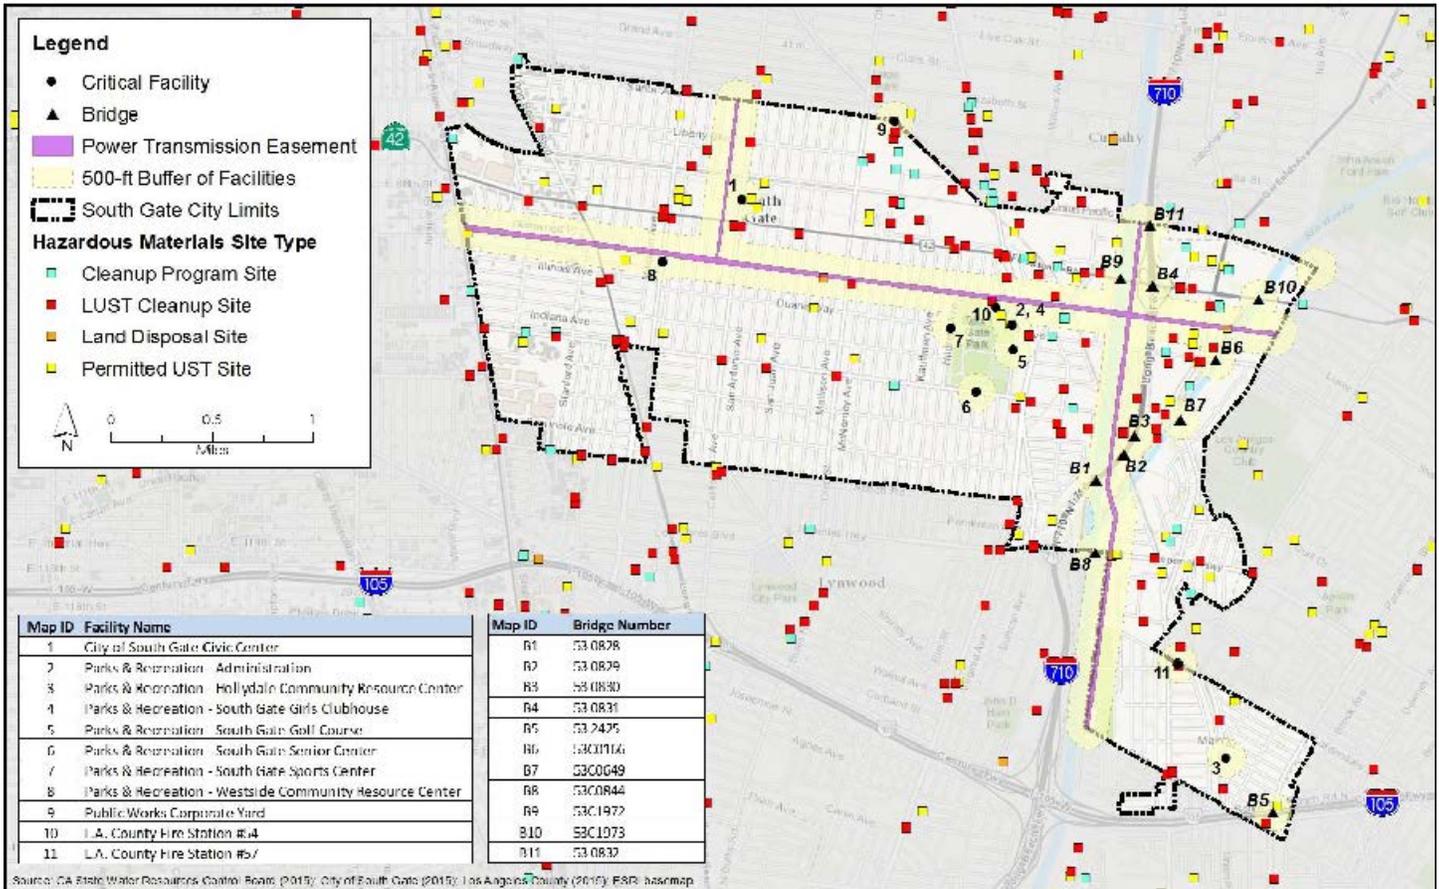

Dam Inundation

Flood Zones

Hazardous Materials

Risk Assessment Findings

Facility	Drought	Seismic Hazards	Extreme Heat	Hazardous Materials (500 ft of a hazardous material site)	Severe Weather	Flood (500 ft of 100 year floodplain)	Disease / Pest Management	Dam Failure
1 City of South Gate Civic Center	Y	Y	Y	Y	Y	N	Y	Y
2 Parks and Recreation - Administration	Y	Y	Y	Y	Y	N	Y	Y
3 Parks and Recreation - Hollydale Community Resource Center	Y	Y	Y	N	Y	N	Y	Y
4 Parks and Recreation - South Gate Girls Clubhouse	Y	Y	Y	Y	Y	N	Y	Y
5 Parks and Recreation - South Gate Golf Course	Y	Y	Y	N	Y	N	Y	Y
6 Parks and Recreation - South Gate Senior Center	Y	Y	Y	N	Y	N	Y	Y
7 Parks and Recreation - South Gate Sports Center	Y	Y	Y	N	Y	N	Y	Y
8 Parks and Recreation - Westside Community Resource Center	Y	Y	Y	N	Y	N	Y	Y
9 Public Works Corporate Yard	Y	Y	Y	Y	Y	N	Y	Y
10 L.A. County Fire Station #55	Y	Y	Y	Y	Y	N	Y	Y
11 L.A. County Fire Station #57	Y	Y	Y	Y	Y	N	Y	Y

Y denotes that the critical facility intersects the hazard layer

N denotes that the critical facility does not intersect the hazard layer

We Make a Difference

Risk Assessment Findings

	Drought	Seismic Hazards	Extreme Heat	Hazardous Materials	Severe Weather	Flood	Disease / Pest Management	Dam Failure
Total Populated Area Affected (Acres)								
Total Number of Residents Affected (% of City population)								
Total Number of Employees Affected (% of City workforce)								

Work in Progress

Draft Mitigation Goals

We Make a Difference

Mitigation Goals

- Will appear at the “goal” level in the Safety Element of the General Plan
- Provides a desired end state that occurs as a result of the plan
- Provides a framework to organize and identify hazard mitigation projects

Mitigation Goals

1. The built environment protects life and property from natural hazard impacts.
2. Municipal and emergency operations are fully functional during natural disasters.
3. Hazard mitigation partnerships exist within the community and throughout the region.
4. The public knows how hazards could affect their property and families.

Mitigation Action Working Session

We Make a Difference

Mitigation Actions

The Plan must identify and analyze a comprehensive range of specific mitigation actions and projects for each jurisdiction being considered to reduce the effects of hazards, with emphasis on new and existing buildings and infrastructure (Code of Federal Regulations §201.6(c)(3)(ii)).

Sample Mitigation Organization

Mitigation Action	Responsible Department	Potential Funding Source(s)	Policy Integration Opportunities	Target Completion Date	Priority
1. Multiple Hazards-Related Actions					
1.1					
1.2					
2. Drought					
2.1					
2.2					
2.3					
Etc.					

Drought Issues

- Water Supply
- Water Demand
- Water Quality
- Landscaping
- Other:

Seismic Hazard Issues

We Make a Difference

Meeting Materials

South Gate Local Hazard Mitigation Plan and Safety Element Update Project Management Team

Meeting 3: November 4, 2015

Included Materials:

- Draft Mitigation Actions
- StapleE Table
- Sign-In Sheet

Mitigation Goals

1. Enhanced protection of life and property from hazard impacts.
2. Municipal and emergency operations are fully functional during disasters.
3. Strengthened partnerships within the community and throughout the region that enhance hazard mitigation, preparation, response, and recovery capabilities.
4. Educated and empowered community members prepare for, mitigate, respond to, and recover from hazards that affect their family and property.

1. Multiple Hazards

1.10 Adopt, implement, and actively enforce the current state building code.

Hazards mitigated: drought, seismic hazards, extreme heat, flood

1.2 Adopt a policy to avoid siting new critical public facilities and infrastructure in areas of elevated vulnerability to flooding and seismic hazards. If siting such facilities in areas of elevated vulnerability is unavoidable, design facilities to remain operable during emergency situations to the greatest extent feasible.

Hazards mitigated: seismic hazards, flood

1.3 Work with utility companies and non-city agencies, including Southern California Edison, Southern California Gas Company, Los Angeles Metro, and telecommunication providers, to harden infrastructure to be more resilient to hazard situations, helping to provide safe service during emergency situations and to quickly fix any service interruptions.

Hazards mitigated: seismic hazards, severe weather, flood

1.4 Expand participation in the NotifyMe program to notify the community in the event of an occurring or imminent hazardous situation, including a need to evacuate. The program should support all commonly spoken languages and can be advertised through multiple methods (door-to-door notifications, phone, television, radio, and online/social media). Coordinate with the Los Angeles County Operational Area for best practices and for consistency with notification systems for surrounding communities.

Hazards mitigated: drought, seismic hazards, extreme heat, hazardous materials, severe weather, flood, disease/pest management, dam failure

Mitigation Action

Priority

1.5 Conduct a comprehensive and ongoing education campaign to improve awareness of hazard threats and ways to reduce risks. The campaign should include mailings, in-person workshops and events, and media notifications (television, radio, online/social media, etc.). The campaign should be designed to reach all members of the community, and should include materials in commonly spoken languages in the community, including English and Spanish.

Hazards mitigated: drought, seismic hazards, extreme heat, hazardous materials, severe weather, flood, disease/pest management, dam failure

1.6 Update and expand the City’s Street Tree Master Plan to cover the following topics:

- Attaining “Tree City USA” designation.
- Tree maintenance including canopy and root maintenance with an emphasis on maintaining buffers between canopies and critical infrastructure.
 - Drought-tolerant and shade-providing tree palettes.
- Tree vulnerability to high winds, with direction to replace vulnerable trees with more resilient species.
 - Mitigating tree pest and disease impacts.
 - Actions and funding sources expand the City’s shade tree stock.
 - Best practices for private property plant selection and tree maintenance.

Hazards mitigated: drought, extreme heat, severe weather

1.7 Coordinate with LA County Public Works to designate Firestone Boulevard as an official County Disaster Route.

Hazards mitigated: seismic hazards, hazardous materials, severe weather, flood, dam failure

Mitigation Action	Priority
<p>1.8 Update all emergency-related planning documents every five years to ensure consistency with state and federal law, best practices, local conditions, and recent science. Integrate the hazards research findings and actions in this Local Hazard Mitigation Plan with all City emergency planning efforts and programs.</p> <p><i>Hazards mitigated: drought, seismic hazards, extreme heat, hazardous materials, severe weather, flood, disease/pest management, dam failure</i></p>	
<p>1.9 Monitor and pursue hazard mitigation funding opportunities.</p> <p><i>Hazards mitigated: drought, seismic hazards, extreme heat, hazardous materials, severe weather, flood, disease/pest management, dam failure</i></p>	

2. Drought

<p>2.1 Adopt and enforce the State Model Water Efficient Landscaping Ordinance.</p>	
<p>2.2 Work with regional partners, including the Los Angeles Unified School District and the Central Basin Water District, to develop a recycled water master plan, with the intention of identifying financially feasible approaches to expanding recycled water infrastructure throughout the city.</p>	
<p>2.3 Amend the Municipal Code to require that water fixtures in new buildings be more efficient than otherwise required by state law.</p>	

Mitigation Action

Priority

2.4 Construct additional water storage facilities.

2.5 Identify and pursue alternative sources of water to support potential shortages of deliveries from the Metropolitan Water District.

2.6 Work with the Golden State Water Company to help ensure a sufficient long-term supply of water to the southeast portion of the community.

2.7 Offer reduced-cost or free water audits for residents and businesses.

2.8 Publicize available rebates and other financial incentives for equipment that reduces water use.

2.9 Amend the Municipal Code to require new nonresidential buildings in a recycled water service area to include dual plumbing for potable and nonpotable water sources.

2.10 As part of discretionary review, encourage new residential buildings in a recycled water service area to include dual plumbing for potable and nonpotable water sources.

Mitigation Action

Priority

2.11 Continue retrofitting publicly landscaped areas with artificial turf or drought-tolerant landscaping.

2.12 Require Urban Water Management Plan updates to consider more severe and long-lasting drought scenarios.

3. Seismic Hazards

3.1 Conduct a seismic study for public buildings and infrastructure and retrofit facilities based on findings and available funding.

3.2 Conduct a seismically vulnerable private building inventory, with a focus on unreinforced masonry and “soft-story” buildings, and develop a prioritized list of recommended phasing for retrofits.

3.3 Adopt a phased ordinance for seismic retrofits to require existing unreinforced buildings to meet current seismic standards. Identify and secure to the extent possible funding to assist property owners with retrofit costs.

3.4 In coordination with state and regional agencies, conduct seismic evaluations of infrastructure owned by other agencies in the city, and identify funding sources to conduct seismic retrofits of vulnerable infrastructure.

Mitigation Action

Priority

3.5 Retrofit City-owned facilities and infrastructure, including water storage tanks, to increase resiliency to seismic hazards and to remain operable immediately after seismic events.

4. Extreme Heat

4.1 On public facilities, conduct energy-efficiency audits, retrofit buildings to increase efficiency, and install solar panels to reduce demand on the electrical grid (increasing its resiliency during heat waves) and to save money and generate municipal revenue.

4.2 Encourage solar panels on new and existing developments by widely publicizing available incentives and financing options, working with local PACE providers to expand outreach to lower-income and non-English-speaking neighborhoods, and participating in programs to reduce the cost of solar panels for residents.

4.3 Work with community groups to identify and secure funding to install energy-efficient air conditioner units for homes without AC access, particularly for homes of lower-income residents, the elderly, and persons with disabilities.

4.4 Require new nonresidential and multifamily development to incorporate high-reflectivity roofing and surface materials, shade trees, shade structures, and/or other infrastructure features to reduce human exposure to extreme heat and to mitigate the urban heat island effect.

Mitigation Action

Priority

4.5 Upon discretionary review for significant remodels, require owners of existing parking lots to install infrastructure features to increase shade and reduce the urban heat island effect.

4.6 Educate all outdoor City workers, including construction, landscaping, maintenance, and recreation staff, about the risks posed by extreme heat and how to reduce them.

4.7 Include extreme heat as a hazard in the City’s Emergency Operations Plan with clear guidelines to:

- Designate public buildings and other community facilities as cooling centers that are easily accessible by all residents in all parts of South Gate, including individuals with limited mobility.
 - Distribute information about cooling centers.
- Establish a temperature threshold as a minimum standard for opening and operating cooling centers.

5. Hazardous Materials

5.1 As part of the development review process, require all hazardous material storage tanks meet or exceed all required and recommended safety standards, including resiliency to natural hazards such as flooding and seismic hazards.

Mitigation Action

Priority

5.2 As part of the development review process, continue to require soil testing for hazardous materials prior to construction activity, and to deny permits if risks from any hazardous materials are not mitigated to a generally safe level.

5.3 Review the zoning ordinance and map and amend allowed uses to prevent siting facilities which may manufacture, store, use, transport, or allow hazardous materials near residential areas or other sensitive uses.

5.4 Consult with Union Pacific Railroad (UPRR) on potential land use issues and safety concerns associated with the railroad rights-of-way in the city. As part of the consultation, UPRR should provide the City with its emergency response and recovery plans for assets located in the city.

6. Flooding

6.1 Monitor the effectiveness of current requirements for new developments to handle stormwater on-site, to the extent possible, through the use of permeable paving and other low-impact development strategies, and update the requirements as needed.

6.2 Provide educational materials to existing property owners about the benefits of installing low-impact development stormwater components.

Mitigation Action

Priority

6.3 Upgrade storm drain infrastructure in areas that frequently pond during strong rains.

6.4 Retrofit public spaces to reduce stormwater runoff, including using permeable paving for sidewalks and parking lots.

6.5 Continue to participate in the National Flood Insurance Program and maintain an effective and up-to-date Flood Plain Management Ordinance.

6.6 Continue and expand the regular cleaning and maintenance of City storm drains to ensure they are functioning at full capacity.

6.7 Continue requiring new development projects to reduce potential and existing flooding hazards as part of the development process.

6.8 Analyze the flood potential associated with elevated reservoir failure in the community.

7. Severe Weather

7.1 Design future key infrastructure to withstand severe weather events beyond minimum code specifications.

7.2 Monitor trees and other vegetation near power lines, and promptly inform utility companies if any vegetation may threaten power service during severe weather and/or requires trimming.

8. Disease and Pest Management

8.1 Coordinate with the Los Angeles County Department of Public Health to ensure South Gate residents have access to affordable flu vaccinations, and that community members are notified about the availability of flu vaccines.

8.2 Work with the Greater Los Angeles County Vector Control District to implement pest management strategies to reduce health risks from disease vectors, to treat/reduce areas of standing water where mosquitoes may breed, and to support additional mosquito mitigation actions as needed.

9. Dam Failure

9.1 Work with the US Army Corps of Engineers and the Metropolitan Water District to support retrofit activities for dams that may pose an inundation risk for South Gate.

Mitigation Actions Discussion

Mitigation actions are the steps the City will take over the next five years in reducing or preventing the risks and hazards identified within this Plan. As part of the development of this Plan, the City used the STAPLE/E Criteria to establish the proposed actions for review by the TAC.

STAPLE/E Review and Selection Criteria

Social
<ul style="list-style-type: none"> • Is the proposed action socially acceptable to the jurisdiction and surrounding community? • Are there equity issues involved that would mean that one segment of the jurisdiction and/or community is treated unfairly? • Will the action cause social disruption?
Technical
<ul style="list-style-type: none"> • Will the proposed action work? • Will it create more problems than it solves? • Does it solve a problem or only a symptom? • Is it the most useful action in light of other jurisdiction goals?
Administrative
<ul style="list-style-type: none"> • Can the jurisdiction implement the action? • Is there someone to coordinate and lead the effort? • Is there sufficient funding, staff, and technical support available? • Are there ongoing administrative requirements that need to be met?
Political
<ul style="list-style-type: none"> • Is the action politically acceptable? • Is there public support both to implement and to maintain the project?
Legal
<ul style="list-style-type: none"> • Is the jurisdiction authorized to implement the proposed action? • Are there legal side effects? Could the activity be construed as a taking? • Will the jurisdiction be liable for action or lack of action? • Will the activity be challenged?
Economic
<ul style="list-style-type: none"> • What are the costs and benefits of this action? • Do the benefits exceed the costs? • Are initial, maintenance, and administrative costs taken into account? • Has funding been secured for the proposed action? If not, what are the potential funding sources (public, non-profit, and private)? • How will this action affect the fiscal capability of the jurisdiction? • What burden will this action place on the tax base or local economy? • What are the budget and revenue effects of this activity? • Does the action contribute to other jurisdiction goals? • What benefits will the action provide?

STAPLE/E Review and Selection Criteria

Environmental

- How will the action affect the environment?
- Will the action need environmental regulatory approvals?
- Will it meet local and state regulatory requirements?
- Are endangered or threatened species likely to be affected?

APPENDIX B – PUBLIC OUTREACH MATERIALS AND OUTCOMES

- 1. LHMP Public Outreach and Engagement Summary**
- 2. Webpages used for Public Outreach and Feedback**
- 3. Planning Commission Agenda Bill (Public Review Period)**

City of South Gate LHMP Public Engagement and Outreach Summary

The City of South Gate conducted several engagement and outreach efforts to introduce the Hazard Mitigation Plan and process to residents and businesses in the city. The following describes the efforts undertaken by South Gate during this process.

Community Event

South Gate hosted a booth at Family Day at South Gate Park on Saturday, October 24, 2015. Community members who visited the booth were able to complete the survey in person. At the booth, posters showed the impacts that various hazards would have on the City's critical infrastructure to raise hazard awareness among community members. The results of the in-person survey are included in the Online Survey section. At the event, 22 surveys were completed in Spanish and 45 were completed in English.

Online Survey

The City developed a separate website for the development of the LHMP (<http://southgatehmp.com/>), which provided an overview of the project, relevant project documents, invitations to upcoming public events, mailing list sign-up, contact information for City staff, and a link to the online survey. The survey, which was posted on September 8, 2015, was available in both Spanish and English. The response period was closed on January 11, 2016, with a total of 143 responses; however, not all questions were answered by all respondents. Below is a summary of the questions and results of the online questionnaire.

How safe is your home?

Are you ready for disasters? Your input is critical to the hazard planning process.

Please take a few minutes to fill out this survey and tell the City your thoughts on the safety of your community.

Take the hazards survey in English

¿Qué tan segura es su casa?

¿Está listo(a) para desastres? Su aporte es crítico para el proceso de planificación sobre peligros.

Por favor tome unos minutos para llenar esta encuesta y decirle a la Ciudad sus pensamientos sobre la seguridad de su comunidad.

Tome la encuesta sobre los peligros en Español

Existing and Potential Hazards

Community members were asked about hazards that had already impacted their homes, as well as which potential hazards were of the most concern to them. Over 90 percent of community members had not been impacted by a disaster at their current residence. Of the nearly 10 percent that had been impacted, earthquakes, diseases or pests, and

extreme heat were the most common hazards. Earthquakes, diseases or pests, and drought were the three potential hazards that caused the most concern for community members. The potential of dam failure was of lowest concern to participants.

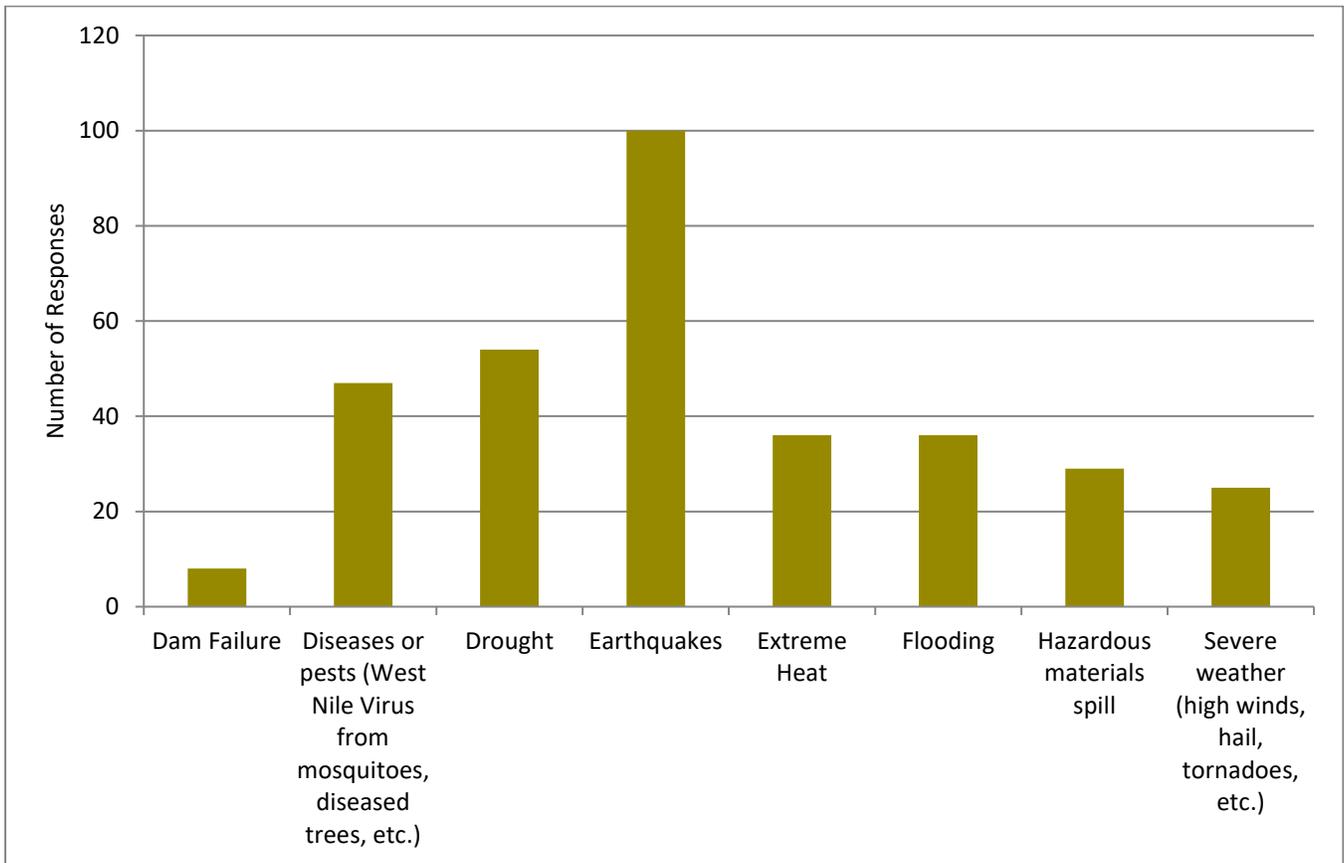

Table B-1. "Have you been impacted by a disaster in your current residence?"

	Total	Percent
Yes	11	9%
No	106	91%

Table B-2. "Select the disasters that you have been impacted by in your current residence"

	Total Reported Impacts
Diseases or pests (West Nile virus from mosquitoes, diseased trees, etc.)	3
Drought	2
Earthquakes	6
Extreme Heat	3
Flooding	2

Figure B-1. Hazards of most concern to your neighborhood

Personal Preparedness

In addition to identifying hazards of concern, participants were asked to explain individual steps they have taken toward increasing their individual preparedness for disaster. This understanding, while limited to the survey sample, can indicate the ability of the community to respond and recover from disaster. When asked about homeowners insurance, nearly 50 percent felt that their insurance was adequate to cover the hazards that could impact their home. Of community members who rented their homes, over three-fourths did not have renters insurance. While 24 percent of renters and homeowners surveyed had flood insurance, over 75 percent did not. Nearly half of the City is located within the 500-year flood zone, meaning that there is a 2 percent chance of a large flood occurring in that area each year.

Table B-3. "If you are a homeowner, do you have adequate homeowners insurance to cover the hazards that could impact your home?"

	Total	Percentage
Yes, my insurance coverage should be adequate.	44	47%
No, I don't believe my insurance coverage would be adequate for a major disaster.	15	16%
Unsure.	28	30%
I do not have an insurance policy.	7	7%

Table B-4. "If you rent your residence, do you have renters insurance?"

	Total	Percent
Yes	12	23%
No	40	77%

Table B-5. "Do you have flood insurance for your home?"

	Total	Percent
Yes	27	24%
No	85	76%

Most respondents have at least some of the basic supplies recommended to protect their well-being in the 72-hour period immediately after a disaster. Of the 18 items recommended, only six were owned by over half of the 143 respondents. The most commonly held item, a can opener, was only owned by 67 percent of participating community members. The least common item, a secondary source of heat, was possessed by only 12 community members.

Table B-6. "If a severe hazard event occurred today such that all services were cut off from your home (power, gas, water, sewer) and you were unable to leave or access a store for 72 hours, which of these items do you have readily available?"

	Total	Percent
Potable water (3 gallons per person)	86	60%
Cooking and eating utensils	80	56%
Can opener	96	67%
Canned/nonperishable foods (ready to eat)	87	61%
Gas grill/camping stove	58	41%
Extra medications	54	38%
First aid kit/supplies	73	51%
Portable AM/FM radio (solar powered, hand crank, or batteries)	48	34%
Handheld "walkie-talkie" radios (with batteries)	22	15%
Important family photos/documentation in a water and fireproof container	40	28%
Extra clothes and shoes	61	43%
Blanket(s)/sleeping bags	67	47%
Cash	45	31%
Flashlight (with batteries)	80	56%
Gasoline	15	10%
Telephone (with batteries)	44	31%
Pet supplies	38	27%
Secondary source of heat	12	8%

Community Preparedness

A connected community builds resiliency by providing neighbor-to-neighbor assistance on a short-term basis until emergency response personnel or supplies arrive. Identifying and understanding the needs of vulnerable neighbors (including the elderly, very, young, or disabled), allows community members to adequately assist those around them. In the survey, the City found that less than a third of respondents felt as though they were familiar with the special needs of their neighbors in the event of a disaster.

Table B-7. "Are you familiar with the special needs of your neighbors in the event of a disaster situation? (Special needs may include limited mobility, severe medical conditions, memory impairments.)"

	Total	Percent
Yes	38	29%
No	93	71%

Another way to improve community preparedness is to encourage community members be trained as part of South Gate’s Community Emergency Response Team (CERT). CERT volunteers are trained in basic emergency response skills, including search and rescue, team organization, and evacuation safety procedures. During an emergency, community members who are CERT-trained can care for and protect others and assist and supplement emergency response professionals. Only about one-fifth of respondents were CERT-trained.

Table B-8. "Are you a trained member of your Community Emergency Response Team (CERT)?"

	Total	Percent
Yes	25	19%
No, but I would like to learn more about CERT.	72	55%
No, I am not interested in being a trained CERT member.	33	25%

Finally, community members were asked to identify which recommendations they would like to see the City pursue to improve resiliency and community engagement for future emergencies. Of the 143 participants in the survey, over half favored increased notifications and communication surrounding emergencies.

Table B-9. "How can the City help you become more prepared for a disaster?"

	Total	Percent
Provide effective emergency notifications and communication.	73	51%
Provide training and education to residents and business owners on how to reduce future damage.	66	46%
Provide community outreach regarding emergency preparedness.	61	43%
Create awareness of special needs and vulnerable populations.	53	37%

City of South Gate Webpage:

The screenshot shows the City of South Gate website. At the top, there is a navigation bar with the city logo, a search bar, and a 'Sign In' button. Below the navigation bar is a horizontal menu with categories: Government, Community, Services, Business, and How Do I... The main content area features a left sidebar with a 'Local Hazard Mitigation Plan' link highlighted. The central content area contains the title 'Local Hazard Mitigation Plan' and three paragraphs of text. The right sidebar includes 'Contact Us' information for Alvie Betancourt, the Planning Division address and phone number, and office hours for Monday through Thursday (7-11:30 a.m. to 1-5 p.m.) and Friday (closed). A 'Staff Directory' link is also present.

Local Hazard Mitigation Plan

The City of South Gate is developing a Local Hazard Mitigation Plan (LHMP) and a General Plan Safety Element. Together, the two documents provide the City's framework to mitigate local risks from natural hazards and plan for a resilient future. City staff is working with a consultant, a stakeholder advisory committee, and the public to develop up-to-date plans that protect life and property in the community.

Input from residents, businesses, and the local community is an important part of plan development. The City is hosting an online survey to obtain the public's thoughts on natural disasters in the community. In addition, members of the public can stop by booths hosted by the City at several upcoming community events throughout South Gate. At these booths, project information will be available and input from the community will be invited.

The City will continue to share regular updates on this effort and opportunities for input. Draft plans are anticipated by the end of this year.

Fore more information, please visit to the LHMP webpage at southgatehmp.com.

LHMP Project Website:

City of South Gate
Local Hazard Mitigation Plan and Safety Element Update

Project Overview

In July 2015, the City of South Gate kicked off the development of a Local Hazard Mitigation Plan (LHMP) and an update to the General Plan Safety Element. Together, the two documents provide the City's framework to mitigate local risks to natural hazards and plan for a resilient future. The City will seek FEMA certification of the LHMP to maximize the City's eligibility for future grant funding for hazard mitigation.

Plan preparation is occurring during summer and fall 2015. To guide plan development, the City is conducting public outreach and convening a stakeholder advisory group. Opportunities for involvement and project updates will be available on this website. Final action on the project will occur with the City Council's adoption of both documents in early 2016.

For questions or comments, please contact the City's Project Manager, Alvie Betancourt.

Upcoming Events

Family Day, October 24. The City of South Gate will host a project booth at Family Day. Come and provide input and learn more about the project. More information on the event is available [online](#).

The City will offer additional opportunities for public input during fall 2015. Check back here for more information.

Project Documents

No project documents available at this time.

Project Background

The City of South Gate seeks to proactively minimize the potential impacts of natural hazards in the community. Earthquakes, flooding, and windstorms are some of the key hazards that threaten the community. The LHMP and the Safety Element work together to provide a framework for analyzing, preparing, and mitigating risks from these hazards.

The **Safety Element** will serve as an adopted element of the General Plan, forming part of the City's blueprint for future growth and development. The Safety Element is long-term plan with a 20-year horizon. The California Government Code establishes the requirements for this mandatory part of the General Plan. The element will include policies to mitigate hazards through land use, design measures, and programs. As a part of the General Plan, the Safety Element will provide direction that the City will implement through the Zoning Ordinance and other mechanisms. The element will consolidate and reorganize issues currently contained in the Green City Element and the Public Facilities Element of the General Plan.

The **Local Hazard Mitigation Plan** is a five-year strategic plan that also seeks to identify and mitigate natural hazards. The LHMP is distinct from the Safety Element, directly responding to the requirements of the federal Disaster Mitigation Act (DMA) of 2005. The DMA establishes requirements to identify hazards, evaluate mitigations, and prioritize strategies to mitigate hazard risks. Completion of the LHMP and achievement of certification by FEMA provides the City with access to two competitive FEMA grant programs: the Hazard Mitigation Grant Program (HMGP) and the Pre-Disaster Mitigation Program (PDM). To maintain eligibility for FEMA funding, the City must update the LHMP a minimum of once every five years.

By integrating the LHMP with the Safety Element, the City will also achieve eligibility for additional post-disaster funding from the State of California. The City will integrate the LHMP by annexing or appending it to the Safety Element. The Safety Element will include a framework of goals, objectives, and policies. The LHMP will rely on this policy framework, providing related mitigation actions and strategies to implement the Safety Element.

Planning Commission Agenda Bill:

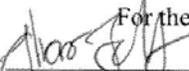

ITEM NO. 3

City of South Gate PLANNING COMMISSION

AGENDA BILL

For the Regular Meeting of: April 5, 2016

Senior Planner:

Alvie Betancourt

Director Community Development:

Joe Perez

SUBJECT: SAFETY ELEMENT AND LOCAL HAZARD MITIGATION PLAN - UPDATE

RECOMMENDED MOTION: Receive and File

NOTICING PROCEDURES: None. This is a discussion and preview of the upcoming Safety Element and Local Hazard Mitigation Plans. No decisions will be requested of the Planning Commission at this time.

REPORT SUMMARY: The Planning Division is in the process of updating the General Plan Safety Element and the Local Hazard Mitigation Plan (LHMP). City staff, with the support of the consultant team (Michael Baker International), has conducted three steering committee meetings this fiscal year with Finance, Police, Public Works, Parks and Recreation and County Fire participants. Furthermore, an interactive website where residents were able to contribute to the data gathering process was made available. We also conducted Federal Emergency Management Agency (FEMA) mandated public outreach by hosting a booth at the October 24, 2015 Family Day event at South Gate Regional Park; over 60 participants providing feedback toward both efforts and took part in survey and data collection efforts. Next steps include producing draft documents for staff review followed by public dissemination and submittal to FEMA for certification.

The Safety Element is a mandatory element of the General Plan required by Senate Bill (SB) 351, an act that became law on February 23, 1971. The purpose of the General Plan Safety Element is to identify natural or human activity-related hazards that exist in South Gate and to define policy objectives and implementation actions to address them. Some naturally occurring hazards may be unavoidable, but the potential impact on South Gate can be reduced through advance planning and preparation. The Safety Element addresses geologic, seismic, flood, and fire hazards, as well as hazards created by human activity such as hazardous materials and incidents that call for emergency protection. The Safety Element describes the City's efforts to prepare for and respond to emergencies. Public safety planning generally focuses on how an agency or community members will prepare for, respond to, or recover from a disaster. Hazard mitigation planning focuses on how the impact of a disaster might be lessened. The Local Hazard Mitigation Plan includes an assessment of the City's risk related to natural hazard impacts such as drought, seismic events, extreme heat, and flooding. The LHMP also includes a comprehensive set of actions the City will complete to mitigate, or reduce, the impacts of those hazards.

1

The LHMP is distinct from the Safety Element, directly responding to the requirements of the federal Disaster Mitigation Act (DMA) of 2005. The DMA establishes requirements to identify hazards, evaluate mitigations, and prioritize strategies to mitigate hazard risks. Completion of the LHMP and achievement of certification by FEMA provides the City with access to two competitive FEMA grant programs: the Hazard Mitigation Grant Program (HMGP) and the Pre-Disaster Mitigation Program (PDM). To maintain eligibility for FEMA funding, the City must update the LHMP a minimum of once every five years.

By integrating the LHMP with the Safety Element, the City will achieve eligibility for additional post-disaster funding from the State of California. The City will integrate the LHMP by annexing or appending it to the Safety Element. The Safety Element will include a framework of goals, objectives, and policies. The LHMP will rely on this policy framework, providing related mitigation actions and strategies to implement the Safety Element.

ATTACHMENTS: None at this time.

APPENDIX C – MASTER FACILITIES LIST
